PHYSICS, CHEMISTRY AND TECHNOLOGY

VOLUME VII

INTERNATIONAL CRITICAL TABLES OF NUMERICAL DATA, PHYSICS, CHEMISTRY AND TECHNOLOGY

Prepared under the Auspices of the International
Research Council and the National
Academy of Sciences

BY THE
NATIONAL RESEARCH COUNCIL
OF THE
UNITED STATES OF AMERICA

EDITOR-IN-CHIEF

EDWARD W. WASHBURN, PH.D.
*Chief of the Division of Chemistry, National Bureau of
Standards*

ASSOCIATE EDITORS

CLARENCE J. WEST, PH.D.
*Director, Research Information Service
National Research Council*

N. ERNEST DORSEY, PH.D.
Physicist, National Bureau of Standards

ASSISTANT EDITOR

MARTHA D. RING, B.S.
Washington, D. C.

VOLUME VII

198907

PUBLISHED FOR THE
NATIONAL RESEARCH COUNCIL

BY THE
McGRAW-HILL BOOK COMPANY

BOARD OF TRUSTEES

GEORGE P. ADAMSON, Chairman, Director of Research, The General Chemical Company.
HARRISON E. HOWE, Secretary (to May 21, 1922), Editor, Industrial and Engineering Chemistry.
WILLIAM M. CORSE, Secretary (since May 21, 1922), Vice-President and General Manager, Research Service, Inc.
EDWARD B. CRAFT, (until March, 1927), Executive Vice-President, Bell Telephone Laboratories, Inc.
HUGH K. MOORE, D.Sc., Technical Director, Brown Company.
CHARLES L. REESE, Ph.D., Sc.D., Consultant, E. I. du Pont de Nemours & Co.; Past President, American Institute of Chemical Engineers.

REPRESENTING THE AMERICAN CHEMICAL SOCIETY

JULIUS STIEGLITZ, Ph.D., D.Sc., Chem.D., Professor and Chairman, Department of Chemistry, University of Chicago; Past President, The American Chemical Society.

REPRESENTING THE AMERICAN PHYSICAL SOCIETY

EDWARD P. HYDE, Ph.D., (until June, 1923), Director of Research (until July 1, 1923), National Lamp Works of General Electric Company.
F. B. JEWETT, Ph.D., (September, 1923 to January, 1925), American Telephone and Telegraph Company.
MICHAEL I. PUPIN, Ph.D., Sc.D., (January, 1925 to November, 1927), Professor of Electro-Mechanics, Columbia University.

BOARD OF EDITORS

EDWARD W. WASHBURN, Chairman.
GEORGE K. BURGESS, D.Sc., D.Eng., Director, National Bureau of Standards; Chairman, National Research Council.
SAUL DUSHMAN, Ph.D., Physicist, General Electric Company.
JOHN JOHNSTON, D.Sc., Director, Department of Research and Technology, United States Steel Corporation.
S. C. LIND, Ph.D., Director, School of Chemistry, University of Minnesota, Minneapolis, Minn.
CHARLES E. MENDENHALL, Professor of Physics, University of Wisconsin, Madison, Wis.
RICHARD B. MOORE, D.Sc., Dean of Science and Head, Department of Chemistry, Purdue University, Lafayette, Ind.

♥

CORRESPONDING EDITORS AND ADVISORY COMMITTEES

AUSTRIA

PROF. DR. RUDOLF WEGSCHEIDER, University of Vienna, Vienna, Austria.

BELGIUM (and its dependencies)

PROF. DR. JEAN TIMMERMANS, University of Brussels (Solbosch), Brussels, Belgium.

PROF. DR. M. M. STRAUVEN (until November, 1924), École des Mines, Mons, Belgium.

THE BRITISH EMPIRE (excluding British North America)

G. W. C. KAYE, O.B.E., M.A., D.Sc., National Physical Laboratory, Teddington, England.

Advisory Committee: Sir Robert Robertson, K.B.E., F.R.S.; W. Rosenhain, D.Sc., F.R.S.; Prof. A. W. Porter, D.Sc., F.R.S.; T. E. Stanton, C.B.E., D.Sc., F.R.S.; J. E. Sears, C.B.E., M.A.; A. C. Egerton, M.A.; W. F. Higgins, M.Sc. (Secretary).

BRITISH NORTH AMERICA

PROF. OTTO MAASS, McGill University, Montreal, Canada.

Advisory Committee: J. W. Bain, R. J. Durley, G. S. Whitby.

DENMARK (Norway and Sweden)

PROF. DR. NIELS BJERRUM, Royal Veterinary and Agricultural College, Copenhagen, Denmark

Advisory Committee: Martin Knudsen, Carl Jacobsen.

FRANCE (Spain and Portugal)

DR. CHARLES MARIE, Maître de Conférences adjoint à la Faculté des Sciences, Paris, France.

Advisory Committee: C. Moureu, Membre de l'Institut, Professeur au Collège de France, Paris, France; A. Fabry, Professeur à la Faculté des Sciences, Paris, France; A. Guillet, Directeur de l'École Centrale des Arts et Manufactures, Paris, France.

HOLLAND (and its dependencies)

DR. W. J. VAN HETEREN, Chemist, Royal Mint, Utrecht, Holland.

Advisory Committee: Dr. E. Cohen, Professor of Chemistry, University of Utrecht; Dr. C. A. Crommelin, Assistant Director, Physical Laboratory, University of Leiden; H. Baucke, Chemical Engineer, Director of the Laboratory, Koning and Bienfait, Amsterdam.

ITALY (and its dependencies)

PROF. DR. NICOLA PARRAVANO, Director of the Chemical Institute of the Royal University of Rome, Rome, Italy.

Advisory Committee: Prof. Ugo Bordoni, R. Scuola di Ingegneria di Roma, Rome, Italy; Prof. Francesco Gior-dani, R. Politecnico di Napoli, Naples, Italy; Prof. Luigi Rolla, R. Università di Firenze, Florence, Italy.

JAPAN (and Eastern Asia)

PROF. KÔTARÔ HONDA, Tôhoku University, Sendai, Japan.

SWITZERLAND

PROF. A. BERTHOUD, University of Neuchâtel, Neuchâtel, Switzerland.

Advisory Committee: Prof. Ch. E. Guye, Geneva; Prof. H. Rupe, Basel; Prof. F. Schüle, Zürich.

SYMBOLS

Symbols and formulae that occur in a single table are explained there.

- d* Density.
F Formula-weight in accordance with the printed formula.
g As subscript, *g* indicates that the quantity pertains to the gas.
H As subscript, *H* indicates that the quantity pertains to hydrogen, H_2 .
M Molecular weight.
n Index of refraction referred to a vacuum.
p Pressure.
 λ Wave-length.
 λ_μ Value of λ when the unit is $1\mu = 10^4 \text{ \AA}$; $\lambda_\mu = 10^{-4}\lambda_\text{\AA}$.

SYMBOLE

Symbole und Formeln, die in einer einzelnen Tabelle vorkommen, sind dort erklärt.

- d* Dichte.
F Formelgewicht entsprechend der gedruckten Formel.
g Als untergeschriebene Index bedeutet *g*, dass sich die Grösse auf ein Gas bezieht.
H Als untergeschriebene Index bedeutet *H*, dass sich die Grösse auf Wasserstoff, H_2 bezieht.
M Molekulargewicht.
n Brechungsindex auf das Vakuum bezogen.
p Druck.
 λ Wellenlänge.
 λ_μ Wert von λ , wenn als Einheit $1\mu = 10^4 \text{ \AA}$ gilt; $\lambda_\mu = 10^{-4}\lambda_\text{\AA}$.

SYMBOLES

Les symboles et formules qui se présentent dans une seule table sont expliqués à cette place.

- d* Densité.
F Formule-poids en accord avec la formule imprimée.
g Comme souscrit, *g* indique que la quantité se rapporte à un gaz.
H Comme souscrit, *H* indique que la quantité se rapporte à l'hydrogène, H_2 .
M Poids moléculaire.
n Indice de réfraction par rapport au vide.
p Pression.
 λ Longueur d'onde.
 λ_μ Valeur de λ lorsque l'unité est $1\mu = 10^4 \text{ \AA}$; $\lambda_\mu = 10^{-4}\lambda_\text{\AA}$.

SIMBOLI

I simboli e le formule che si incontrano in ogni singola tabella sono ivi spiegate.

- d* Densità.
F Formula-peso corrispondente alla formula stampata.
g Quando viene posto sotto, *g* indica che la quantità si riferisce allo stato gassoso.
H Quando viene posto sotto, *H* indica che la quantità si riferisce all'idrogeno, H_2 .
M Peso molecolare.
n Indice di rifrazione riferito al vuoto.
p Pressione.
 λ Lunghezza d'onda.
 λ_μ Valore di λ quando l'unità è $1\mu = 10^4 \text{ \AA}$; $\lambda_\mu = 10^{-4}\lambda_\text{\AA}$.

The indices for solids and liquids are given for the actual temperatures at which they were determined; those for gases and vapors have in most cases been reduced to 0°C and 760 mm of Hg by some one of several, not always concordant, formulae. As values obtained previous to 1898 have been collected by Dufet (²³), such values are, in general, omitted from this section if more recent data of equal or superior accuracy are available; a discussion of them will usually be found in the recent papers.

The variation of the refractivity with temperature and pressure has been given special consideration in the case of air; for other gases and vapors the available data are included with the refractivities in Table 4, if there is an indication that the ideal gas laws do not apply.

REFRACTIVITY OF AIR

Except as the contrary is stated, the following data refer to dry air containing the normal amount (0.03%) of CO_2 . Doubling this amount of CO_2 will increase *n* by less than 1 in 10^7 (⁵⁴).

TABLE 1.—REFRACTIVITY OF DRY AIR

For dispersion formulae, see Table 2; unit of $\lambda = 1 \text{ \AA}$; of *p* = 1 mm of Hg; temperature = *t*, $^\circ\text{C}$

(4) Range: $\lambda = 2218$ to 8999, *p* = 760 mm (⁵⁴). Observations were made at constant *t*, and gave directly the values of *n* for pressures near 760; these were reduced to *p* = 760 on the assumption that over this short range $(n - 1)/p$ is independent of *p*. For smoothed values, see Table 3.

Variation of Refractivity of Air with Temperature, Pressure and Humidity

Temperature.— $(n-1)_0 = (n-1)_t(1 + \alpha t)$. Meggers and Peters (54) find $\alpha = 0.00367 + \frac{0.000003}{\lambda^2}$; Koch (35) and Statescu

(75) used $\alpha = 0.003670$; Pèrard (59) used $\alpha = 0.003716$; Cuthbertson (14), Howell (29), and most of the other workers have used $\alpha = 0.003663 = \frac{1}{2}73$. At $t = -189$ to -188°C , Ayres (3) obtained the following values, agreeing with those of Scheel (68):

λ		507	735	914 mm of Hg
5461 Å	$(n-1)10^6 =$	654.3	954.1	1189.9
5780 Å	$(n-1)10^6 =$	653.3	951.1	1186.4

Pressure.—For small ranges in p , t constant, $(n-1)/p$ may be regarded as a constant. Opinions differ regarding the effect of relatively great changes. Mathews (53) concludes that $(n-1)/p$ is constant over the range $p = 26$ to $p = 760$ mm, but many consider that Mascart's relation, $(n-1)/p = K(1 + \gamma p)$, fits the observations better; the following values have been used for γ , the unit of p being 1 mm of Hg:

λ	5 461	5 461	5 462
p	0 to 760	0 to 760	760 to 7 600
$10^8\gamma$	357 ± 39	667 ± 87	51 ± 5
Lit.	(62)	(81)	(58)
λ	4 359	4 000 to 6 500	5 000 to 86 000
p	760 to 7 600	near 760	0 to 760
$10^8\gamma$	53 ± 5	240	70
Lit.	(58)	(59)	(35)

For the range $\lambda = 4050$ to 5090 Å, $p = 30$ to 100 atm., $t = 9$ to 14°C , it has been found (70, 71, 73) that, whatever the pressure,

$$\frac{(n-1)\lambda}{(n-1)_{5461}} = 0.98086 \left\{ 1 + \frac{0.0056376}{\lambda^2} + \frac{54.01(10)^{-6}}{\lambda^4} \right\}$$

For variation with p at $t = -188^\circ\text{C}$, see preceding text.

Humidity.—If n_d and n_m = index for dry air and for air in which the partial pressure of water vapor is m mm of Hg, then Lorenz (43) concludes that $n_d = n_m + \frac{41m(10)^{-6}}{760}$.

TABLE 2.—DISPERSION FORMULAE FOR DRY AIR

$$\lambda_{\mu} = 10^{-4}\lambda_A, \text{ unit of } \lambda_A = 1 \text{ \AA}$$

For the formula $(n-1)10^6 = \beta/(\mu - \lambda_{\mu}^{-2})$, Cuthbertson (14) finds $\beta = 51\,626$, $\mu = 179.17$; for the Cauchy formula $(n-1)10^6 = A + B\lambda_{\mu}^{-2} + C\lambda_{\mu}^{-4}$, the following values have been found, those of (54) being the best. Temperature is t , °C; pressure = 760 mm of Hg, except as noted.

t , °C	A	B	C	$1000B/A$	$10^6C/A$	Lit.
0	287.566	1.3412	0.03777	4.6641	131.35	(54)
15	272.643	1.2288	0.03555	4.5070	130.39	(54)
30	258.972	1.2259	0.02576	4.7337	99.47	(54)
0	287.987*	1.804*	0	6.264*	0	(65)
0	288.02	1.482	0.0309	5.145	107.3	(59)
11				5.638†	54.01†	(70, 71, 73)

* Freed of CO₂.

† For pressures between 30 and 100 atm., $t = 12^\circ\text{C}$, $4050 \text{ \AA} < \lambda < 5090 \text{ \AA}$.

TABLE 3.—CORRECTIONS FOR CONVERTING WAVE-LENGTHS AND THEIR RECIPROALS IN AIR AT 15°C AND 760 MM OF HG TO THEIR VALUES IN A VACUUM (54)

If λ_a , λ_v = values in air and in vacuum, respectively, then $\lambda_v = \lambda_a + \delta_\lambda$ and $1/\lambda_a = 1/\lambda_v + \delta_\nu$, where δ_λ and δ_ν have the values given in the table. The values of $(n-1)$ are those computed by means of the equation $(n-1)10^6 = 272.643 + 1.2288\lambda_{\mu}^{-2} + 0.03555\lambda_{\mu}^{-4}$ which was derived from the observations in Table 1, section A. Unit of λ and $\delta_\lambda = 1 \text{ \AA}$; of $\delta_\nu = 1 \text{ cm}^{-1} = 10^8 \text{ \AA}^{-1}$.

TABLE 4.—REFRACTIVITY OF GASES AND VAPORS

For dispersion formulae, see Table 5

Order: Elementary substances, pure compounds, mixtures. The formula used for reducing the observations is indicated, if

known, by *I*, *II*, or *III*: *I*, $r_0 = r \cdot \frac{760(1+\alpha t)}{p(1+\gamma p)}$, unless other values are given, $\gamma = 0$ and $\alpha = \frac{1}{2}73$; *II*, $r_0 = r d_0/d$; *III*, $r_0 = r[(F/d)_0]_{t,p} \times [(d/M)_H]_{0,760}$; $r = (n-1)10^6$. If the gas is ideal and diatomic, and if $\gamma = 0$ and $\alpha = \frac{1}{2}73 (= 0.003663)$, all three formulae give the same value, and $r_0 = 10^6(n-1)_{0,760}$. $K \equiv r_0/p$. Unit of $\lambda = 1 \text{ \AA}$; of $p = 1 \text{ mm of Hg}$; temperature $= t, ^\circ\text{C}$.

* At 21°C , $\lambda = 5461 \text{ \AA}$, and d between 700 and 2000, d_0 = density at 0°C and 760 mm, $\frac{n^2-1}{n^2+2} \cdot \frac{d_0}{d}$ ($= 199.7 \times 10^{-6}$) is more nearly constant than either $(n^2-1)/d$ or $(n-1)/d$ (57).

† If computed by van der Waals's equation with $a = 126\,070$, $b = 1.325$, then both $(n-1)/d$ and $(n^2-1)/(n^2+2)d$ are constant within 2%.

‡ $\Delta = (n_{5461} - n_{5780}) \times 10^6$, where 5780 is the mean λ of the yellow lines of Hg; p is expressed in cm of Hg. At -191.6°C the coefficient of p is nearly 7 times as great at -190.6°C .

63 000	333.7	6 709	447.07	For $p < 760 \text{ mm}$			
70 000	333.7	67 094	480.38	$K = 0.5519$			
		86 784	457.92	$10^6 \gamma = 10.63 \pm 0.55$			

* Also corrected for factor A in $[(PV)_{760} - (PV)]/(PV) = A(P - 760)$, using $A = 10.2 \times 10^{-6}$ per mm of Hg.

† Derived from same observations as preceding data.

‡ At $34^\circ\text{C}, \lambda = 5461 \text{ \AA}, 0.10 < d < 0.74, \left(\frac{n^2 + 2}{n^2 - 1}\right)d = 6.581(1 + 0.0172 \times d^2)$.

§ $(n^2 - 1)/(n^2 + 2)d$ is more nearly constant than either $(n^2 - 1)/d$ or $(n - 1)/d$; d_0 = density at 0°C and 760 mm of Hg.

Mixtures

x = vol. % of second substance (or mixture); subscripts $_{\text{mix}}$, $_1$, and $_2$, refer to the mixture and to first and second substance, respectively. The refractivities are said to be additive if $(n - 1)_{\text{mix}} = (n - 1)_1 + x\{(n - 1)_2 - (n - 1)_1\}$. Reduced refractivity and density of the mixture are defined as $(n - 1)_r = (n - 1) \times \frac{760}{p} \cdot \frac{T}{273}$ and $d_r = d \cdot \frac{760}{p} \cdot \frac{T}{273}$.

H ₂ + CO ₂	5780	Additive	(78)
H ₂ + (He + Ne)....	5780	Additive	(78)

* 272°K < T < 343°K; 55 mm < p < 238 mm.

TABLE 5.—DISPERSION FORMULAE FOR GASES AND VAPORS

$\lambda_\mu = 10^{-4}\lambda_A$; unit of $\lambda_A = 1 \text{ \AA}$. The table is divided into 4 sections, each, except *D*, devoted to a single type of formula. In general, the data refer to 0°C and 760 mm of Hg. Certain of the parameters depend upon the formula used in reducing the observations to 0° and 760 mm; these formulae are indicated by *I*, *II*, *III* (see Table 4) placed at head of section or in column (2).

<i>A. (n - 1)10⁶ = A + Bλ_μ⁻² + Cλ_μ⁻⁴ (Formula I)</i>

CO ₂				6.787§	-6.14§	(70, 71, 73)
Air.....	See Table 2					

* Those authors who use only *A* and *B*, find values of *B* varying from 0.90 to 1.00; see (14).

† Author uses a fourth term, $D\lambda_\mu^{-6}$; $D = 70.51 \times 10^{-6}$, $D/A = 5.181 \times 10^{-7}$.

‡ For all pressures between 25 and 70 atmospheres, $t = 20^\circ\text{C}$, $4050 \text{ \AA} < \lambda < 5090 \text{ \AA}$.

§ For all pressures between 20 and 47 atmospheres, $t = 12^\circ\text{C}$, $4050 \text{ \AA} < \lambda < 5090 \text{ \AA}$.

$$B. (n - 1)10^6 = \beta' / (\mu' - \lambda_\mu^{-2}) + \beta'' / (\mu'' - \lambda_\mu^{-2})$$

In most cases, β'' and $\mu'' = 0$; when β'' and μ'' are not zero, their values are written below those of β' and μ' , with which they are connected by {.

REFRACTIVITY OF SELECTED SOLIDS AND LIQUIDS

CHARLES CHÉNEVEAU

Scope.—The substances included in this section are those pure solids and liquids which have been studied with special care on account of their practical importance or of some unusual behavior. All are listed in Table 1.

Sujet traité.—Les substances mentionnées dans cette section, sont les solides et liquides purs qui ont été étudiés avec un soin spécial, soit à cause de leur importance pratique, soit à cause de leur façon de se comporter inaccoutumée. Elles sont toutes mentionnées dans la Table 1.

Umfang.—Die in diesem Abschnitt enthaltenen reinen festen und flüssigen Stoffe sind solche, welche zufolge ihrer praktischen Bedeutung oder ihres ungewöhnlichen Verhaltens mit besonderer Sorgfalt studiert worden sind. Alle sind in der Tafel 1 angeführt.

Sostanze incluse.—Le sostanze incluse in questo capitolo sono quei solidi e liquidi puri che sono stati studiati con cura speciale sia per la loro importanza pratica o per il loro anormale comportamento. Essi sono riuniti nella Tabella 1.

CONTENTS	MATIÈRES	INHALTSVERZEICHNIS	INDICE	PAGE
Selected solids and liquids.	Solides et liquides choisis.	Ausgewählte feste und flüssige Stoffe.	Alcuni solidi e liquidi.	12
Water.	Eau.	Wasser.	Acqua.	13
Remarkable cubic crystals.	Cristaux cubiques remarquables.	Besondere kubische Kristalle.	Cristalli cubici speciali. . . .	13
Remarkable organic liquids.	Liquides organiques remarquables.	Besondere organische Flüssigkeiten.	Liquidi organici speciali. . . .	14
Dyes.	Matières colorantes.	Farbstoffe.	Sostanze coloranti.	15

Units.—Unit of $\lambda = 1\mu = 10^{-4}\text{ Å} = 10^{-4}\text{ cm}$; of $t = 1^\circ\text{C}$; of $p = 1\text{ atm.}$; of $d = \text{g/cm}^3$

TABLE 1.—REFRACTIVITY OF PURE SOLIDS AND LIQUIDS: SELECTED SUBSTANCES

$N_D[n_D]$ = index of refraction relative to vacuum [to air at 1 atm. and same temperature as the substance] for the Fraunhofer line D ($\lambda = 0.5893\mu$); similarly for n_C , n_F , etc.; $(10)^{-4}\Delta_{C-D} = (n_C - n_D)/(\lambda_C - \lambda_D)$, etc.; $(10)^{-6}\Delta_{tD} = (n_{t''} - n_{t'})/(t'' - t')$ for $\lambda = 0.5893(D)$; Δ_λ = mean value of $dn/d\lambda$ throughout visible spectrum; $dn/dt = A_t(10)^{-6}$; $dN/dp = A_p(10)^{-6}$; C = crystal of cubic system; d = density; f = solidified from fusion; s = solid. Temperature (t) is 20°C , except as noted; $\lambda_C - \lambda_D = 0.0670\mu$, $\lambda_D - \lambda_F = 0.1032\mu$, $\lambda_F - \lambda_{G'} = 0.0520\mu$.

||| If $t' = 16.5^\circ$ and $t'' = 77.6^\circ$, $\Delta_{tC} = -45.4$, $\Delta_{tD} = -46.1$; $\Delta_{tF} = -47.8$ (37).

¶¶ Isotopic Pb(NO₃)₂ at 20°C . Pb = 207.20, $n_D = 1.7815$; Urano-Pb = 206.41, $n_D = 1.7814$ (47).

TABLE 2.—REFRACTIVITY OF WATER (H₂O)

Variation with wave-length (λ), with temperature (t) and pressure (p), and with source. $N[n]$ = index of refraction with reference to vacuum [to air at 1 atm. and same temperature as the water]; met. r. = metallic reflection.

Variation with λ : Except as noted, $t = 20^\circ\text{C}$. At 18°C , $n^2 = -0.013414\lambda^2 + 1.76148 + \frac{0.0065438}{\lambda^2 - (0.11512)^2}$, if $0.224\mu < \lambda < 1.256\mu$.

REFRACTIVITY OF BIREFRINGENT CRYSTALS

H. E. MERWIN

These tables have to do primarily with variations of refractive index with wave-length and temperature. For refractive indices at a single wave-length, for 2V or 2E, for orientations, etc., see Vol. I, p. 166, 279, 320; and (56, 81.1, 115, 116.1, 235.1). For dispersion of birefringence, see (59-62); for refractivity of metallic crystals, see Vol. V, p. 248; for isotropic substances, see Vol. I, p. 165 (cf. p. 106), Vol. VII, p. 12, and for elementary substances, see Vol. VII, p. 1.

Ces tables concernent principalement les variations de l'indice de réfraction avec la longueur d'onde et avec la température. Pour les indices de réfraction concernant une seule longueur d'onde, pour 2V ou 2E, pour les orientations, etc., voir Vol. I, p. 166, 279, 320; et (56, 81.1, 115, 116.1, 235.1). Pour la dispersion de la biréfringence, voir (59-62); pour le pouvoir réfractif des cristaux métalliques, voir Vol. V, p. 248; pour les substances isotropiques, voir Vol. I, p. 165 (cf. p. 106), Vol. VII, p. 12, et pour les éléments, voir Vol. VII, p. 1.

Diese Tafeln behandeln vor allem die Änderung des Brechungsindex mit der Wellenlänge und der Temperatur. Für die Brechungsindex einzelner Wellenlängen, für 2V oder 2E, Orientierung, etc., siehe Bd. I, S. 166, 279, 320; ferner (56, 81.1, 115, 116.1, 235.1). Für die Dispersion der Doppelbrechung, siehe (59-62); für das Brechungsvermögen von Metallkristallen, siehe Bd. V, S. 248; für isotropischen Stoffe, siehe Bd. I, S. 165 (cf. S. 106), Bd. VII, S. 12, und für Elemente, siehe Bd. VII, p. 1.

Queste tabelle si riferiscono principalmente alle variazioni dell'indice di birifrangenza in funzione della lunghezza d'onda e della temperatura. Per gli indici di rifrazione ad una sola lunghezza d'onda, per 2V e 2E, per le orientazioni, ecc., vedi Vol. I, p. 166, 279, 320; e (56, 81.1, 115, 116.1, 235.1). Per la dispersione della birifrangenza, vedi (59-62); per la refrattività dei cristalli metallici, vedi Vol. V, p. 248; per le sostanze isotropiche, vedi Vol. I, p. 165 (cf. p. 106), Vol. VII, p. 12, e per le elementi, vedi Vol. VII, p. 1.

CONTENTS

List of birefringent minerals.

Accurate dispersions.

Refractivity of birefringent crystals.

Dispersion curves.

Refractivity and 2V of sulfates, selenates, and chromates of the type $R''R_2(SO_4)_2 \cdot 6H_2O$.

Wave-lengths corresponding to various symbols.

Conversion of temperature coefficients of refraction from vacuum to air.

MATIÈRES

Liste des minéraux biréfringents.

Dispersion précises.

Pouvoir réfractif des cristaux biréfringents.

Courbes de dispersion.

Pouvoir réfractif et 2V des sulfates, sélénates et chromates du type $R''R_2(SO_4)_2 \cdot 6H_2O$.

Longueurs d'onde correspondant aux divers symboles.

Conversion des coefficients de température de réfraction du vide à l'air.

INHALTSVERZEICHNIS

Register doppelbrechender Kristalle.

Genaue Dispersion.

Brechungsvermögen doppelbrechender Kristalle.

Dispersions-Kurve.

Brechungsvermögen und 2V von Sulfaten, Selenaten und Chromaten der Type $R''R_2(SO_4)_2 \cdot 6H_2O$.

Wellenlänge entsprechend verschiedenen Symbolen.

Umrechnung des Temperaturkoeffizienten der Brechung im Vakuum auf Luft.

The measurements for quartz (12), epsomite (122), and calcite (142) extend into the ultra-violet; and those for quartz and calcite into the infra-red also. (Numbers refer to Table 1.)

TABLE 1.—REFRACTION OF BIREFRINGENT CRYSTALS

See also Figs. 1 and 2

Standard arrangement (Vol. III, p. viii); substances containing C but no element of key-number greater than 16 are given in section II (p. 29). For more exact wave-lengths corresponding to symbols in the λ-column, see Table 3; alphabetical list of minerals, p. 16.

Definitions.— $10^{-4}\delta\omega_D = \omega_\lambda - \omega_D$, etc.; $10^{-6}\tau_\omega = d\omega/dt$, etc.; also $10^{-6}\tau_\omega = (\omega_{t''} - \omega_{t'})/(t'' - t')$, etc., if observations have been made at only two temperatures. The two classes of τ are not distinguished; both are reduced to vacuum (see Table 4). For uniaxial crystals, ω = index of refraction for ordinary ray, ϵ = that for extraordinary ray; if $\omega < \epsilon$, the crystal is optically positive. For biaxial crystals, α , β , γ = principal indices of refraction, $\alpha < \beta < \gamma$. All indices of refraction are referred to air at the temperature of the crystal, usually room temperatures, except when expressed with τ thus: τ_ω , etc. $2V$ = interior optic

axial angle; $\tan^2 V = \left[\frac{1}{\alpha^2} - \frac{1}{\beta^2} \right] \pm 1$, the sign of the exponent being

so chosen as to make $\tan^2 V < 1$; if this sign is +, then the crystal and V are positive, in the contrary case they are negative. For rapid computation of V , see Wright's tables (236.2).

Range of Variation.—The observed range is indicated in one of the following ways, e.g.: $\omega_D = 2.534$ to 2.564 , $\omega_D = 2.534(64)$, $\omega_D = \begin{cases} 2.534 \\ 2.564 \end{cases}$

Accuracy.—If final figure is probably inaccurate by 2 to 5 units, it is printed in small type. Tabulated dispersions (δ) probably do not depart from a smooth curve by more than 1.5 units in final figure unless that is printed in small type.

Data.—Observers have often placed more stress upon variations for a particular specimen than upon actual values and the purity of the material. Data for materials probably pure are indicated by P , those nearly pure by p . Unit of $\lambda = 10 \text{ \AA} = 1 \text{ m}\mu = 10^{-7} \text{ cm}$. Temperature = t , °C.

I. A-3-Table: Inorganic Substances; Standard Arrangement; v. Vol. III, p. viii

1. H₂O, Ice (59) P ; cf. Fig. 1

λ	ω	α	β	γ
589D	$\omega = 1.3090$, $\epsilon = 1.3104$, $t = -3^\circ$	2.010	2.101	2.3340
471He		2.004	2.093	2.3239
486F		1.999	2.087	2.3172
492He		1.996	2.084	2.3111
502He		1.991	2.077+	2.3021
508Cd		1.987	2.073	2.2959
535Tl		1.976	2.058	2.2757
561Pb		1.967	2.049	2.2600
588He		1.958	2.038	2.2463
589D		1.957	2.037+	2.2454
644Cd		1.944	2.023	2.2243
656C		1.942	2.019+	2.2203
668He		1.940	2.017+	2.2168
671Li		1.939+	2.017	2.2159
768A'		1.926	2.001	2.1936

$t = -3^\circ$ and -65° ; $\delta\epsilon_D = 1.01\delta\omega_D$; $\tau_\omega = \tau_\epsilon = -3.8$.

2. S* (Rhombic form) (14, 60, 176, 179); P ; cf. Fig. 1

λ	α	β	γ
434G'	2.042	2.139	2.3914
436Hg	2.040	2.137	2.3878
447He	2.029	2.123	2.3682
468Cd	2.012	2.103	2.3384

For $8^\circ < t < 30^\circ$ and $\lambda = 535\text{Tl}$, $\tau_\alpha = -17$, $\tau_\beta = -23$, $\tau_\gamma = -28$; for $\lambda = 671\text{Li}$, $\tau_\alpha = -17$, $\tau_\beta = -21+$, $\tau_\gamma = -25+$ (179). $+2V_D = 69^\circ$ (41, 179); $(2V_F - 2V_C) < \pm 0.5^\circ$ (133).

* Data read from curves.

Fig. 2.—Dispersion curves for substances (rutile ϵ excepted) which are red, orange, or yellow when in the form of a fine dry powder. The lines (A' to D) of constant wave-length form a pencil diverging from a point on the line C , the abscissae are the values of the difference ($\text{Index}_\lambda - \text{Index}_C$), where $\lambda = A', D$, etc. Selenium is glassy, and cuprite (cuprite in cut) is isotropic.

3. Se, (Hexagonal form) P
By transmission, $\omega_{680m\mu} = 3.0$,
($\epsilon - \omega$) $_{680m\mu} = 0.17$ (133)
By reflection (134.1, 184.1, 186)

λ	n_1^*	n_2^*
300	3.3	2.3
400	3.9	3.0
500	4.1	3.1
600	4.1	3.1
700	4.0	3.1

* Plane of incidence and electric vector \parallel principal axis of crystal for n_1 , \perp for n_2 . By comparison with transmission data, $n_2 = \omega$, $n_1 = \epsilon(?)$.

3.1. Te, (Hexagonal form)
(134.1, 222.1); P

λ	n_1^*	n_2^*
300	1.9	1.5
400	2.7	2.4
500	3.0	2.6
600	3.0	2.5
650	2.6	2.1

* Electric vector \parallel optic axis for n_1 , \perp for n_2 . By comparison with Se, $n_2 = \omega$, $n_1 = \epsilon(?)$.

3.2. NH_4ClO_4 (252); P

λ	α	β	γ
589D	1.4818	1.4833	1.4881
λ	$\delta\beta_D^*$	λ	$\delta\beta_D^*$
434G'	86	656C	-20
$\delta\alpha_D = 0.98 \delta\beta_D$; $\delta\gamma_D = 1.03 \times 45'$			

* Curves, see 231.1.

4. NH_4NO_3 (133) P ; cf. Fig. 1

λ	α	β	γ
405Hg			1.6766
447He	1.4194	1.634+	1.6621
502He	1.4163+	1.623	1.6494
588He	1.4130	1.611+	1.6370
668He	1.4110+	1.605	1.6296

5. $(\text{NH}_4)_2\text{SO}_4$, Mascagnite
(208), δ (133); P

λ	α	β	γ
589D	1.5209	1.5230	1.5330
λ	$\delta\alpha_D$	λ	$\delta\alpha_D$
405Hg	138+	546Hg	21+
434G'	105	656C	-25
486F	59+	706He	-40+

$\delta\beta_D = 1.01\delta\alpha_D$; $\delta\gamma_D = 1.05 \times \delta\alpha_D$; $+2V_D = 52^\circ$.

5.—(Continued)

For $15^\circ < t < 80^\circ$, $\tau_\alpha = -4.9$, $\tau_\beta = -4.0$, $\tau_\gamma = -6.2$; all colors.

6. $(\text{NH}_4)_3\text{H}(\text{SO}_4)_2$ (68); P

λ	α	β	γ
535Tl	1.504	1.509	1.535
589D	1.496	1.502	1.528

$-2V$	$78^\circ +$	$77^\circ +$	77°
	$76^\circ +$		

* By extrapolation from impure specimens, and for synthetic material (123, 236.1).

160. $(\text{CaAl}_2\text{Si}_2\text{O}_8)_y + (\text{NaAlSi}_3\text{O}_8)_x$, Feldspars; see 229

161. $\text{Ca}_2\text{Al}_3\text{HSi}_3\text{O}_{13}$, Clinzoisite (epidote) (77, 185, 244); for Fe-epidote, see 163

λ	α	β	γ
589D	1.714	1.717	1.719

λ	$\delta\beta_D$
486F <i>ca.</i>	90
527E <i>ca.</i>	50
656C <i>ca.</i>	-40

Approximately $\delta\alpha_D = \delta\beta_D = \delta\gamma_D$.

162. $\text{Ca}_4\text{Al}_6\text{Si}_6\text{O}_{26}(\text{CO}_3)$ *ca.*, Meionite (22, 28, 88, 117.1, 237)

λ	$\delta\omega_D$
486F	71
535Tl	31
656C	-30
671Li	-35
700	-45

With 589D, $\omega = 1.61+$, $\epsilon = \omega - 0.046$. $\delta\epsilon_D = 0.89\delta\omega_D$. Same values except of birefringence (?), for specimens containing SO_4 . Scapolite is intermediate between Meionite and Marialite (221).

163. $\text{Ca}_2(\text{Al}, \text{Fe})_3\text{HSi}_3\text{O}_{13}$, Epidote (77); specimen contains 37 atoms Fe to 63 atoms Al

λ	α	β	γ
589D	1.729	1.763	1.780

163.—(Continued)

Approximately $\delta\alpha_D = \delta\beta_D = \delta\gamma_D$ and probably increases with increase of Fe/Al, as do the refractivity and birefringence; *cf.* 161.

164. $\text{Ce}(\text{La}, \text{etc.})(\text{CO}_3)_3 \cdot \text{CaF}_2$ *ca.* Parisite (158)

(A feldspar; others are: Albite (218), Andesine (229), Anorthite (159), Labradorite (229), Microcline (261.1), Oligoclase (229).

Orthoclase occurs in two optical orientations, crystal axis *a* is always near the α -axis, but crystal axis *b* is the γ -axis in normal orthoclase (adularia, etc.) and the β -axis in abnormal orthoclase. Here *b* and *c*, respectively, denote the γ and β indices for normal, and the β and γ indices for abnormal orthoclase. As temperature is increased, normal orthoclase ultimately becomes abnormal.

II. C-Table; Organic Compounds; C-Arrangement; v. Vol.

III, p. viii

CH₂I₂, Methylene iodide, liquid; for comparison only *see* Fig. 1

CH₃AsO₃, Methylarsenic acid (53)

λ	α	β	γ
535Tl	1.5105	1.5490	1.5499
589D	1.5074	1.5457	1.5463
671Li	1.5037	1.5415	1.5417

C₂H₄N₄, Dicyandiamide (86)

λ	α	β	γ
486F	1.5321	1.5579	1.870
589D	1.5212	1.5498	1.847
656C	1.5177	1.5454	1.835

C₂H₅NO₂, Glycocol (117)

λ	α	β	γ
486F	1.5065	1.6256	1.6758
687B	1.4985	1.6115	1.6588

C₂H₈N₂O₄·H₂O, Ammonium oxalate (133)

λ	α	β	γ
405Hg	1.4503	1.5658	1.6212
436Hg	1.4472	1.5606	1.6139
502He	1.4427	1.5528	1.6033
546Hg	1.4403	1.5489	1.5983
588He	1.4387	1.5458	1.5944
668He	1.4362	1.5417	1.5889
706He			1.5868

C₃H₆N₆, Melamine (86)

λ	α	β	γ
486F	1.4992	1.7656	1.9020
589D	1.4906	1.7429	1.8721
656C	1.4876	1.7340	1.8608

C₃H₆N₆O₆, Trimethylenetri-nitroamine (197)

λ	α	β	γ
447He	1.597	1.620+	1.624+
471He	1.592+	1.614+	1.618+
486F	1.589+	1.611+	1.615+
535Tl	1.582+	1.603	1.608
589D	1.5775	1.5966	1.6015
656C	1.573	1.591+	1.597

C₃H₁₂N₆O₆, Guanidine carbonate (18, 120)

λ	ω	ϵ
535Tl	1.5035*	1.4930*
589D	1.5000*	1.4895*
589D	1.4990	1.4962
671Li	1.4954*	1.4849*

* Recalculated from (18).

C₄H₂O₃, Maleic anhydride (138)

λ	α	β	γ
589D	1.4429	1.4781	1.6384
671Li	1.4397	1.4745	1.6313

C₄H₄INO₂, Iodosuccinimide (219)

λ	ω	ϵ
486F	1.7129	1.6909
535Tl	1.7033	1.6797
589D	1.6965	1.6726
656C	1.6903	1.6652
671Li	1.6896	1.6645

C₄H₆O₄, Succinic acid (86)

λ	α	β	γ
486F	1.4558	1.5410	1.6204
589D	1.4503	1.5338	1.6100
656C	1.4486	1.5315	1.6062

C₄H₆O₄, Dimethyl oxalate (86)

λ	α	β	γ
486F	1.4267	1.470+	1.563
589D	1.4177	1.461+	1.552
656C	1.416	1.460+	1.550

C₄H₈Cl₂O₂, Erythritoldichlorohydrin (52)

λ	ω	ϵ
535Tl	1.5568	1.5175
589D	1.5535	1.5149
671Li	1.5497	1.5119

C₄H₈N₂O₃·H₂O, Asparagine (178)

λ	α	β	γ
527E ca.	1.5513	1.5845	1.6238
589D	1.5476	1.5800	1.6190
687B ca.	1.5438	1.5752	1.6139

C₄H₈NO₆, Ammonium hydro-gen tartrate (200)

λ	α	β	γ
486F	1.528	1.569	1.600
589D	1.519	1.561	1.591
656C	1.517	1.558	1.586

C₅H₁₀O₅, *l*- α -Arabinose (234)

λ	α	β	γ
589D	1.551	1.567	1.571

Dispersion same as for *d*- α -Lyxose.

C₅H₁₀O₅, *d*- β -Arabinose (234)

λ	α	β	γ
589D	1.555	1.573	1.577

Dispersion is ca. 15% > that for *d*- α -Lyxose.

C₅H₁₀O₅, *d*- α -Lyxose (234)

λ	α	β	γ
450	1.541	1.550	1.559
500	1.537	1.546	1.554+
589D	1.532	1.541	1.549
650	1.530	1.538+	1.547

C₅H₁₀O₅, *d*- α -Xylose (234)

λ	α	β	γ
589D	1.517	1.544	1.546

Dispersion is ca. 10% < that for *d*- α -Lyxose.

C₅H₆ClNO₂, Picolinic acid hydrochloride (116)

λ	α	β	γ
535Tl	1.4514	1.713	1.764
589D	1.4482	1.705	1.754
671Li	1.4438	1.695	1.741

C₆H₆N₄O₇, Ammonium picrate

λ	α	β	γ
486	1.543		
513	1.528	1.960	2.004
528	1.522	1.944	1.961
541	1.518	1.933*	1.933*
588	1.508+	1.872	1.908
668	1.499	1.81+	1.880
Lit.	(15)	(129)	(129)

* β and γ interchange orientations.

C₆H₆O₂, *o*-Dihydroxybenzene (86)

λ	α	β	γ
486F	1.6204	1.6314	1.7536
589D	1.6044	1.6139	1.7336
656C	1.5980	1.6073	1.7255

C₆H₆O₂, Resorcinol (86)

λ	α	β	γ
486F	1.5901	1.6372	1.6449
589D	1.5781	1.6197	1.6273
656C	1.5725	1.6132	1.6208

C₆H₆O₂,

C₆H₁₂O₆·H₂O, Rhamnose (55)

λ	α	β	γ
434G'	1.53379	1.54222	1.54446
486F	1.52892	1.53724	1.53960

TABLE 2.—REFRACTION OF PURE SULFATES, SELENATES AND CHROMATES OF THE TYPE $R'R_2(SO_4)_2 \cdot 6H_2O$

The data relating to dispersion (in air at room temperature) have been determined from curves that take account of the similarities of all these sulfates and selenates. In most cases, approximate measurements (204) have been made for $\lambda = G' = 434m\mu$, but, excepting the TI-salts, more accurate values can be derived from the relations: $(\beta_{G'} - \beta_F) = 0.76(\beta_F - \beta_C)$ for the sulfates, and $(\beta_{G'} - \beta_F) = 3.79(\beta_F - \beta_C)$ for the selenates. For a few of the salts, more complete dispersion data ($\delta\beta_D$, etc.) are given at the end of the Table, where $10^{-4}\delta\beta_D = \beta_\lambda - \beta_D$. The apparent uncertainties in the less accurate values of $2V_C$ and of $2(V_F - V_C)$ are indicated by a ($=7'$), b ($=12'$), c ($=25'$), and d ($=60'$). $10^{-6}\tau\beta_D = d\beta_D/dt$, if $10^\circ < t < 80^\circ$; $(\alpha_F - \alpha_C) = (\beta_F - \beta_C + \Delta\alpha)$; $(\gamma_F - \gamma_C) = (\beta_F - \beta_C + \Delta\gamma)$. For more exact wave-lengths corresponding to symbols for λ , see Table 3, p. 30. Unit of $\Delta\alpha$, $\Delta\gamma$, $(\beta_D - \beta_C)$, and $(\beta_F - \beta_D) = 10^{-4}$; of $\lambda = 10 \text{ \AA} = 1m\mu = 10^{-7} \text{ cm}$.

* For Fe(NH₄)₂(SO₄)₂·6H₂O, $\tau_{\alpha F} = -2.2$, $\tau_{\beta F} = -2.8$, $\tau_{\gamma F} = -3.2$; and for red, $\tau_{\alpha} = -2.8$, $\tau_{\beta} = -4.0$, $\tau_{\gamma} = -3.6$.

† For Mg(NH₄)₂(SO₄)₂·6H₂O, values of τ apply to all colors.

‡ For Ni(NH₄)₂(SO₄)₂·6H₂O, strong absorption of γ at $\lambda = 405$ and 706 .

§ For Zn(NH₄)₂(SeO₄)₂·6H₂O, $\tau_{\alpha F} = -1+$, $\tau_{\alpha Li} = -2+$.

|| Recalculated.

¶ For Mg(NH₄)₂(SeO₄)₂·6H₂O, values of τ apply if $486F < \lambda < 671Li$.

** Accuracy of $2V$, and $2(V_F - V_C)$ not estimated.

TABLE 4.—CONVERSION OF TEMPERATURE COEFFICIENTS OF REFRACTION FROM VACUUM TO AIR

Assuming that the air and crystal are at the same temperature, and writing $10^{-5}\tau = d(\text{index})/d\tau$, and $\Delta = \tau_{\text{air}} - \tau_{\text{vac}}$, Δ is directly proportional to the pressure of the air, and increases by 2% in going from the red ($\lambda = 650m\mu$) to the violet ($\lambda = 400m\mu$). The tabulated values refer to $\lambda = 650m\mu$ and air at a pressure of 760 mm of Hg.

REFRACTIVITY OF PURE ORGANIC LIQUIDS

ALFRED L. DIXON AND CLARENCE J. WEST

(The numerical data for the following compounds, which were selected from the literature by Alfred L. Dixon and Dr. Roger Adams, were compiled by Clarence J. West.)

The following table gives values for the density and the refractive indices for the $H_\alpha(\alpha)$, D(He values are *), $H_\beta(\beta)$ and $H_\gamma(\gamma)$ lines for the more important carbon compounds. In the literature column, the citation from which the values were selected is followed by a †. Values of wave-lengths represented by symbols are: H_α (α), 656.3m μ ; H_β (β), 486.15m μ ; H_γ (γ), 434.06m μ ; D(Na), 589.3m μ ; He, 587.6m μ .

C-Table; The C-Arrangement (v. Vol. III. p. viii) (Metallo-organic compounds at end of table)

Formula	Name	t , °C	d_4^t	α	D	β	γ	Lit.

Every substance appearing in this section is entered in Table 1 in its proper place, as determined by its formula, in standard (resp. \mathcal{C} -) arrangement. It appears as a B-component in the section devoted to aqueous solutions, or as an A-component in other sections. At that place reference by serial number is given to each other place at which it occurs. Each system in the dispersion table (Table 5) has the same serial number as in Table 1 or 2.

In most cases observers have aimed at relative, and not absolute accuracy, hence such a tabulation as that here given subjects the data to a purpose never intended by the observer. A number of gross errors have been detected; some seem to be certainly errors in transcription and some of these have been corrected; the source of others cannot be determined. A number of such errors, one as great as 0.1% of n , occur in the data of Krollpfeiffer (⁷⁶); he seems to have much over-estimated the accuracy of his data.

Chaque substance mentionnée dans cette section est située dans la Table 1 à sa propre place, ainsi qu'elle est déterminée par sa formule dans l'arrangement type (resp. arrangement \mathcal{C}). Elle est considérée comme un constituant B dans la section se rapportant aux solutions aqueuses, ou comme un constituant A dans les autres sections. À cette place il est donné une référence par un nombre de série se rapportant à chaque autre place à laquelle la substance se présente. Dans la table de dispersion (Table 5) chaque système a le même nombre de série que dans la Table 1 ou 2.

Dans la plupart des cas, les expérimentateurs ont eu pour but d'obtenir une précision relative et non absolue, par conséquent un arrangement en tableaux tel qu'il est donné ici, soumet les données à un but qui n'a jamais été visé par l'expérimentateur. Un certain nombre d'erreurs grossières a été décelé; quelques unes paraissent être certainement des erreurs de transcriptions et certaines de celles-ci ont été corrigées; la source des autres n'a pu être déterminée. Un certain nombre de telles erreurs, dont l'une atteint 0,1% de n , se trouve dans les données de Krollpfeiffer (⁷⁶); cet auteur semble avoir beaucoup surestimé la précision de ses données.

Eine jede in diesem Teil enthaltene Substanz befindet sich in Tafel 1 an der Stelle, welche ihr durch die Formel in der Standard- (bezw. \mathcal{C} -) Anordnung zukommt. Die Substanz ist entweder als B-Komponente in dem Abschnitt der wässrigen Lösungen enthalten, oder sie befindet sich als A-Komponente in den anderen Abschnitten. An dieser Stelle wird durch eine Serienzahl der Hinweis, zu jeder anderen Stelle gegeben, wo sie vorhanden ist. Jedes System in der Dispersions-Tafel 5 hat dieselbe Serienzahl wie in der Tafel 1 oder 2.

In vielen Fällen haben die Beobachter eine relative statt eine absolute Genauigkeit angestrebt. Daher werft ein Tafel, wie der hier zusammengestellte, die Daten einem Zwecke unter, der von dem Beobachter nie beabsichtigt war. Eine Anzahl grober Fehler sind aufgefunden worden. Einige davon sind sicher Übertragungsfehler und einige davon sind korrigiert; die Quelle anderer konnte nicht aufgefunden werden. Solche Fehler bis 0,1% in n kommen in den Daten von Krollpfeiffer (⁷⁶) vor, es scheint als ob dieser Autor die Genauigkeit seiner Zahlen sehr überschätzt hätte.

Le sostanze comprese in questo capitolo sono situate nella Tabella 1 al posto che ad esse spetta, secondo la formula scritta col sistema tipo (o col sistema \mathcal{C}). Esse figurano come componente B nella sezione dedicata alle soluzioni acquose o come componente A nelle altre sezioni. In quel posto è indicato a mezzo del numero di serie quali sono gli altri posti dove ciascuna sostanza è nominata. Ogni sistema ha nella Tabella 5 lo stesso numero di serie che nella Tabella 1 o 2.

Nel maggior numero dei casi gli osservatori si sono prefissi di raggiungere un'accuratezza relativa e non già assoluta; l'ordinamento dei dati nella maniera qui adoperata li fa servire perciò ad uno scopo non previsto dagli sperimentatori. Sono stati rilevati parecchi errori notevoli, alcuni sembra che debbono essere certamente attribuiti alla trascrizione, e sono stati corretti. L'origine degli altri non si è potuta stabilire. Parecchi di tali errori—uno arriva fino al 0,1% di n —si trovano fra i valori di Krollpfeiffer (⁷⁶); sembra che questi abbia apprezzato molto al di là del giusto l'accuratezza dei suoi valori.

SYMBOLS

a, b, c	Coefficients in $n = a + b(10)^{-3} (\% B) + c(10)^{-6} (\% B)^2$.
g B/kg A	Number of grams of B per 1000 grams of A in a binary mixture.
M_A/M_B	Molecular dilution of B = number of moles of A per mole of B in a binary mixture.
$d_t^{t''}$	Specific gravity at $t''^\circ\text{C}$ with reference to water at $t^\circ\text{C}$.
eq.	Equilibrium.
Isom.	Isomer.
k	$n = n_0 + k(\text{g B/l soln.})(10)^{-4}$.
max.	Maximum value of.
$M_B/\text{l soln.}$	Number of gram moles of B per liter of mixture.
n	Index of refraction.
n_λ^t	Index of refraction at $t^\circ\text{C}$, for light of wave-length λ .
N	Number of gram-equivalents of B per liter of mixture.
% B	Number of grams of B per 100 grams of mixture = Wt. % of B.
V_A	Unit volumes of constituent A.
Vol. % B, t°	Volume of pure B, at $t^\circ\text{C}$, per 100 cm^3 of mixture, at $t^\circ\text{C}$ = Vol. % of B.
g B/l soln.	Number of grams of B per liter of mixture.
α	$dn/dt = -\alpha \times 10^{-4}$.
δ_d	$1000d_d^t = 1000 + \delta_d$.
δ_n	$1000n_d^t = 1333 + \delta_n$.
ϵ	Accuracy of n is $\pm 0.0001\epsilon$.
λ	Wave-length of light.
(λ_1^1)	$(n_{\lambda_2} - n_{\lambda_1}) = (\lambda_1^1) \times 10^{-5}$. The λ 's may be indicated by the Fraunhofer letter notation.
#	Indicates a place for which no digit is given; e.g., 5# indicates that the value is nearer 50 than 40 or 60, but the second digit is not known.

SYMBOLE

a, b, c,	Koeffizient von $n = a + b(10)^{-3} (\% B) + c(10)^{-6} (\% B)^2$.
g B/kg A	Anzahl von Gramm des Stoffes B auf 1000 g von A in einer binären Mischung.
M_A/M_B	Molekulare Verdünnung von B = Zahl der Mole von A auf Mole von B in der binären Mischung.
$d_t^{t''}$	Spezifisches Gewicht bei $t''^\circ\text{C}$ auf Wasser bei $t^\circ\text{C}$ bezogen.
eq.	Gleichgewicht.
Isom.	Isomer.
k	$n = n_0 + k(\text{g B/l soln.})(10)^{-4}$.
max.	Maximaler Wert von.
$M_B/\text{l soln.}$	Zahl der Gramm-Mole von B pro Liter der Mischung.
n	Brechungsindex.
n_λ^t	Brechungsindex bei $t^\circ\text{C}$, für Licht von der Wellenlänge λ .
N	Zahl der Gramm-Äquivalente von B pro Liter der Mischung.
% B	Zahl der Gramme von B pro 100 g der Mischung = Gewichts % von B.
V_A	Einheitsvolumen des Bestandteiles A.
Vol. % B, t°	Volumen des reinen B bei $t^\circ\text{C}$ pro 100 cm^3 der Mischung bei $t^\circ\text{C}$ = Vol. % von B.
g B/l soln.	Zahl der Gramme von B pro Liter der Mischung.
α	$dn/dt = -\alpha \times 10^{-4}$.

SYMBOLES

a, b, c	Coefficients dans $n = a + b(10)^{-3} (\% B) + c(10)^{-6} (\% B)^2$.
g B/kg A	Nombre de grammes de B pour 1000 grammes de A dans le mélange binaire.
M_A/M_B	Dilution moléculaire de B = nombre de molécules de A pour une molécule de B dans le mélange binaire.
$d_t^{t''}$	Poids spécifique à $t''^\circ\text{C}$ par rapport à de l'eau à $t^\circ\text{C}$.
eq.	Équilibre.
Isom.	Isomère.
k	$n = n_0 + k(\text{g B/l soln.})(10)^{-4}$.
max.	Valeur maximum de.
$M_B/\text{l soln.}$	Nombre de Mol. gr. de B par litre de mélange.
n	Indice de réfraction.
n_λ^t	Indice de réfraction à $t^\circ\text{C}$ pour une lumière de longueur d'onde λ .
N	Nombre d'équivalents grammes de B par litre de mélange.
% B	Nombre de grammes de B pour 100 grammes de mélange = % poids de B.
V_A	Volumes unités du constituant A.
Vol. % B, t°	Volume de B pur à $t^\circ\text{C}$ pour 100 cm^3 de mélange à $t^\circ\text{C}$ = % Vol. de B.
gB/l soln.	Nombre de grammes de B par litre de mélange.
α	$dn/dt = -\alpha \times 10^{-4}$.
δ_d	$1000d_d^t = 1000 + \delta_d$.
δ_n	$1000n_d^t = 1333 + \delta_n$.
ϵ	La précision de n est $\pm 0,0001\epsilon$.
λ	Longueur d'onde de la lumière.
(λ_1^1)	$(n_{\lambda_2} - n_{\lambda_1}) = (\lambda_1^1) \times 10^{-5}$. Les λ peuvent être indiquées par les lettres de la notation de Fraunhofer.
#	Indique une place pour laquelle aucun chiffre n'est donné; par ex., 5# indique que la valeur est plus rapprochée de 50 que de 40 ou de 60, mais que le second chiffre n'est pas connu.

SIMBOLI

a, b, c,	Coefficienti in $n = a + b(10)^{-3} (\% B) + c(10)^{-6} (\% B)^2$.
g B/kg A	Numeri di grammi di B per 1000 grammi di A in una miscela binaria.
M_A/M_B	Diluizione molecolare di B = numero di molecole di A per molecole di B in una miscela binaria.
$d_t^{t''}$	Peso specifico a $t''^\circ\text{C}$ rispetto all'acqua a $t^\circ\text{C}$.
eq.	Equilibrio.
Isom.	Isomero.
k	$n = n_0 + k(\text{g B/l soln.})(10)^{-4}$.
max.	Massimo valore di.
$M_B/\text{l soln.}$	Numero di grammi molecole di B per litro di miscela.
n	Indice di rifrazione.
n_λ^t	Indice di rifrazione a $t^\circ\text{C}$, per luce di lunghezza d'onda λ .
N	Numero di grammi equivalenti di B per litro di miscela.
% B	Numero di grammi di B per 100 grammi di miscela = peso % di B.
V_A	Volumi unitari del costituente A.
Vol. % B, t°	Volume di B puro a $t^\circ\text{C}$, per 100 cm^3 di miscela a $t^\circ\text{C}$ = Vol. % di B.

δ_d	$1000d_d^t = 1000 + \delta_d$.
δ_n	$1000n_D^t = 1333 + \delta_n$.
ϵ	Genauigkeit von n ist $\pm 0,0001\epsilon$.
λ	Wellenlänge des Lichtes.
(λ_2^1)	$n_{\lambda_2} - n_{\lambda_1} = (\lambda_2^1) \times 10^{-6}$. Die λ -Werte können nach der Bezeichnungsweise von Fraunhofer gekennzeichnet werden.
#	Zeigt eine Stelle an, für welche keine Ziffer vorliegt; z. B. 5# gibt an, dass der Wert näher an 50 als an 40 oder 60 liegt, aber die zweite Ziffer ist nicht bekannt.

g B/l soln.	Numero di grammi di B per litro di miscela.
α	$dn/dt = -\alpha \times 10^{-4}$.
δ_d	$1000d_d^t = 1000 + \delta_d$.
δ_n	$1000n_D^t = 1333 + \delta_n$.
ϵ	La precisione di n è $\pm 0,0001\epsilon$.
λ	Lunghezza d'onda della luce.
(λ_2^1)	$(n_{\lambda_2} - n_{\lambda_1}) = (\lambda_2^1) \times 10^{-6}$. I λ possono essere indicati con la notazione di Fraunhofer, in lettere.
#	Indica un posto per il quale nessuna cifra viene data; per es., 5# indica che il valore è più vicino a 50 che a 40 o 60, ma la seconda cifra non si conosce

Arithmetical Relations.—For many binary mixtures, n is an additive function of the volume composition of the mixture: $100(n/d)_m = [n_1(\%)_1/d_1] + [n_2(\%)_2/d_2]$ where the subscript m indicates that the quantity refers to the mixture, but if there is a change in volume this relation does not hold. If $100/d_o = [(\%) / d]_1 + [(\%) / d]_2$, $100/n_o = [(\%) / n]_1 + [(\%) / n]_2$, $C_v \equiv (d_m - d_o)/d_m$, and $C_n \equiv (n_m - n_o)/n_m$, where d_m and n_m are the observed values of d and n for the mixture, then $A \equiv C_v/C_n$ has been called the "refraction constant" (133) of the mixture. It varies but slightly with temperature and wave-length. The equation $(d_m - d_o)/d_m = A(n_m - n_o)/n_m$ is called Pulfrich's formula. Levi (81) used the formula $(d_m - d_o)/d_m = A'(n_m - N_o)/(n_m - 1)$, where $100(N_o - 1)/d_o = [(\%) / (n - 1)]_1 + [(\%) / (n - 1)]_2$, and Doroszewski (37) has shown that for aqueous solutions of nicotine ($C_{10}H_{14}N_2$) and of trimethyl carbinol ($C_4H_{10}O$) A' is independent of the concentration. Hubbard (70) showed that for a number of mixtures Pulfrich's formula with n replaced by $(n^2 - 1)/(n^2 + 2)$ gives a value of A which is independent of the concentration.

Wave-lengths of the Spectral Lines Used in This Section

In column (2) is the symbol of the chemical element which is the source of the line; in (3) is the Greek letter, and in (4) is the Fraunhofer designation of the line. Unit of $\lambda = 1 \text{ \AA} = 10^{-8} \text{ cm}$.

λ	(2)	(3)	(4)	λ	(2)	(3)	(4)
2314				4679			
2574				4861	H	β	<i>F</i>

4341	H	γ	<i>G'</i>	6563	H	α	<i>C</i>
4358	Hg	(Violet)		6708	Li	(Red)	

* Mean value of the doublet.

TABLE 1.—REFRACTIVITY AT ONE WAVE-LENGTH: BINARY MIXTURES

Also formula index for all substances covered by this report.

For dispersion and refraction at other wave-lengths, see Table 5. Substances of unknown composition are given at the end of Sections I and IIb.

The index of refraction (n_λ^t) is here tabulated for one or another of the following values of λ : 6563 Å (*C*, H α), 5893 (*D*), 5876 (He), 5790 (Hg), 4861 (*F*, H β), 3256. (Pulfrich), (Abbe-Zeiss) . . . indicate type of refractometer used; (Kahlbaum) = material obtained from Kahlbaum. E = equivalent weight of B, $n = a + b(\% \text{ B})(10)^{-3} + c(\% \text{ B})^2(10)^{-6} \pm 0.0001\epsilon$, $n = n_o + k(g \text{ B/l soln.})(10)^{-4} \pm 0.0001\epsilon$. For a given mixture the value of N_B and of g B/l soln. varies with the temperature. Unit of $\lambda = 1 \text{ \AA} = 10^{-8} \text{ cm}$. t = centigrade temperature, °C.

Two-Component Systems

Standard Arrangement, v. Vol. III, p. viii; A = H₂O

The refraction of the H₂O used in making the solution is not on record unless it is given below, or the authority is (38, 65, 85, 86); the values given by the latter are: $n_D^{15} = 1.33345$ (38), $n_{25}^{18} = 1.35326$ (65), $n_D^{20} = 1.32522$ (85), $n_D^{18} = 1.33322$ (86).

C₈H₁₀

Ethylbenzene

431. B = C₈H₁₀, *o*-Xylene (92)

% B	n_D^{20}
0.000	1.50497
24.1074	1.50283
50.1866	1.50058
75.2146	1.49847
100.0000	1.49659

$a = 1.50497$, $b = -0.0905$,
 $c = 0.062$; $\epsilon = 1$.

432. B = C₈H₁₀, *m*-Xylene (92)

0.000	1.49843
24.6565	1.49786
50.3372	1.49728
78.8580	1.49673
100.000	1.49659

$a = 1.49843$, $b = -0.0276$,
 $c = 0.092$, $\epsilon = 1$.

433. B = C₈H₁₀, *p*-Xylene (92)

0.000	1.49625
25.2055	1.49632
51.1066	1.49635
75.2683	1.49646
100.000	1.49659

n_D is linear in % B; $\epsilon = 1$.

C₈H₁₀*o*-Xylene434. B = C₈H₁₀, *m*-Xylene; $t = 20^\circ\text{C}$ (92)

% B	n_D^{20}
0.000	1.50497
24.6677	1.50333
49.5001	1

C₈H₁₀*m*-Xylene436. B = C₈H₁₀, *p*-Xylene;
t = 20°C (92)

% B	<i>n</i> _D ²⁰
0.000	1.49840
24.9807	1.49828
50.2550	1.49772
75.0229	1.49712
100.000	1.49625

a = 1.49840, b = -0.0013,

c = -0.202; ε = 1.

TABLE 5.—SPECTRAL DISPERSION OF MIXTURES

For index of refraction at one wave-length, see Table 1 or 2; for formula index of substances, see Table 1; for order of arrangement, see Vol. III, p. viii. Each mixture has the same index number as in Table 1 or 2.

The tabular values $\left(\frac{\lambda_1}{\lambda_2}\right)$ represent differences in n ; $n_{\lambda_2} = n_{\lambda_1} + \left(\frac{\lambda_1}{\lambda_2}\right) \times 10^{-5}$; the average dispersion between λ_1 and λ_2 is $\frac{n_{\lambda_2} - n_{\lambda_1}}{\lambda_1 - \lambda_2} = \left(\frac{\lambda_1}{\lambda_2}\right) \times \frac{10^{-5}}{(\lambda_1 - \lambda_2)}$ per unit of λ . The symbol expressing the concentration always refers to constituent B unless another is indicated.

By combining the differences given in this table with the value of n (for C, D, 5876, F, or 3256) for the same author, as given in Table 1 or 2, his values of n for other values of λ are obtained. Unit of $\lambda = 1 \text{ A} = 10^{-8} \text{ cm}$. t = centigrade temperature, °C.

I. Two-Component Aqueous Mixtures; Standard Arrangement

Only authorities (38, 65, 85, 86) have recorded the refraction and the dispersion of the H₂O used in making the solution, as follows:

$$(38) \quad t = 15^\circ\text{C}, \quad n_D^t = 1.33345, \quad \left(\frac{6708}{5893}\right) = 219, \quad \left(\frac{5893}{5351}\right) = 186;$$

$$(65) \quad t = 18^\circ\text{C}, \quad n_{3256}^t = 1.35326, \quad \left(\frac{4679}{3256}\right) = 1491, \quad \left(\frac{3612}{3256}\right) = 568,$$

$(3405) = 262$, $(3256) = 624$, $(3256) = 1332$, $(3256) = 2040$,
 $(3256) = 3576$; $(^{85}) t = 70^\circ\text{C}$, $n_D^t = 1.32522$, $(\frac{C}{D}) = 175$,
 $(\frac{D}{F}) = 431$; $(^{86}) t = 18^\circ\text{C}$, $n_D^t = 1.33322$, $(\frac{C}{D}) = 183$, $(\frac{D}{F}) =$
 415 , $(\frac{F}{G'}) = 323$.

7. B = H_2SO_4 , 95 to 96%
 H_2SO_4 ; electrically heated SiO_2
 prism, indices corrected to air at
 20°C and 1 atm $(^{15})$

Introduction.—While a non-crystalline substance is in either an electric or a magnetic field it acts optically as a uniaxial crystal with its axis parallel to the field intensity, Kerr (²³), Cotton and Mouton (^{7, 12}). Some act as positive (+) others as negative (−) crystals. Crystalline substances are excluded from this section. The molecules of "crystalline" liquids seem to be completely aligned by the applied field and the order of the resulting birefringence is 10⁶ times as great as that of the liquids here considered.

General Relations.—If n = index of refraction of the substance when in zero field, n_e and n_o = indices when in a field of strength E (electric) or H (magnetic), λ = wave-length of the light in *vacuo*, l = actual length of path of the light in the substance and perpendicular to the field, δ = difference in the equivalent optical paths of the components with electric vector parallel and perpendicular, respectively, to the field, then the *coefficients of birefringence* (C_e , C_m) are defined by the equations $\delta/\lambda = (n_e - n_o)/l = C_e E^2$ (or $= C_m H^2$), or $(n_e - n_o) = C_e \lambda E^2$ (or $= C_m \lambda H^2$). C_e and C_m depend upon λ , the temperature (t), and the substance; for any given gas, C_e is proportional to its density (^{19, 27}). C_e is sometimes called Kerr's constant; it should not be confused with Kerr's magneto-optic constant, Vol. VI, p. 435.

Variation with λ .—For any substance at a constant temperature, Havelock (^{20, 21}) concludes that $n(n_e - n_o) = k(n^2 - 1)^2$, or $C_e \lambda n / (n^2 - 1)^2 = k_e$, $C_m \lambda n / (n^2 - 1)^2 = k_m$, where k , k_e , k_m are pure numbers which are independent of λ , cf. (^{30, 31, 37}). For anisole (C₇H₈O), phenetole (C₈H₁₀O), and *m*-xylene (C₈H₁₀), k_e has been found to be independent of λ ; for toluene (C₇H₈) and ethyl *n*-butyrate (C₈H₁₂O₂), k_e varies slightly with λ ; and for ethyl ether (C₄H₁₀O) and acetal (C₆H₁₄O₂), $C_e \lambda$ varies less than this relation indicates (⁴). For a number of substances (^{37, 40}), including nitrobenzene (C₆H₅NO₂) (^{8, 12}), k_m has been found to be independent of λ .

Variation with t .—For a given λ , Langevin (²⁵) concludes that $C_e n T / \{d(n^2 + 2)^2(\epsilon + 2)^2\} = \varphi_e$ and $C_m n T / \{d(n^2 + 2)^2\} = \varphi_m$,

where d = density, ϵ = dielectric constant, and φ_e and φ_m are independent of absolute temperature (T). The constancy of φ_e has been verified for ethyl ether (C₄H₁₀O) and for CS₂ from −78.5°C to +18°C (²⁹), and for nitrobenzene (C₆H₅NO₂) from 6.14°C to 25°C and for 5 values of λ (³⁸). The value of φ_m frequently varies non-linearly by several parts in 1000 per 1°C; cf. Table 5. In Tables 1, 2, 3, coefficients for linear interpolation over short ranges are given if available.

Time Effects.—The time required for C_e to reach its equilibrium value after the field is applied or removed is approximately proportional to C_e and is of the order of 10^{−8} sec = 0.01 μ sec (^{1, 2, 3, 5.1, 17, 36}); see CS₂ (Table 1), and C₇H₈ and C₁₀H₇Br (Table 3). The effect of electrostriction (see Vol. VI, p. 207) and the heating produced by the conduction current complicate the determination of $(n_e - n)$ and $(n_o - n)$ in electric birefringence. Both effects are reduced by applying the field quickly and maintaining it for a very short time (τ); see following.

Ratio of Changes in Index.—Different theories of electric birefringence predict different values for $\rho \equiv (n_e - n)/(n_o - n)$. That which makes the birefringence (electric or magnetic) depend upon the orientation of the molecules makes $\rho = -2$; Voigt's theory (⁴³) which makes it depend upon a modification of the intraatomic forces makes $\rho = +3$, and a more general form of this theory, Enderle (¹⁶), makes ρ vary with λ and approach +3 for frequencies which are small as compared with those characteristic of the electrons. Using very short times (τ) so as to minimize effects of electrostriction (Vol. VI, p. 207) and heating, Pauthenier (³⁵) found for nitrobenzene (C₆H₅NO₂) and $\tau = 0.46, 0.92, 1.6$, and 2.7μ sec (=10^{−6} sec), $\rho = -2.01, -1.99, -2.03$, and -2.04 , respectively; the same was found for red, yellow-green and blue light; Himstedt (²²) found $\rho = -1.92$; McComb (³¹), $\rho = -1.88$ for $0.540\mu < \lambda < 0.660\mu$. For CS₂, electrostriction compensates the change in $(n_o - n)$, making the apparent (ρ') value of ρ infinite, when $\tau = 8.1\mu$ sec. If electrostriction alone increases the index

from n to $n + \delta'$, and we write $\beta \equiv \delta'(n_0 - n)$, then $\rho' = (\beta + 2)/(\beta - 1)$; for CS₂, Pauthenier ⁽³⁵⁾ found as follows:

τ	0.65	1.3	2.5	4.9	7	8.1	9.8
β	0	0	0.12	0.36	0.74	1	1.4

τ	20	25	30.7	41.7	49	65.6	sec
β	2	1.47	1	1.3	1.1	1.1	

Relation between Electric and Magnetic Birefringence.—The preceding temperature relations indicate that $C_e/\{C_m(\epsilon + 2)^2\} = \varphi_e/\varphi_m$ is independent of T . Cotton and Mouton ⁽¹²⁾ have proposed the simpler relation $C_e/(C_m\epsilon) = \text{const.}$, and have found it more satisfactory for nitrobenzene (C₆H₅NO₂); their values are as follows, a and b being arbitrary constants:

t	aC_e	bC_m	ϵ	$\frac{a}{b} \cdot \frac{C_e(10)^4}{\epsilon C_m}$	$\left(\frac{C}{C_{16^\circ}}\right)_e$	$\left(\frac{C}{C_{16^\circ}}\right)_m$
6°C	68	129	39.4	133.9	1.18	1.08
16	57.6	119.5	37.4	129.0	1.00	1.00
33	45.8	105.2	34.2	127.4	0.796	0.881
54	37.2	90.8	30.6	133.9	0.646	0.760

Units.—Unit of $\lambda = 1\mu = 10^4 \text{ \AA} = 10^{-4} \text{ cm}$.

TABLE 1.—ELECTRIC BIREFRINGENCE OF CS₂ (6, 18, 29, 30)

$n_e - n_o = C_e \lambda E^2$. $A \times 10^{-7} = C_e$ when λ is expressed in cm and E in cgs electrostatic units. Time required for A_{20} to attain equilibrium value is $0.014\mu \text{ sec} = 14 \times 10^{-9} \text{ sec}$ ⁽¹⁷⁾. $A_{15} = 1.025 A_{20}$, $A_{23} = 0.966 A_{20}$; approximately $A_t = A_{20} [1 - 0.005(t - 20)]$ if $18^\circ < t < 28^\circ \text{C}$ ^(26, 27); for lower temperatures, see below. For effect of electrostriction, see above.

$A\lambda$		1.580	1.509	1.450	1.422	1.405

* Basis of reference; derived from $A = 2.53 \pm 0.02$ at 16.3°C ⁽⁹⁾.

TABLE 3.—ELECTRIC AND MAGNETIC BIREFRINGENCE OF PURE SUBSTANCES: RELATIVE VALUES

For most inorganic liquids C_e and C_m are inappreciable, but magnetic birefringence should be exhibited by those paramagnetic substances which have quite anisotropic molecules (cf. aqueous solution of erbium nitrate, Table 4). For organic substances containing only C, H and O, C_m is very small or zero if they are acyclic, and, so far as they have been studied, it is inappreciable if they contain a cyclic nucleus without a double bond.

In this table $\gamma_e/100 \equiv (C/C_{\text{CS}_2})_e$, where C and C_{CS_2} refer to the same temperature (20°C) and the same radiation (usually D-line, $\lambda = 0.589\mu$), and $\gamma_m/100 \equiv (C/C_{\text{C}_6\text{H}_5\text{NO}_2})_m$ where $\text{C}_6\text{H}_5\text{NO}_2 = \text{nitrobenzene}$, C and $C_{\text{C}_6\text{H}_5\text{NO}_2}$ refer to the same temperature (t_m) and to the yellow mercury line ($\lambda = 0.578\mu$). For most substances γ_e is nearly independent of λ ; as a first approximation, γ_m is independent of t_m . Available data for variation of C_e and γ_e with t and λ are given in footnotes; for variation of C_m and γ_m , see Table 5. For $C_e(\text{CS}_2)$ and $C_m(\text{C}_6\text{H}_5\text{NO}_2)$, see Tables 1 and 2.

Data for γ_e are from ⁽²⁶⁾ unless another source is indicated in a footnote: those for γ_m are from ^(9, 12). g = gas at 20°C and 1 atm., l = liquid, b = boils at, m = melts at.

TABLE 5.—MAGNETIC BIREFRINGENCE: VARIATION WITH TEMPERATURE AND WAVE-LENGTH

α_m = mean temperature coefficient of C_{mt} between t' and t'' ; $\Delta/100 \equiv (\varphi_{mt} - \varphi_{m20})/\varphi_{m20}$ where $\varphi_{mt} \equiv C_{mt}nT/\{d(n^2 + 2)^2\}$, T = absolute temperature corresponding to t . $k_m \equiv C_m\lambda n/(n^2 - 1)^2$; $C_m \equiv (n_e - n_o)/(\lambda H^2)$. If λ is expressed in cm, $C_m = A \times 10^{-12}$, $k_m = B \times 10^{-17}$. $\gamma_m/100 = (C/C_{C_6H_5NO_2})_m$, t and λ same for each C . C_{550} , γ_{550} , etc. = value for $\lambda = 0.550\mu$, etc.

Variation with Temperature (39)

Formula	Substance	α_m	$t', ^\circ\text{C}$	$t'', ^\circ\text{C}$	$\Delta t'$	$\Delta t''$
C_6H_5Br	Bromobenzene.....	$\frac{1}{138}$	4.7	54.7	5.2	-6.6

GENERAL INTRODUCTION

Isothermal Monomolecular First-Order Reactions: A →.

$$\frac{dx}{dt} = k(a - x) \text{ or } -\frac{dC}{dt} = kC \quad (I)$$

Integration gives:

$$k = \frac{1}{t} \log_e \frac{a}{a - x} \text{ or } k = \frac{1}{t} \log_e \frac{C_0}{C} \quad (II)$$

and

$$k = \frac{1}{t_2 - t_1} \log_e \frac{a - x_1}{a - x_2} \text{ or } k = \frac{1}{t_2 - t_1} \log_e \frac{C_1}{C_2} \quad (III)$$

If \log_{10} is used instead of \log_e , the constant will become $k' = 0.4343k$; a or C_0 = the initial concentration of the reacting substance and $(a - x_n)$, or C_n , its concentration at a time t_n units later.

Reversible First-Order Reactions.

$$\frac{dx}{dt} = k_1(a - x) - k_2(b + x) \quad (IV)$$

$$k_1 + k_2 = \frac{1}{t} \log_e \frac{x_\infty}{x_\infty - x} \text{ or } = \frac{1}{t_2 - t_1} \log_e \frac{x_\infty - x_1}{x_\infty - x_2} \quad (V)$$

where

$$x_\infty = x \text{ for } t = \infty, \approx x \text{ at equilibrium,}$$

where

$$\frac{b + x_\infty}{a - x_\infty} = \frac{k_1}{k_2} = K_E, \text{ the "equilibrium constant"} \quad (VI)$$

If π be any property of the reacting mixture such that

$$\pi = p(a - x) + q(b + x), \quad (VII)$$

where p and q are proportionality factors, then

$$k_1 + k_2 = \frac{1}{t} \log_e \frac{\pi_0 - \pi_\infty}{\pi - \pi_\infty} \text{ or } = \frac{1}{t_2 - t_1} \log_e \frac{\pi_1 - \pi_\infty}{\pi_2 - \pi_\infty}, \quad (VIII)$$

where the subscript identifies the time to which the π value belongs.

If A and B are optical antipodes,

$$k_1 = k_2 = k, k_1 + k_2 = 2k, \text{ and } K_E = 1 \quad (IX)$$

Isothermal Bimolecular Second-Order Reactions: A + B →.

$$\frac{dx}{dt} = k(a - x)(b - x) \quad (X)$$

$$k = \frac{1}{t(b - a)} \left(\log_e \frac{a}{a - x} - \log_e \frac{b}{b - x} \right)$$

or

$$k = \frac{1}{(t_2 - t_1)(b - a)} \left(\log_e \frac{a - x_1}{a - x_2} - \log_e \frac{b - x_1}{b - x_2} \right) \quad (XI)$$

or if $b = a$

$$k = \frac{1}{ta} \frac{x}{a - x} \text{ or } = \frac{1}{t_2 - t_1} \left(\frac{1}{a - x_2} - \frac{1}{a - x_1} \right) \quad (XII)$$

If a differs but slightly from b , a series expansion of Eq. (XI) may be used; or k may be taken as the geometrical mean of the values obtained from Eq. (XII) by putting, 1st, $a = a$ and 2nd, $a = b$.

The differential equation is given in case the rate does not follow a simple law, and the integrated expression is then often omitted.

Progressive Change in k .— \downarrow (resp. \uparrow) = "the value of k is greatest at the beginning (resp. end) of the reaction."

Temperature Coefficient.—The effect of temperature will be exhibited approximately by $Q_{10} = \frac{k_{\theta+10}}{k_\theta}$ where k_θ is the value of k at θ° ; or more exactly by the constant A in the equation $\log_e k = A/T + J$ or $\log_{10} k' = -A'/T + J'$ where A' (resp. J') = $0.4343 \times A$ (resp. $\times J$). E (= RA , where R is the gas constant) has been called the "internal energy" (Rice), the "critical energy" (Marcelin), the "critical energy increment" (McC Lewis) or the "activation heat" (Arrhenius).

EXPERIMENTAL DATA

First-Order Gas Reactions

Nearly all reactions of this class take place almost entirely on the surface of the containing vessel as shown by the increase of k with increasing ratio of surface to volume; and several investigators have expressed the opinion that *true* first-order reactions do not exist (417). However, as a result of recent work, several examples are known; *cf.* $\text{SO}_2\text{Cl}_2 \rightarrow \text{SO}_2 + \text{Cl}_2$ and $\text{N}_2\text{O}_5 \rightarrow \text{N}_2\text{O}_4 + 1/2\text{O}_2$ below. For nearly all these first-order gas reactions k has been shown to decrease at very low pressure (254.5, 411.5); and new theories have been advanced (419.5). The important qualitative result is that the new evidence favors the collision mechanism and not the radiation theory.

DECOMPOSITION OF PHOSPHINE

Manometric method; t in seconds (309).

$T, ^\circ\text{K} \dots\dots\dots$	845	785	719	640	583
$10^3k \dots\dots\dots$	540	2.1	0.81	0.19	0.053

The observed values have been smoothed by graphing. The calculated values are computed from the equation:

$$\log_{10} k = \frac{-18\,963}{T} + 2 \log_{10} T + 12.130; \text{ cf. (160)}$$

% G = % of reaction in the gas phase; $100 - \% \text{ G} = \% \text{ on walls}$; t in seconds (517).

* Average using Bodenstein's calculations (51).

† Vapor saturated with solid N_2O_5 ; values less accurate.

Effect of NO_2 at the beginning of the reaction

According to later measurements by Daniels *et al.* (133, 134, 560), traces of NO_2 are necessary for a smooth monomolecular course of the reaction, which would thus have an autocatalytic induction period. However, White and Tolman (549.5) have found no evidence of this effect at the lowest concentration measurable, and conclude that the reaction is monomolecular in its initial stage.

Colorimetric method; t in minutes; the values of k agree with those above.

According to Beckmann (33) the two menthones are not optical antipodes and hence *k*₁ ≠ *k*₂.Measurements in various solvents; *k* independent of direction. Catalyzed by alcoholates, quaternary ammonium bases, and strong acids but not proportionally to their concentration.

Slight catalysis by weak acids. Not influenced by neutral salts, by acetic esters, or by dimethylhydroresorcinols. The catalysis by alcoholates is not influenced by slowly saponifiable esters but rapidly saponifiable ones react with Na from the alcoholates and decrease the reaction velocity accordingly.

l-MENTHONE \rightleftharpoons d-MENTHONE.—(Continued)Polarimetric method; *t* in minutes; catalyst, 0.02 (resp. 0.01N) alcoholate (resp. 0.01N HCl) (522, 523).

The reaction in the melt is very slow and depends on the nature of the walls, the presence of traces of impurities (*e.g.*, acids) and the previous history of the sample used. Acids are poor catalysts in H_2O and alcohol and good catalysts in non-ionizing solvents. The reaction in the gas phase is very slow even on the walls. For preparation of the pure tautomers, *v.* (370, 371).

HYDROXYTRIAZOLE \rightarrow DIAZOMALONIC ESTER

Method: iodine titration of the acid form; t in minutes; first-

order k . Methyl 1-methyl-5-hydroxytriazole-4-carboxylate $\xrightleftharpoons[k_2]{k_1}$ Methyl methylaminodiazomalonate. Ionization constant of the acid form = 2.8×10^{-3} .

Values for 50°C in various solvents (149)

	CH_3OH	$\text{C}_6\text{H}_5\text{CH}_2\text{OH}$	CH_3COCH_3
$10^3 k_1$	0.120	0.278	1.36

CHCl_3	61.8	172		6.5

AMMONIUM THIOCYANATE

Reaction in the melt; titrimetric method; first-order k ; t in minutes; at 170°C , $k_1 = 0.015$, $k_2 = 0.044$, $K_E = \frac{1}{3}$ (25, 415, 528).

Decomposition Reactions

NITRAMIDE

For preparation of nitramide, *v.* (512). First-order k ; t in minutes; solvent, water; all values at 15°C (93).

$k = k_0 + k_c C_{\text{cat}}$, where k_0 is the constant for the uncatalyzed reaction and k_c that with a catalyst of concn. C_{cat} , M/l. All substances which decrease the $[\text{H}^+]$ of the solution act as catalysts. $k'_0 = 366$ to 398×10^{-6} , mean = 0.038 .

Catalysis Constants for Anions of Acids

Values of k_c for the anions of weak monobasic acids, and their relation to the ionization constants, k_D

Acid	k'_c	$100k_D$	$10^5 k'_c \times k_D^{0.83}$
Propionate.....	0.65	0.00134	5.9
Acetate.....	0.50	0.0018	5.8
Phenylacetate.....	0.23	0.0053	6.5
Benzoate.....	0.19	0.0065	6.3
Formate.....	0.082	0.021	7.2
Salicylate.....	0.021	0.1	6.2
Dichloroacetate.....	0.0007	5.0	5.8
			Mean: 6.2

In the case of polybasic acids the value of k_c for each anion was found to be similarly related to the corresponding ionization constant when the latter is corrected by a "statistical" factor, n , as illustrated below. The subscripts 1 and 2 refer to the first and second ionization stages, respectively.

Catalysis Constants for Anions of Acids.—(Continued)

Acid	$10^3 k_{D1}$	n	k'_c	$10^5 k'_c (nk_{D1})^{0.83}$	$10^5 k_{D2}$	n	k'_c	$10^5 k'_c (nk_{D2})^{0.83}$

Effect of temperature in 0.04N NaOH

$^\circ\text{C}$	20	30	35	40	45	50	60	70
$10^3 k$	1.06	3.08	5.16	7.90	13.4	17.3	38.9	58.8
Q_{10}		2.9	2.6		2.2		2.2	1.5

Catalysis by Iodide Ion

According to Abel (3), the reactions are $\text{H}_2\text{O}_2 + \text{I}_2 \longrightarrow 2\text{H}^+ + 2\text{I}^- + \text{O}_2$ [for kinetics, *v.* (5)] and $\text{H}_2\text{O}_2 + 2\text{H}^+ + 2\text{I}^- \longrightarrow 2\text{H}_2\text{O} + \text{I}_2$. For t in minutes; first-order $k_{\text{cat}} = k[\text{I}^-]$. At 25°C , $k = 1.33$ (84, 534); *cf.* (89); = 1.4 (3); = 1.38 (241).

Neutral salts alone have slight influence. In the presence of iodide their pronounced catalytic effects increase in the order K^+ , Na^+ , Li^+ (241, 537, 538, 540).

In cases where the H_2O activity is constant, this catalysis by a neutral chloride is related to the Cl^- -activity, a , by the simple rule, $k_{\text{cat}}/a = \text{constant}$, for the same salt concentration (240).

Catalysis by $\text{K}_2\text{Cr}_2\text{O}_7$

$$-\frac{d[\text{H}_2\text{O}_2]}{dt} = k[\text{K}_2\text{Cr}_2\text{O}_7][\text{H}_2\text{O}_2]$$

t in minutes; $\theta = 25^\circ\text{C}$; $k = 20.9$ to 34.5 in the interval

$[\text{K}_2\text{Cr}_2\text{O}_7] = 0.009$ to 0.043 (494); *cf.* (421, 495).

Heterogeneous Catalysis

By Colloidal Platinum

First-order k ; t in minutes; $\theta = 25^\circ\text{C}$; Pt, 1 to 31 500 (76, 79), effect of age of Pt soln.

Pt-soln., days old.....	0	1	5
k'	0.023	0.025	0.022
k' (with Na_2HPO_4 , 1 to 2000)....	0.015	0.016	0.012

Effect of concentration of Pt soln.; $k = \text{constant} \times [\text{Pt}]^n$ where n is a constant dependent upon the nature of the Pt preparation.

$1.13 \times 10^8 [\text{Pt}]$	32	24	16	12	6	4	3
$n = 1.58$ $10^3 k' (\text{obs.})$	115	72	40	24	8.4	4.6	2.7
$10^3 k' (\text{calc.})$	115	74	39	24	8.2	4.3	2.7

Effect of Poisons

The catalytic action of colloidal Pt is diminished by various "poisons" most of which are likewise physiological poisons. With certain of these poisons the catalyst, toward the end of the reaction, partially "recovers" from the effects. This is illustrated by the following table for HCN on $[\text{Pt}] = 1.03 \times 10^{-5}$.

$10^6 [\text{HCN}]$	0	0.05	0.1	0.2	0.5	1	2
$10^3 k'$, (begin).....	4.1	1.6	1.3	0.75	0.33	0.20	0.15
$10^3 k'$ (end).....	4.1	2.4	1.5	0.86	0.36	0.29	0.35

List of "Poisons" (* = Partial Recovery)

Powerful "poisons:" HCN^* , ICN , I_2 , HgCl_2 , H_2S , $\text{Na}_2\text{S}_2\text{O}_3$, CO^* , P , PH_3 , AsH_3 , $\text{Hg}(\text{CN})_2$, CS_2 .

Moderate "poisons:" aniline, hydroxylamine, Br_2 , HCl , oxalic acid, amyl nitrite, As_2O_3 , Na_2SO_3 , NH_4Cl .

Weak "poisons:" H_3PO_3 , NaNO_3 , HNO_2 , pyrogallol, nitrobenzene, HF , NH_4F .

Inactive substances: dilute KClO_3 , ethyl and amyl alcohols, ether, glycerol, turpentine, chloroform.

Positive catalysts, ("tonics"): formic acid, hydrazine, dilute HNO_3 .

By Colloidal Palladium

First-order k ; t in minutes; $\theta = 25^\circ\text{C}$ (75)

$[\text{Pd}]$	$[\text{NaOH}]$	k	$[\text{Pd}]$	$[\text{NaOH}]$	k
0	1:33 000	0	1:13 200*	1:6 000	0.0073

ACETOACETIC ACID \longrightarrow ACETONE + CO₂

Both the undissociated acid (HA) and its anion (A⁻) undergo the reaction:

$$\frac{d[\text{CO}_2]}{dt} = k_1[\text{HA}] + k_2[\text{A}^-]$$

Let k_D = the ionization constant and α the degree of ionization of the aceto-acid, then

$$\frac{dx}{dt} = k_1(1 - \alpha) + k_2\alpha(a - x)$$

$$\frac{dx}{dt} = [k_1[\text{H}^+] + k_2k_D] \frac{(a - x)}{[\text{H}^+] + k_D}$$

k_1 is measured in strongly acid and k_2 in strongly alkaline solution. k_1 and k_2 together with a velocity measurement in an acetic acid-acetate solution give k_D . t in minutes (551); cf. (343). For preparation of the aceto-acid, v , (344).

°C	10^3k_1	10^3k_2	10^3k_D	Q_{10}
25	0.99	0.02	0.316	3.53(k_1)
37	4.5	0.08	0.24	3.16(k_2)

Catalysis by Aniline

This reaction is of interest because, as in the case of many biochemical reactions, there is a maximum catalytic effect at a given [H⁺]. For details, v , (552).

First-order k ; t in minutes; solvent, aniline (207). $10^3k = 0.040$ at 25°C; = 0.80 at 45°C; $Q_{10} = 4.47$. Addition of picric acid does not influence the velocity.

Titrimetric method; first-order k ; t in hours; solvent, H₂O; Temp. = B. P. of the solution (351)

In alcohol, esterification takes place also with a first-order $k = 0.0102$. Bases act as catalyzers; optically inactive bases act the same on the *d*- and the *l*-acids, but active bases act more powerfully on the *d*-acid (73, 75).

°C	Solvent	10% k

75	10 cm ³ Acetophenone + 1.65 g Quinidine.....	6.46	4.42

The *dl*-acid is made optically active by catalysis with an optically active base. The optical activity attains a maximum at the time,

$$t = \frac{1}{k_l + k_d} \log_e \frac{k_l}{k_d}$$

where k_l (resp. k_d), are the constants of the two isomers. For asymmetric synthesis, *v*. (74).

The catalytic action of bases in general can be interpreted in terms of two velocity constants, one for the free acid and one for its salt. For details, *v*. (77, 285).

Bromocamphorcarboxylic acid \longrightarrow Bromocamphor + CO₂

First-order k ; t in minutes (128, 128.5)

In acetic anhydride as solvent the mixed anhydride CH₃CO₂OCH is formed. For details of the reaction with various catalyzers, *v*. (535). For application of this reaction to the determination of acetic acid in acetic anhydride, *v*. (434).

CHLORAL HYDRATE

The equilibrium:

is rapidly established in alkaline solution and is followed by the slower reaction:

At low temperatures in strongly alkaline solutions the equilibrium (I) is displaced to the right and the net reaction is (II) with first-order k .

Titrimetric method; first-order k ; t in minutes; reaction mixture: 1 liter, composed of a moles chloral hydrate and b equivalents of base, the titer being T , hence

$$k' = \frac{1}{t} \log_{10} \frac{b - T_{\infty}}{T - T_{\infty}} \cdot [\text{OH}^-] = b - a$$

Measurements at 0°C, with KOH and with $a = 0.01$ (164)

b	$b - a$	k'	$k'/(b - a)$
0.012	0.002	0.0062	3.10
0.014	0.004	0.0134	3.35
0.016	0.006	0.0204	3.40

For the first solution ($k' = 0.0062$) we have therefore

$$\frac{d[\text{HCOO}^-]}{dt} = 7.1[\text{OH}^-][\text{CCl}_3\text{CH}(\text{OH})\text{O}^-] \text{ at } 0^\circ\text{C}$$

Neutral salts catalyze the reaction as in the case of sugar inversion by acids.

With increasing temperature ($Q_{10} = 5$), hydrolysis of the chloral salt increases and the constant k' exhibits a progressive decrease; *cf.* (57, 412, 548).

Addition Reactions

ADDITION OF PHENOLS TO OLEFIN OXIDES IN 98% ALCOHOL

With pure phenol the reaction proceeds slowly, catalyzed by the phenolate (59, 60):

At constant concentration of phenol, k for olefin oxides is of first-order. Gravimetric method; t in hours; $[\text{ROH}] = 1$; $[\text{RONa}] = 0.05$; $\theta = 70.4^\circ\text{C}$ (59, 60). (I) k' for ethylene oxide = $0.4343k$; (II) k' for propylene oxide = $0.4343k$.

Average values in the benzene solution: $k_1 = 4 \times 10^{-3}$; $k_2 = 13.3 \times 10^{-3}$; $K = 0.3$.

POLYMERIZATION OF CYANAMIDE TO DICYANDIAMIDE BY AQUEOUS ALKALIES

The velocity in 0.125N NaOH is a maximum (223, 224) which accords with the relation:

$$\frac{d[(\text{CNNH}_2)_2]}{dt} = k[\text{CNNH}^-][\text{CNNH}_2]$$

ADDITION OF BROMINE TO DOUBLE BONDS

First-order k if the concn. of olefin as solvent is constant; t in hours; $\theta = 25^\circ\text{C}$ (249); cf. (31, 248).

Olefin	Formula	$k' = 0.4343k$
<i>cis</i> -Dichloroethylene.....	$\text{CHCl}:\text{CHCl}$	0.024
<i>trans</i> -Dichloroethylene.....	$\text{CHCl}:\text{CHCl}$	0.012
Tetrachloroethylene.....	$\text{CCl}_2:\text{CCl}_2$	0.077

ADDITION OF OLEFINS TO ORGANIC ACIDS TO FORM ESTERS

Acetic acid scarcely reacts with amylene. The equilibrium is toward the side of the dissociation product. In general, ester formation is more nearly complete the stronger the acid.

Reaction with Excess of Amylene

The reaction is of the third-order with respect to the acid and runs to completion at low temperatures:

$$\frac{1}{V} \frac{dx}{dt} = k \left(\frac{1-x}{V} \right)^3$$

$$k' = \frac{1}{t - t_0} \left(\frac{1}{(1-x)^2} - \frac{1}{(1-x_0)^2} \right) = \frac{\text{constant}}{V^2}$$

Trichloroacetic Acid (382)

Titrimetric method; V = dilution per mole; t in minutes

Mole		V in cm ³	$^\circ\text{C}$	k'	$10^4 k' V^2$
Acid	Amylene				
1	6.8	915	28.7	0.037	3.10
1	15.75	1986	28.7	0.0079	3.12
1	4.124	595.6	31.2	0.127	4.50
1	7.663	1018	31.2	0.041	4.25

$$Q_{10} = 3.93$$

The acid which combines acts therefore simultaneously as a catalyst according to its second power.

Equilibrium Reaction

Both reactions are catalyzed by the acid according to the second power, hence

$$\frac{1}{V} \frac{dx}{dt} = \frac{k}{V^4} (a - x)(b - x)^3 - \frac{k'}{V^3} [x(b - x)^2]$$

Integration for $b = 1$ gives approximately

$$C = \frac{k(1 - \xi_1)^2 \xi_2^2}{V^3(\xi_1 + \xi_2)} = \frac{1}{t} \left[\log_e \frac{\xi_1(1 - x)}{1 - \xi_1} - \left(1 - \xi_1 \right) \left(1 + \frac{1 - \xi_1}{\xi_1 + \xi_2} \right) \left(\frac{1}{1 - x} - 1 \right) \right]$$

where

$$\xi_1 = x \text{ for } t = \infty$$

$$\xi_2 = \frac{a}{\xi_1} \text{ for } t \text{ in minutes.}$$

Coordination Reactions

By this is understood reactions of the type:

and the analogous reaction of alkyl halogen amines in forming heterocyclic compounds:

ALKYL HALOGEN AMINES (188, 189, 190, 192)

In alkaline media the first-order reaction runs to completion with the formation of a heterocyclic compound; in acid media the reverse reaction runs to completion; in neutral media the reaction reaches a measurable equilibrium but is accompanied by a side reaction.

Method: volumetric and coagulation of As_2S_3 sol; *k*, first-order; *t* in minutes.

Conversion of β -Bromoethylamine into Ethyleneimine in aqueous alkaline solution:

°C.....	0	16.65	25
10^2k	0.068	0.89	2.9

$$\log_e k = -\frac{12579}{T} + 38.770$$

Conversion of δ -Chlorobutylamine into Pyrrolidine in aqueous alkaline solution:

°C.....	0	25	Q_{10}
<i>k</i>	0.021	0.45	3.6

Conversion of ϵ -Chloroamylamine into Piperidine in various solvents:

The solvents immiscible with water were saturated with H_2O .

Neutral salts have no significant influence. The influence of temperature is great. For k_1 , $Q_{10} = 4.80$ between 1 and 25° , = 3.80 between 20 and 25° ; for k_2 , $Q_{10} = 4.00$ between 20 and 25° (46).

At 25°C , k_1 and k_2 are expressed by the equations:

$$k_1 = 0.00272 + \frac{0.0000162}{[\text{H}^+]} \quad (46)$$

$$k_1 = 0.00265 + \frac{0.0000142}{[\text{H}^+]} \quad (328)$$

$$k_2 = \frac{3.1 \times 10^{-6}}{[\text{H}^+]} + \frac{5 \times 10^{-10}}{[\text{H}^+]^2} \quad (46)$$

k_1 and k_2 are aggregates of the velocity of conversion of the separate forms in which the reacting salts may appear. The hydrolytic forms act more rapidly than the ions. The first-order constants of the following forms have the values indicated (46):

According to Lamb and Fonda (328) the hydrolysis constants are:

The large temperature coefficients of k_1 and k_2 are caused by the great increase of hydrolysis with increasing temperature. The reaction: green chromic salt \rightarrow blue chromic salt is an example of the negative catalysis of hydrogen ion. For other work on negative catalysis, see (45, 514, 563).

Rearrangement of Dyestuffs and Indicators

CARBINOL FORM \rightleftharpoons QUINOID FORM

Colorimetric method; t in minutes; aqueous solution with 7% alcohol; first-order $k' = 0.0434 k$ (43); cf. (15, 38, 197, 236, 237, 374, 433).

* At still higher concentrations of ester, $k(1)$ increases with time.

Reaction in a viscous medium (water-gelatin) (104)

k = First-order constant for minutes and 18°C.

k_r = Constant reduced to the same H_2O concentration (unit: pure H_2O at 18°C).

η = Viscosity measured with Scarpa viscometer and referred to that of 0.5*N* HCl.

HCl, <i>N</i>	% Gelatin	η	10^3k	10^3k_r

Effect of blood charcoal (320); blood charcoal, Merck (purified with HCl); $\theta = 25^\circ\text{C}$

mgC/100cm ³	k	mgC/100 cm ³	k
0	6.26 ; 6.23	745.1	2.61 — 1.66
401.2	3.58 — 2.60	1066.0	1.99 — 1.49

Reaction in aqueous alcohol solution (312)

Vol. % C ₂ H ₅ OH	50	75	95	100
k , 25°C.	1.62	0.668	0.136	0.00753

$\theta = 25^\circ\text{C}$; 96.4 Wt. % C₂H₅OH. The H₂O content = 3.6 Wt % or 3.6 M/l if it is assumed that all the soda is present as NaOH (547); α = calc. degree of dissociation of NaOH (assuming the mass law to hold true) with 0.02 used as the NaOH dissociation constant:

$$-\frac{d[\text{CH}_3\text{CO}_2\text{C}_2\text{H}_5]}{dt} = [\text{CH}_3\text{CO}_2\text{C}_2\text{H}_5][\text{NaOH}][0.12911(1 - \alpha) + 0.05710\alpha]$$

The undissociated base therefore saponifies more rapidly than its ions. The velocity increases greatly with increased water content of the alcohol. If the solution is prepared by dissolving metallic sodium and if the water content of the alcohol is not sufficient to combine all Na as NaOH, the bimolecular law no longer holds and the velocity is very small. This makes it probable that the saponification is entirely caused by NaOH and not by NaOC₂H₅; cf. in this connection (545, 546).

ALKALINE SAPONIFICATION OF ESTERS BY SALTS OF WEAK ACIDS

Slightly Hydrolyzed Salts (22, 26, 234, 325, 352, 369, 441, 479, 555, 557, 558)

Example:

$$\frac{dx}{dt} = kK \frac{(a-x)(b-x)}{x}; \text{ units: minutes and M/l.}$$

 k = Second-order constant of ester saponification by [OH⁻]. $K_w = [\text{H}^+][\text{OH}^-] = \text{constant} = \text{ion product of H}_2\text{O}.$ K_a = dissociation constant of HCN. $K = \frac{K_w}{K_a}$ = hydrolysis constant of KCN.

			β-Dimethyluracil-Na.....	185.0	1.20	16.2	0.74	
			Succinimide-Na.....	453.0	1.20	3.97	0.302	
			Theobromine-Na.....	104.0	1.20	10.8	1.11	
			C ₆ H ₅ ONa.....	89.0	1.20	9.23	1.30	
			Theophylline-Na.....	8.45	1.20	0.741	16.2	
			Paraxanthine-Na.....	6.16	1.20	0.540	22.2	
CH ₃ CO ₂ C ₂ H ₅	18.0	3.98	NaCN.....	6.05		1.52		(369)
	25.0	6.17	NaCN.....	10.36		1.68		
CH ₃ CO ₂ CH ₃	25.0	10.74	Na ₂ CO ₃	110.0	1.00	10.2	0.977	(479)

The following values of *Q*₁₀ hold for the constants *kK* and *k* of the reaction CH₃CO₂C₂H₅ + KCN, according to (352, 369):

°C.....	10.3–25.05	25.05–41.8	18–25	Mean
<i>Q</i> ₁₀ for <i>kK</i> = <i>τ'</i>	2.18	2.28	2.16	2.20
<i>Q</i> ₁₀ for <i>k</i> = <i>τ</i>	1.90	1.79	1.87	1.85

The relation between *τ'* and *τ*, according to (447, 449) is given by:

$$\log_e \frac{\tau'}{\tau} = \frac{10U}{RT(T + 10)}$$

where *U* is the heat of the reaction OH[−] + HCN = H₂O + CN[−], which is considered constant over the temperature range 10°.

Strongly Hydrolyzed Salts

For the theory of the reaction, see (347).

Saponification of CH₃CO₂C₂H₅ by NaOH in the presence of sugars (120)

The following velocity constants were found at 25°C (*k* = 6.86), in the presence of sugars or high-order alcohols in *N*/40 solution of ethyl acetate and NaOH:

Sugar	<i>N</i>				
	1/5	1/10	1/20	1/40	1/80
Cane sugar.....	2.01	3.12	4.29	5.19	5.88
Invert sugar.....	0.38	0.67	1.17	2.08	3.38
<i>d</i> -Glucose.....	0.79	1.37	2.32	3.69	4.79
<i>d</i> -Fructose.....	0.59	1.02	1.88	3.04	4.27
Mannitol.....	5.17	5.85	6.18	6.40	6.81

From this may be calculated the degree of hydrolysis of the corresponding sugar solution.

ALKALINE SAPONIFICATION, IN AQUEOUS SOLUTION, OF ESTERS (GENERAL FORMULA HAR) WHICH ARE THEMSELVES WEAK (RESP. PSEUDO) ACIDS

$$\frac{dx}{dt} = k[\text{HAR}][\text{OH}^-] = k[\text{HAR}] \frac{K_w [\text{RA}^-]}{K_a [\text{HAR}]} = k_1 [\text{RA}^-].$$

$$k_1 = k \frac{K_w}{K_a} = \text{First-order constant.}$$

k = Second-order constant of alkaline saponification of HAR.

$$K_w = [\text{H}^+][\text{OH}^-] = 1.3 \times 10^{-14}.$$

K_a = Dissociation constant of the weak acid, HAR.

Example:

The disubstituted acetic acid ester which forms no salts with NaOH behaves as a normal (*i.e.*, neutral) ester (215, 218, 343, 359).

Titrimetric method; *θ* = 25°C; units: minutes and M/l

Ester	<i>k</i> ₁	10 ¹¹ <i>K_a</i>	<i>k</i>	Lit.
CH ₃ COCH ₂ CO ₂ CH ₃	0.0279	2.0	43.0	(343)
CH ₃ COCH ₂ CO ₂ C ₂ H ₅	0.0186	2.0	28.6	(215, 218)

CH ₃ COC(CH ₃) ₂ CO ₂ CH ₃			2.43	
CH ₃ COC(CH ₃) ₂ CO ₂ C ₂ H ₅			0.76	(359)
CH ₃ COC(C ₂ H ₅) ₂ CO ₂ C ₂ H ₅ ...			0.0058	(215, 218)

THE THREE CONSTANTS OF SAPONIFICATION IN AQUEOUS SOLUTION

If (*a* − *x*) is the concentration of the ester, organic acid anhydride or ether, all of which have an "ether oxygen," then:

Where X and Y represent alkyl or acyl, the general velocity equation is:

$$\frac{dx}{dt} = (k_w + k_a[\text{H}^+] + k_b[\text{OH}^-])(a - x)$$

where *k_w* = constant for water saponification, *k_a* for acid saponification, and *k_b* for alkaline saponification.

The units for all the constants quoted in the following are minutes and M/l.

For references on the general equation, see (92, 456, 476, 541, 542). For methods of determining *k_a* and *k_b* by means of buffer salts, see (423, 450, 451, 454, 458, 460, 467, 470, 476, 478, 479, 480, 481, 485).

Esters and ethers of polybasic acids and of poly-alcohols saponify in stages. As a rule, with esters of polybasic acids, the constant of the second saponification stage, *k_a*, holds for the undissociated ester-acid, and *k_b* for its anion.

Esters and ethers of poly-alcohols with dissimilar groups yield isomeric intermediate products. The latter, under the catalytic influence of acids and bases are capable of changing from one to the other; *cf.* (487).

If the velocities for different types of esters or ethers are to be intercompared, such comparison must be made through the "group constants;" that is, the constants reduced to the bases of a single "ether oxygen."

If the group constants of a poly-ester or ether are the same, the following simple relation holds: The velocity is directly proportional to the number of saponifiable groups present.

For the determination of the constant of the intermediate stages from the total net reaction, see the fundamental work of Wegscheider (544).

O-CH_2				

As a rule, with β -lactones, k_w is large as compared with $[\text{H}^+]\text{k}_a$, with γ - and δ -lactones, it is small. With lactic acid (d -malolactonic acid, d -saccharic acid- γ -lactone, paraconic acid) k_a applies for the anion and k_a chiefly for the undissociated lactone acid.

Saponification Constants of Lactides

Titrimetric method

* Saponification stage.

† These constants were measured in 50 vol. % aqueous alcohol; methyl alcohol for the methyl esters and ethyl alcohol for the ethyl esters.

‡ The saponification constants for *d*-, *l*-, and *dl*-tartaric esters are the same.

For diethyl diethylmalonate ($\text{C}_2\text{H}_5)_2\text{C}(\text{CO}_2\text{C}_2\text{H}_5)_2$, the two constants of alkaline saponification at 85°C in 50 vol. % aqueous alcohol are 0.138 and 0.0122 (157.5).

Alkaline Saponification of Esters of Polycarboxylic Acids with Unlike Groups

Ethyl citrate in aqueous solution; titrimetric method (405)

Ethyl citrate.—(Continued)

Reaction	k_a		
	15°	23°	30°
I \rightarrow III.....	63.7	98.9	149.8

II \rightarrow IV.....	0.841	1.48	2.27
V \rightarrow VI.....	0.0149	0.0283	0.0409
IV \rightarrow VI.....	0.132	0.238	0.302

Saponification, in Aqueous Solution, of Esters of Poly-alcohols with Groups Capable of Identical Reactions

k is the constant calculated on the equivalent basis. For $k_1/k_2 = 2/1$, $k = 0.5k_1 = k_2 = \text{constant}$ or more generally: if the velocity is directly proportional to the number of reacting groups in the molecule, k is constant.

Titrimetric method

Ester	k_a	°C	Lit.	k_b	°C	Lit.
$(\text{CH}_3\text{CO}_2\text{CH}_2)_2$				2.50	0	(313)
				12.54	19.8	
	0.00235	18	(363)	7.618	18	(364)
	0.00456	25.2		16.330	25	
$(\text{CH}_3\text{CO}_2\text{CH}_2)_4\text{C}$...	0.00432	25	(487)	20.5	25	(487)

The constants k_a (resp. k_b) calculated from equivalents are approximately constant.

Saponification of Esters of Poly-alcohols with Unlike Groups (e.g., Glycerol) in Aqueous Solution

Titrimetric method; k = the "equivalent constant" for saponification of glyceryl acetate

	Monacetin	Diacetin	Triacetin	°C	Lit.
10^3k_a	2.27	1.93	2.00	18	(360)
10^3k_b	4.32	3.53	3.62	25.2	
10^3k_a			8.94	35	(562)
k_a	8.13	7.85	7.89	18	(364)
k_b	17.22	17.79	16.74	25	
k_a	20.1-21.5	22.1-25.5	21.9-22.5	25	(491)

For further data on saponification of glyceryl esters, see (1, 196, 337, 508, 520).

The conditions for $k = \text{constant}$ are (543):

$$\begin{aligned} k_1 + k_2 &= 3k \\ k_{11} &= k_{21} + k_{22} = 2k \\ k_{10} &= k_{20} = k \end{aligned}$$

where A = Acyl.

For the effect of rearrangement (acyl wandering) on the variation of k , see (487).

Saponification of Fats by NaOH in 95 % Alcohol at 25°C; Titrimetric Method (271)

* This value is extrapolated from 9×10^{-5} at 98°C.

The Constant, *k_w*, of Hydration of Organic Acid Anhydrides in Aqueous Solution

The anhydrides undergo a rapid saponification in water. Because of the high value of *k_w*, *k_a* and *k_b* are measured only with difficulty.

Conductivity method except for those of (454) which were determined from the kinetics of the simultaneous reaction with iodide-iodate.

For velocity of reaction in various solvents, its acceleration by acids and the influence of the initial anhydride concentration on *k_w*, see (392).

Alcoholysis of Esters (Interconversion of Ester by Alcohol) in Solutions of ROH

The reaction is accelerated by acids as well as bases:

The velocity is proportional to the HCl concentration; *k* = monomolecular constant referred to [HCl] = 1; *t* in minutes; *θ* = 30°C; polarimetric method (135, 136).

C ₆ H ₄ (NO ₂)(CH ₂ Cl), k at 83°...	0.00130	0.00140	0.00115

1-Monochlorohydrin, CH₂ClCHOHCH₂OH, in aqueous soln.; 10⁵k = 9 at 100°C.

Ethyl nitrate, C₂H₅ONO₂, in equal volumes of H₂O and acetone; 10⁵k = 8.3 at 64°C.

SAPONIFICATION OF SULFONIC ACID ESTERS IN AQUEOUS SOLUTION

Titrimetric method; $k = k_w + [H^+]k_s + [OH^-]k_a$; units: minutes and M/l; $\theta = 25^\circ\text{C}$ (408, 542)

$[H^+]k_s$ even in rather strongly acid solution is vanishingly small in comparison with the constant, k_w , of water saponification.

$$k_w = 0.0007015; k_a = 0.05275$$

In the presence of halogen ion, X⁻, the accompanying reaction:

also proceeds according to:

$$\frac{dx}{dt} = k_0[X^-](a - x)$$

X ⁻	Cl ⁻	Br ⁻	I ⁻
k_0 , 25°C.....	0.00139	0.00513	0.0398

In the presence of alcohol, *cf.* (408.5), the following proceeds as a further accompanying reaction:

SAPONIFICATION OF SULFURIC ACID ESTERS

The first reaction follows the same law as for the saponification of sulfonic acid esters (301.5).

In aqueous solution at 60°C, with units of M/l and hours, $k_a = 0.00209$ for alkaline saponification according to the second stage of saponification (340.5).

SAPONIFICATION OF CARBONIC ACID ESTERS IN AQUEOUS SOLUTION

Titrimetric method; units: minutes and M/l; $\theta = 25^\circ\text{C}$ (452, 458); constant for alkaline saponification

R.....	CH ₃	C ₂ H ₅
k_a	7.0	1.6

k_a and k_w are immeasurably small.

Esterification

The velocity of esterification is retarded by water (220, 542.5).

Esterification in Ethyl Alcohol with HCl as Catalyst at 25°C

First-order k for minutes; c = concentration of HCl in M/l; w = concentration of H₂O in M/l; titrimetric method (287, 290, 292, 293).

$$\frac{2.303}{60k} = 5.78 + \frac{13.24}{c} + \left(-35.36 + \frac{59.26}{c} - \frac{4.778}{c^2} + \frac{1.707}{c^3} \right) (w - 0.013) + \left(16.98 - \frac{24.80}{c} + \frac{38.35}{c^2} - \frac{3.679}{c^3} \right) (w - 0.013)^2$$

$$c = 0.15 - 0.8; w = 0.03 - 2.26$$

Trichloroacetic acid

$$\frac{2.303}{60k} = 6.554 + \frac{4.850}{c} + \frac{0.0985}{c^2} + \left(-40.15 + \frac{35.39}{c} - \frac{0.9550}{c^2} \right) (w - 0.013) + \left(16.90 + \frac{12.98}{c} - \frac{1.259}{c^2} \right) (w - 0.013)^2$$

$$c = 0.16 - 0.67; w = 0.04 - 1.3$$

Tannic acid

$$\frac{2.303}{60k} = -3.33 + \frac{49.07}{c} - \frac{2.916}{c^2} + \left(61.1 - \frac{23.40}{c} + \frac{25.02}{c^2} \right) (w - 0.013) + \left(-276.6 + \frac{260.6}{c} - \frac{10.02}{c^2} \right) (w - 0.013)^2$$

$$c = 0.16 - 0.67; w = 0.04 - 1.3$$

For dibasic acids, the first-order k is calculated on the equivalent basis.

Succinic acid

$$\frac{2.303}{60k} = 0.0758 + \frac{0.19146}{c} - \frac{0.0053507}{c^2} + \frac{0.000045457}{c^3} + \left(-1.0875 + \frac{0.73858}{c} + \frac{0.085448}{c^2} - \frac{0.00075172}{c^3} \right) w + \left(-0.0327 + \frac{0.50665}{c} - \frac{0.028853}{c^2} + \frac{0.00025145}{c^3} \right) w^2$$

$$c = 0.01 - 0.67; w = 0.002 - 1.4$$

Fumaric acid

$$\frac{60k}{2.303} = 0.869 + \frac{1.074}{c} - \frac{0.01946}{c^2} + \left(-4.009 + \frac{2.893}{c} + \frac{0.8231}{c^2} \right) w + \left(-1.187 + \frac{3.425}{c} + \frac{0.1134}{c^2} \right) w^2$$

$$c = 0.16 - 0.66; w = 0.002 - 1.4$$

Tartaric acid

$$\frac{2.303}{60k} = 0.446 + \frac{0.4999}{c} - \frac{0.006107}{c^2} + \left(-1.598 + \frac{1.292}{c} + \frac{0.3286}{c^2} \right) w + \left(-2.069 + \frac{2.818}{c} - \frac{0.09158}{c^2} \right) w^2$$

$$c = 0.16 - 0.67; w = 0.002 - 1.4$$

Esterification in Glycerol with HCl as Catalyst at 25°C

Benzoic acid

$$\frac{2.303c}{60k} = 21.74 + 140.2w - 65.32w^{3/2}$$

$$c = 0.08 - 0.24; w = 0.03 - 2.0$$

n-Butyric acid

$$\frac{2.303c}{60k} = 0.6072 + 0.5811w + 0.07628w^{3/2}$$

$$c = 0.04 - 0.2; w = 0.03 - 1.35$$

Esterification in Ethyl Alcohol at 25°C without Catalyst

a = concentration of acid (in equivalents).

$$k_2 = \frac{1}{ta} \times \frac{x}{(a-x)}; \text{bimolecular constant}$$

$$k_2 = \frac{2}{t} \left(\frac{1}{\sqrt{a-x}} - \frac{1}{\sqrt{a}} \right); \text{sesquimolecular constant}$$

Acid	$10^5 k_2$	$10^5 k_2$	<i>a</i>	<i>w</i>
Mandelic.....	0.8		0.4 - 0.7	0.03 - 0.1
Trichloroacetic.....	11.0		0.14 - 0.57	0.1 - 0.2

DYNAMICS OF HYDROLYSIS OF γ -LACTONES IN AQUEOUS SOLUTION

$$\frac{dx}{dt} = k_1(a - x) - k_2x$$

$$t = \infty; x = \xi = \frac{ak_1}{k_1 + k_2}$$

$$k_1 + k_2 = \frac{1}{t} \log_e \frac{\xi}{\xi - x}$$

 $K = \frac{k_1}{k_2} = 1.10$, equilibrium constant.

HYDROLYSIS OF γ -LACTONES—(Continued)

Titrimetric method; units: hours and M/l; catalyst, HNO_3 ;
 $a = 0.025$; $\theta = 25^\circ\text{C}$ (268)

$N \text{ HNO}_3$	$(k_1 + k_2)^*$	$(k_1 + k_2)^\dagger$
0.0125	0.014	0.014
0.0250	0.031	0.0305

$$k_1 = 0.58 [\text{H}^+], k_2 = 0.53 [\text{H}^+], K = \frac{0.58}{0.53} = 1.1.$$

* From lactonization of itamalic acid.

† From hydrolysis of paraconic acid.

Titrimetric or conductivity method; units: minutes and M/l;
 $\theta = 25^\circ\text{C}$ (195, 246, 282, 291, 509)

C = concentration of catalyst.

$$k_1 = [\text{H}^+]k_l, k_2 = [\text{H}^+]k_s, [\text{H}^+] = C.$$

$$K = \frac{k_l}{k_s} = \frac{[\text{Lactone}]}{[\text{Hydroxy acid}]}, \text{equilibrium constant.}$$

$$K \text{ for butyrolactone} = 2.683 \text{ (246)}; = 2.66 \text{ (291)}; \text{mean} = 2.67.$$

$$K \text{ for valerolactone} = 13.71 \text{ (246)}; = 13.86 \text{ and } 13.7 \text{ (291)}; \\ = 11.5 \text{ (509)}; = 15.7 \text{ (195)}; \text{mean} = 13.8.$$

Reaction without Catalyst

If α is the degree of dissociation of the hydroxy acid, κ its dissociation constant, then, under the assumption that only the undissociated hydroxy acid is converted to lactone:

$$\frac{dx}{dt} = k_l\alpha(1 - \alpha)(a - x)^2 - k_s\alpha(a - x)x$$

$$\alpha^2(a - x) = (1 - \alpha)\kappa; \text{ or, since } 1 \gg \alpha, \alpha = \sqrt{\frac{\kappa}{a - x}}$$

$$k_l + k_s = \frac{1}{t \sqrt{1 + K}} \times$$

$$\log_e \left(\frac{\sqrt{\frac{a}{1 + K}} + \sqrt{a - x}}{\sqrt{\frac{a}{1 + K}} - \sqrt{a - x}} \right) \left(\frac{\sqrt{\frac{a}{1 + K}} - \sqrt{a}}{\sqrt{\frac{a}{1 + K}} + \sqrt{a}} \right)$$

$$\kappa = 1.94 \times 10^{-5} \text{ for } \gamma\text{-hydroxybutyric acid}; \kappa = 0.202 \times 10^{-5} \text{ for } \gamma\text{-hydroxyvaleric acid.}$$

Reaction 1 (291)

a	0.04295	0.0617	0.1297	0.1429	0.1789
$k_l + k_s$	0.153	0.148	0.146	0.144	0.144

Mean: 0.148.

Reaction 2 (291): $k_l + k_s = 0.0509$.

Reaction with HCl (HNO_3) as Catalyst

$$\frac{dx}{dt} = k_l C (a - x) - k_s C x$$

$$k_l + k_s = \frac{1}{tC} \log_e \frac{\xi}{\xi - x}; x = \xi \text{ for } t = \infty$$

Means of all determinations

Reaction	$k_l + k_s$	K	k_l	k_s
1	0.156	13.8	0.145	0.0106
2	0.0506	2.67	0.0368	0.0138

For the effect of temperature, the use of activity in place of concentration, the effect of electrolytes (KCl , LiCl) and of non-electrolytes (sugar) on the velocity, see the original literature.

DYNAMICS OF ACETALIZATION EQUILIBRIUM

Acetalization of diols by acetone at constant concentrations of water and acetone with HCl as catalyst:

$$K = \frac{k_1}{k_2}$$

$$k_1 + k_2 = \frac{1}{t} \log_e \frac{\xi}{\xi - x}; x = \xi \text{ for } t = \infty$$

Titrimetric method; units: hours and M/l (247)

$$\log_e k = -\frac{E}{RT} + J$$

A: *cis*-1, 2-Hydrindenediol

B: Tetrahydronaphthalenediol

$\text{C}_6\text{H}_5\text{CH}(\text{OH})\text{CH}(\text{OH})\text{C}_6\text{H}_5$, Hydrobenzoin

D: *dl*-Hydrobenzoin (inactive analog of antitartaric acid)

E: *r*-Hydrobenzoin (inactive analog of racemic acid)

Solvent and catalyst:	$[\text{H}_2\text{O}]:[(\text{CH}_3)_2\text{CO}]$	$[\text{HCl}]$
For the three cyclic diols	2.310	0.00018
For the two hydrobenzoin	0.9809	0.0106

Diol:	A	B	C	D	E
$k_1, 24.9^\circ$	0.0138	0.00644	0.00144	0.00263	0.0230
$k_1, 44.5^\circ$	0.0736	0.0396	0.0123	0.0212	0.130
$k_2, 24.9^\circ$	0.00160	0.00122	0.000522	0.00598	0.00269
$k_2, 44.5^\circ$	0.0150	0.0125	0.00712	0.0793	0.0304
k_1, E	16 100	17 500	20 600	20 200	16 700
k_1, J	22.7	24.3	28.1	27.9	24.3
k_2, E	21 600	22 500	25 100	23 900	21 900
k_2, J	29.7	31.0	34.6	35.0	30.8
k_1, Q_{10}^\dagger	2.23	2.36	2.76	2.69	2.26
k_2, Q_{10}^\dagger	2.90	3.06	3.49	3.27	2.94

* For D and E the temperature is 25.0°C .

† Q_{10} holds for the interval $25\text{--}35^\circ\text{C}$.

On account of the equilibrium position, the measurements of $(k_1 + k_2)$ for A, B and E were made starting from the diol; for C and D from the acetonal. For the dynamics of acetalization of CH_2O with various alcohols, see (145).

Hydrolysis of Nitriles, Acid Amides and the Inverse Reactions

HYDROLYSIS OF ACETAMIDE IN AQUEOUS SOLUTION

($a - x$)

$$\frac{dx}{dt} = k_s [\text{H}^+](a - x) + k_a [\text{OH}^-](a - x)$$

Titrimetric and gas-volumetric methods; t in minutes (173, 402);
 cf. (13, 129, 295, 395, 414)

Constant	Value	$^\circ\text{C}$	Lit.
k_a	0.0024	25	(402)
k_s	0.000377	25	
k_a^*	0.00777	49.3	(173)
k_s^*	0.0223	64.3	

* $E = 15,400$.

For dynamics of equilibrium in glacial acetic acid solution, see (387).

HYDROLYSIS OF ACETANILIDE IN AQUEOUS SOLUTION

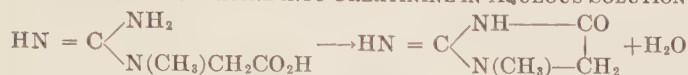

(a - x)

$$\frac{dx}{dt} = k_a[\text{H}^+](a - x) + k_b[\text{OH}^-](a - x)$$

Titrimetric method; t in hours; $\theta = 100^\circ\text{C}$; $k_a = 8.4 \pm 0.1$ (358);
 $k_b = 3.2$ (137)

In NaOH and HCl solution the reaction runs to completion; in $\text{CH}_3\text{CO}_2\text{H}$ solution it is perceptibly reversible.

CONVERSION OF CREATINE INTO CREATININE IN AQUEOUS SOLUTION

The reaction is reversible. In strongly acid solution it runs to completion.

Titrimetric method; first-order k for t in minutes; if $[\text{HCl}] \gg a$, $[\text{H}^+] = \text{constant}$; a = initial concentration of creatine in M/l (161).

$^\circ\text{C}$	[HCl]	a	10^2k	Q_{10}
25	0.38	0.0075	0.00340	
57	0.38	0.0300	0.0777	2.66

KINETICS OF THE COUPLING PROCESS IN AQUEOUS SOLUTION

Gas-volumetric determination of diazonium salt; units: minutes and M/l (208, 209, 211, 212, 214).

Formation of Aminoazo Compounds in Strongly Acid (HCl) Solutions

κ = hydrolysis constant of amine salt.

ξ = concn. of free amine.

$$\xi = \kappa \frac{(a-x)}{(b+x)}$$

The diazonium salt and free amine react, therefore, as follows:

$$\frac{dx}{dt} = k\xi(c-x) = k\kappa \frac{(a-x)(c-x)}{(b+x)}$$

k = bimolecular constant.

Diazonium salt	Salt of amine	°C	$k\kappa$
<i>p</i> -N ₂ C ₆ H ₄ SO ₃ O	$C_6H_5N(CH_3)_2$	20	0.0053

(a - x)

$(\text{CH}_3)_2\text{NC}_6\text{H}_4\text{N}_2\text{C}_6\text{H}_4\text{SO}_3\text{H} + \text{HA}$
 ppt. (b + x)

 κ = hydrolysis constant of amine salt. ξ = concn. of free amine. δ = dissociation constant of acid, HA.If b is sufficiently great with respect to a ($b \gg 10a$), then

$$[\text{H}^+] = \delta \frac{(b+x)}{(a-x)}$$

$$\xi[\text{H}^+] = \kappa \frac{(a-x)}{(a-x)}$$

$$\xi = \frac{\kappa}{\delta} \frac{(a-x)}{(b+x)^2}$$

The diazonium salt and the free amine react, therefore, as follows:

$$\frac{dx}{dt} = k\xi(c-x) = k\frac{\kappa}{\delta} \frac{(a-x)^2(c-x)}{(b+x)}$$

$$k\frac{\kappa}{\delta} = C$$

Between C and $k\kappa$ of the preceding tables, the relation $C = \frac{k\kappa}{\delta}$ must, therefore, hold; whereby C may be calculated from $k\kappa$ and δ .

a - x

b - x

x

$$\frac{dx}{dt} = k(a-x)(b-x)$$

The bimolecular constant varies with the dilution, V , in l/M, from which it follows that phenolate and phenolate ion react with different velocities:

$$-d[\text{R}'\text{X}] = (k_i[\text{RO}^-] + k_m[\text{RONa}])[\text{R}'\text{X}]dt$$

or, if k_v is the bimolecular constant and α the degree of dissociation at the dilution, V :

$$k = V k_v = k_i \alpha + k_m (1 - \alpha)$$

$$\frac{k}{V} = k_v = \frac{a}{(b-a)t} \log_e \frac{a(b-x)}{b(a-x)}$$

Titrimetric method; units: minutes and M/l; solvent, $\text{C}_2\text{H}_5\text{OH}$ (abs.) (0.01–0.03 % H_2O) (108); cf. (10, 11, 12, 14, 95, 354, 384, 426, 442, 493).

RONa	R'I	°C	k_i	k_m	$k_i:k_m$
$\text{C}_6\text{H}_5\text{ONa}$	CH_3I	25	0.0282	0.00474	5.95

$\text{C}_2\text{H}_5\text{I}$, 10% k		414.2(20°)

The relative constant, k , referred to any RI as unit is dependent upon T , since in the equation:

$$k = e^{-\frac{A}{T}} + I = e^I e^{-\frac{A}{T}} = k_0 e^{-\frac{A}{T}}$$

the A 's for various RI's are different. For $T = \infty$, $k = k_0$ is the limiting velocity. The relative limiting velocities are independent of T .

Titrimetric method; units: hours and M/l, $\theta = 50 \pm 0.1^\circ\text{C}$; $a = b = 0.02 - 0.025$ (416)

0.05	0.05	0.01	0.25	0.15

CN⁻ CATALYSIS OF THE BENZOIN SYNTHESIS

a - x

$$dx = k(a - x)^2dt; k = k_1[\text{CN}^-]$$

Gravimetric method; units: minutes and M/l (82, 500); solvent: $10\text{ cm}^3\text{ H}_2\text{O} + 20\text{ cm}^3\text{ C}_2\text{H}_5\text{OH}$; $k_1 = 0.089(0.085\text{ to }0.092)$ at 60°C ; $A = 6572$.

Effect of solvent at 60°C and $[\text{CN}^-] = 0.1$

$\text{cm}^3\text{H}_2\text{O}$	$\text{cm}^3\text{C}_2\text{H}_5\text{OH}$	100k	$\text{cm}^3\text{H}_2\text{O}$	$\text{cm}^3\text{CH}_3\text{OH}$	100k
5	25	0.87	5	25	0.45
15	15	1.16	10	20	0.65
20	10	1.24	15	15	0.91

NITRILE FORMATION IN THE MELT

(1 - x)

(1 - x)

$$dx = k(1 - x)^2dt$$

Method: temperature of primary crystallization of system.

$k = 0.053(0.050\text{ to }0.055)$ at 98°C ; t in hours (318). For methods, see further (316, 317, 317.5, 318.5).

CHLORINATION OF NITROBENZENE (AS SOLVENT)

$$-d[\text{Cl}_2] = kC[\text{Cl}_2]dt$$

Titrimetric method; t in minutes; C = concn. of catalyst in M/l (213)

Catalyst	k, 50°	k, 100°	Q_{10}
SnCl_4	0.000778		
AlCl_3	0.0239	0.131	1.35

THE FRIEDEL-CRAFTS REACTION

RELATIVE VELOCITY OF SULFONATION OF PHENOLS

If the velocity of sulfonation of phenol is taken as 1, then that for each of the three cresols is as follows (105):

$^\circ\text{C}$	20	40	60	80
<i>o</i> -Cresol	0.773	0.859	0.894	0.905
<i>m</i> -Cresol	1.395	1.362	1.118	0.399
<i>p</i> -Cresol	0.300	0.474	0.573	0.287

m-Cresol: *p*-Cresol = 1.059(100°).

m-Cresol: *m*-4-Xylenol = 3.020(40°); = 1.284(80°).

m-Cresol: *p*-Xylenol = 1.260(40°); = 1.297(80°).

These relationships are important in the separation of phenols in crude carboic acid (355).

NITRATION OF AROMATIC SUBSTANCES (20); cf. (261, 301, 550)

The reaction is autocatalytic, thus:

OXIDATION OF NAPHTHALENE TO PHTHALIC ACID BY MEANS OF H_2SO_4 

Gas-volumetric method; solvent, H_2SO_4 ; monomolecular k for t in minutes, $k' = 0.4343k$; mixture: 40 cm³ H_2SO_4 ; 0.0480 g C_{10}H_8 ; 0.28 g Hg_2SO_4 as catalyst (70, 94).

$^\circ\text{C}$	300	275	250	225
$10^5k'$, without catalyst	ca. 178	21	2.2	
$10^5k'$, with catalyst	ca. 800	165	26	2.8

Slight amounts of water are without appreciable influence. CuSO_4 is a less satisfactory catalyst than Hg_2SO_4 ; the simultaneous action of both catalysts is more than additive. With increase of temperature, the uncatalyzed reaction gains the upper hand.

REDUCTION OF AZO COMPOUNDS BY SnCl_2 IN AQUEOUS HCl (RESP. BY SnBr_2 IN AQUEOUS HBr)

Colorimetric method; units: minutes and M/l; $\theta = 25^\circ\text{C}$ (205)

Reduction with SnCl_2 and HCl :

$$-d[\text{XN}_2\text{Y}] = k_0[\text{XN}_2\text{Y}][\text{SnCl}_2]dt$$

$$k_0 = k[\text{H}^+][\text{Cl}^-]^2$$

$$k_0 = k_1[\text{Cl}^-] + k_2[\text{H}^+][\text{Cl}^-]^2$$

$$k_0 = k_3[\text{Cl}^-]$$

$$k_0 = k_4 + k_5[\text{Cl}^-]$$

XN_2Y	k	k_1	$10^{-2}k_2$	k_3	k_4	k_5

Ponceau 4GB					1.8	23.9
Ponceau G					6.7	10.7
Ponceau 2R					1.15	1.45

Reduction with SnBr_2 and HBr :

$$-d[\text{XN}_2\text{Y}] = k_0[\text{XN}_2\text{Y}][\text{SnBr}_2]dt$$

$$k_0 = k[\text{Br}^-]^2$$

$$k_0 = k_1[\text{H}^+][\text{Br}^-]^2$$

$$k_0 = k_2 + k_3[\text{Br}^-]$$

XN_2Y	$10^{-2}k$	$10^{-2}k_1$	k_2	k_3
<i>m,m'</i> -Azobenzenedisulfonic acid	12.1			
Dimethylaminoazobenzene			9.48	
Diethylaminoazobenzene			23.9	
Benzeneazo- β -naphthol-3, 6-disulfonic acid				30.157

For the reduction of nitro compounds by SnCl_2 , see (202, 210, 219, 302).

HYDROLYSIS OF AMINO ACIDS IN AQUEOUS SOLUTION AT 100°C (561)

The reaction takes place only with animal charcoal as catalyst. No hydrolysis is observed in the absence of catalyst.

The reaction proceeds to the equilibrium:

$$[\text{CH}_3\text{CH}(\text{OH})\text{CO}_2^-][\text{NH}_4^+] = K_E[\text{CH}_3\text{CH}(\text{NH}_2)\text{CO}_2\text{H}]$$

But the kinetics of the process corresponds to a reaction without reversal:

$$dx = k(a - x - x)dt.$$

$$k = \frac{1}{t} \log_e \frac{a - x}{a - x - x} \text{ for } t \text{ in minutes.}$$

$$k' = 0.4343k.$$

a = initial concentration of amino acid in M/l.

x = equilibrium concentration, or, more exactly, concentration of amino acid at the end of the reaction.

Alanine			Aspartic acid		
a	1: K_E	100 k'	a	1: K_E	100 k'
0.0422	56.8	6.4 — 5.3	0.0315	18.5	3.9 — 5.4
0.080	73.5	7.1 — 5.8	0.0593	15.4	6.7 — 6.5
0.116	77.0	7.6 — 6.1	0.0795	17.9	7.3 — 6.9

For further examples of one-sided equilibria and for the theory, see (32, 565).

Inorganic Oxidation-Reduction Reactions

The symbols in square brackets denote concentration in M/l, in parentheses, the analytic or total concentration in M/l.

Examples:

DECOMPOSITION OF $\text{Na}_2\text{S}_2\text{O}_4$ IN AQUEOUS SOLUTION

$$a - x \quad \quad \quad c = \text{constant}$$

$$dx/dt = kc^2(a - x)^2$$

Titrimetric method; t in minutes; c and a in g/100 g soln.; values of kc^2 for $c = 15$ (278.5).

$^\circ\text{C}$	0	10	20	30
10^4kc^2	1.4	2.3	3.7	6.3

$$Q_{10}(0 - 30^\circ) = 1.65.$$

Recalculated to M/l: $-d(\text{Na}_2\text{S}_2\text{O}_4) = 0.003(\text{NaHSO}_3)^2 \times (\text{Na}_2\text{S}_2\text{O}_4)^2 dt (20^\circ).$

DECOMPOSITION OF NITROUS ACID IN AQUEOUS SOLUTION

Titrimetric method; first-order k for t in minutes; R = velocity in liters per minute of the inert gases (N_2 , H_2) which are bubbled through the solution (302.5). The process defining the velocity is the escape of NO from the system. For more recent data, *v.* (8.5, 564).

$^{\circ}\text{C}.$	15	15	15	15	30	30
R	0.56	0.93	0.56	0.77	0.03	0.77
$[\text{HNO}_2]$	1.185	1.185	3.626	3.626	3.626	3.626
$100k$	3.7	4.5	5.0	8.0	1.2	1.0

CATALYTIC DECOMPOSITION OF $\text{K}_2\text{S}_2\text{O}_8$ AT 18°C IN AQUEOUS SOLUTION CATALYZED BY AgNO_3 

$$-d[\text{S}_2\text{O}_8^{2-}] = k[\text{Ag}^+][\text{S}_2\text{O}_8^{2-}]dt$$

Titrimetric method; t in minutes (253).

$[\text{Ag}^+]$	$k[\text{Ag}^+]$	k
0.004	0.00079	0.20
0.01	0.00210	0.21
0.02	0.00375	0.19

Mean $k = 0.20$.

DECOMPOSITION OF $\text{H}_2\text{S}_2\text{O}_8$ IN AQUEOUS SOLUTION OF H_2SO_4 AT 50°C

A first-order reaction in two stages with reversal:

$(\text{H}_2\text{SO}_4) = \text{constant}$

Titrimetric method; t in seconds (397).

(H_2SO_4)	$100k_1$	$1000k_3$	10^6k_4	$k_1:k_3$	$k_1:(\text{H}_2\text{SO}_4)$
5.00	8.758	2.244	4.5	39.0	0.01752
3.76	3.026	0.760		39.8	0.00804
2.50	1.043	0.262		39.8	0.00418

k_2 is measurable only at very high (H_2SO_4) . For the above computations of k_1 and k_3 , k_2 and k_4 were taken as zero.

To a slight extent the following simultaneous reactions take place:

$$\frac{d[\text{O}_2]}{dt} = k_5 [\text{H}_2\text{SO}_5] [\text{H}_2\text{O}_2] + k_6 [\text{H}_2\text{SO}_5]^2$$

(H_2SO_4)	10^6k_5	10^7k_6
5.00	4.3	9
3.76	8.9	9
2.50	53.0	112

The loss of active oxygen through evolution of O_2 increases greatly with decreasing (H_2SO_4) . For strongly acid solution it is negligible.

ACTION OF PERSULFATE ON IODINE IN AQUEOUS SOLUTION

Titrimetric method; t in minutes (409).

$$-d[\text{S}_2\text{O}_8^{2-}] = 0.16[\text{S}_2\text{O}_8^{2-}][\text{I}^-]dt \text{ at } 25^{\circ}\text{C}$$

OXIDATION OF THIOSULFATE BY H_2O_2 IN AQUEOUS SOLUTION WITH AND WITHOUT CATALYST

Titrimetric method; solvent, acetic acid; t in minutes (2, 2.5).

Catalyst, I^-

$$-d[\text{H}_2\text{O}_2] \frac{dt}{dt} = 1.53[\text{H}_2\text{O}_2][\text{S}_2\text{O}_3^{2-}] + 0.7[\text{I}^-][\text{H}_2\text{O}_2] \text{ at } 25^{\circ}\text{C}$$

Catalyst, Cu^{++}

$$\frac{-d[\text{H}_2\text{O}_2]}{dt} = 1.53[\text{H}_2\text{O}_2][\text{S}_2\text{O}_3^{2-}] + 1.0 \times 10^3[\text{Cu}^{++}][\text{H}_2\text{O}_2] \text{ at } 25^{\circ}\text{C}$$

Catalyst, molybdic acid

$$\frac{-d[\text{H}_2\text{O}_2]}{dt} = \left\{ 0.75 \times 10^3 + 1.75 \times 10^7[\text{H}^+] \right\} [\text{S}_2\text{O}_3^{2-}](\text{MoO}_3) \text{ at } 25^{\circ}\text{C}$$

FORMATION OF IODATE FROM IODINE IN AQUEOUS ALKALINE SOLUTION

Titrimetric method; t in minutes; $\theta = 25^{\circ}\text{C}$ (445, 446, 447, 464).

For the rapid reaction:

$$\frac{-d[\text{I}_3^-]}{dt} = 2.0 \frac{[\text{OH}^-][\text{I}_3^-]^2}{[\text{I}^-]^3} \quad (\text{I})$$

For the slow iodate formation:

$$\frac{-d[\text{I}_3^-]}{dt} = 2.3 \times 10^{11} \frac{[\text{OH}^-]^4[\text{I}_3^-]^3}{[\text{I}^-]^6} \quad (\text{II})$$

$$\frac{-d[\text{I}_2]}{dt} = 4.1 \times 10^{19} \frac{[\text{OH}^-]^4[\text{I}_2]^3}{[\text{I}^-]^3} \quad (\text{III})$$

Values of Q_{10} for I, II, III in various buffer solutions

	Q_{10}			
	NaOH	$\text{Na}_2\text{CO}_3/\text{NaHCO}_3$	$\text{Na}_2\text{HPO}_4/\text{NaH}_2\text{PO}_4$	NaAc/HAc^*
I	3	6		
II	3.6	45		ca. 100
III			50	

* Ac = Acetate radical.

FORMATION OF BROMATE FROM BROMINE IN AQUEOUS ALKALINE SOLUTION

Titrimetric method; t in minutes; $\theta = 25^{\circ}\text{C}$ (483).

For the rapid bromate formation:

$$\frac{-d[\text{Br}_3^-]}{dt} = 6.5 \times 10^4 \frac{[\text{OH}^-][\text{Br}^-]^2}{[\text{Br}^-]^3}$$

For the slow reaction:

$$\frac{-d[\text{Br}_3^-]}{dt} = 3.8 \times 10^{22} \frac{[\text{OH}^-]^4[\text{Br}^-]^3}{[\text{Br}^-]^7}$$

FORMATION OF HALOGENATE IN AQUEOUS SOLUTION OF HYPOHALOGENITE AND HYPOHALOGENOUS ACIDS

Titrimetric method (179, 181, 319); steady state in electrolysis of NaCl (374.5); *cf.* (180, 303, 486).

$$-d[\text{XO}^-] = k[\text{XO}^-][\text{HXO}]^2dt; t \text{ in minutes}$$

XO^-	$k, 15^{\circ}$	$k, 25^{\circ}$
ClO^-	1.12 (374.5)	1.6 (179)
BrO^-		170 (319)

DECOMPOSITION OF HYPOCHLORITE IN STRONGLY ALKALINE SOLUTION

Titrimetric method; bimolecular k ; t in days (149.5, 180).

$$\frac{-d[\text{ClO}^-]}{dt} = k[\text{ClO}^-]^2$$

(NaOH)	0.1	0.5	2.0
$k, 25^{\circ}$	0.0022	0.0023	0.0028*
$k, 50^{\circ}$	0.0455	0.0512	0.08 ↑ *
$k, 90^{\circ}$	4.9*		

* The reaction proceeds with O_2 -evolution as a simultaneous reaction.

Mechanism of the reaction:

Values of bimolecular k_1 and k_2 for 0.1N NaOH; t in hours

°C.....	25	50	Q_{10}
k_1	0.00010	0.0019	3.16
k_2	0.0035	0.050	2.88

For this reaction and the analogous hypobromite reaction, see (112, 198).

DECOMPOSITION OF HYPOBROMITE IN Na_2CO_3 AND NaHCO_3 SOLUTION (445)

Titrimetric method; t in minutes; $\theta = 25^\circ$

$$\frac{-d(\text{NaBrO})}{dt} = 2 \times 10^{-4} \frac{[\text{Br}^-](\text{NaBrO})^2}{[\text{OH}^-]}$$

DECOMPOSITION OF HYPOIODITE IN STRONGLY ALKALINE SOLUTION

Titrimetric method; t in minutes; $\theta = 25^\circ\text{C}$ (444, 445, 446, 466); cf. (96, 118, 182, 339, 404, 438).

For solution rich in I^- :

$$\frac{-d(\text{NaIO})}{dt} = 87 \frac{[\text{I}^-](\text{NaIO})^2}{[\text{OH}^-]}; \quad Q_{10} = 2.1$$

For solution poor in I^- :

$$\frac{-d(\text{NaIO})}{dt} = 2 \frac{(\text{NaIO})^2}{[\text{OH}^-]}; \quad Q_{10} = 2.5$$

HYDROLYSIS OF FREE THIOCYANATE (48)

Titrimetric method; t in minutes; $\theta = 18^\circ\text{C}$.

$$\frac{-d[(\text{CNS})_2]}{dt} = 5 \frac{[(\text{CNS})_2]^2}{[\text{H}^+]^2[\text{CNS}^-]^2}; \quad Q_{10} = 2.84$$

(preliminary equilibrium)

(rate-determining velocity)

(net reaction)

The hydrolysis of free thiocyanate determines also the velocity of auto-reduction of $\text{Au}(\text{CNS})_4^-$:

HYDROLYSIS OF CHLORINE DIOXIDE, ClO_2

Titrimetric method; t in minutes (63, 64).

$$\frac{-d[\text{ClO}_2]}{dt} = k[\text{ClO}_2]^2[\text{Cl}^-] + k_1[\text{ClO}_2]^2[\text{Cl}^-][\text{H}^+]$$

$$k = 0.056 \text{ at } 60^\circ\text{C}; \quad Q_{10} = 2.25$$

$$\frac{-d[\text{ClO}_2]}{dt} = k[\text{ClO}_2]^2[\text{OH}^-]$$

$$k = 300 \text{ at } 0^\circ\text{C}; = 950 \text{ at } 19^\circ\text{C}; \quad Q_{10} = 1.8$$

DECOMPOSITION OF CHLORIC ACID BY HCl

Method: Removal of reaction products by a stream of inert gas; t in minutes; $\theta = 50^\circ\text{C}$ (348).

$$-d[\text{ClO}_3^-] = 0.001[\text{ClO}_3^-]^2[\text{Cl}^-]^2[\text{H}^+]^4 dt$$

REDUCTION OF IODIC ACID BY HYDROIODIC ACID

Titrimetric method; t in minutes (159).

$$\frac{-d[\text{IO}_3^-]}{dt} = k_1[\text{IO}_3^-][\text{H}^+]^2[\text{I}^-]^{1.9} + k_2[\text{IO}_3^-][\text{H}^+]^2[\text{I}^-][\text{I}_3^-]$$

H^+ buffer: acetic acid + acetate

°C.....	0	14	37	0*
$10^{-10}k_1$	2.54	3.90	5.90	0.84
$10^{-10}k_2$	1.70			0.32

* These values at 0°C were obtained in mineral acid solution.

At $\theta = 25^\circ$, $k_1 = 5.33 \times 10^{10}$ (432); $= 5.29 \times 10^{10}$ (447).

$$\frac{-d[\text{IO}_3^-]}{dt} = [\text{IO}_3^-][\text{I}^-][\text{H}^+]^2\{7.6[\text{I}^-] + 5.5[\text{I}_3^-]\} \times 10^{10} \text{F at } 25^\circ\text{C}$$

$\text{F} = 10^{-2.20\sqrt{\text{I}}}$ for H_2SO_4 solution.

$\text{F} = 10^{-0.20\sqrt{\text{I}+0.50\text{I}}}$ for $\text{CH}_3\text{CO}_2\text{H}$ solution.

Where $\text{I} = \sum \text{C}_i \text{Z}_i^2 =$ ion concentration according to the theory of (9).

REDUCTION OF HALOGENATE BY HALIDE IN ACID SOLUTION, WITH OR WITHOUT REMOVAL OF THE REACTION PRODUCTS BY MEANS OF H_3AsO_3 OR H_2SO_3

Titrimetric method or simultaneous kinetics of the Landolt reaction; t in minutes; $\theta = 25^\circ\text{C}$.

$$\frac{-d[\text{XO}_3^-]}{dt} = Kf(c); \quad \text{X} = \text{Cl}, \text{Br}, \text{I}$$

No.	$f(c)$	K	Q_{10}	Lit.

REDUCTION OF IODIC ACID BY SULFUROUS ACID

The reaction is the initial step of the Landolt reaction; cf. (162, 163, 330.5, 486, 510, 511).

For the region of $[\text{H}^+] = 10^{-3}$ with t in seconds and $\theta = 16^\circ\text{C}$ (455):

$$\frac{-d[\text{IO}_3^-]}{dt} = 0.34 \times 10^3 (\text{SO}_3^{--})[\text{IO}_3^-][\text{H}^+]; \quad Q_{10} = 1.3$$

Simultaneous reactions:

In the range $[\text{H}^+] = 10^{-4}$ to 10^{-13} , for t in minutes at 25°C (486) the rate law is:

$$\frac{-d[\text{IO}_3^-]}{dt} = 0.53 \times 10^6 [\text{H}^+][\text{HSO}_3^-][\text{IO}_3^-] + 0.67 \times 10^{17} [\text{H}^+]^2 [\text{SO}_3^{--}]^2 [\text{IO}_3^-]$$

REDUCTION OF PERIODATE IN ACETIC ACID SOLUTION

Titrimetric method; t in minutes; $\theta = 25^\circ\text{C}$ (7).

$$-d[\text{IO}_4^-] = 5.5[\text{IO}_4^-](\text{AsO}_2^-)dt$$

Acetic acid-acetate buffer; measured quantities of HAsO_2 present; method depended upon determination of time of first appearance of iodine color; for t in minutes at 25°C (8).

$$-d[\text{IO}_4^-] = k[\text{IO}_4^-][\text{I}^-]dt$$

$k = 380$ to 545 according to the salt content.

REDUCTION OF POTASSIUM DICHROMATE BY HYDROIODIC ACID

Titrimetric method; t in minutes; $\theta = 0^\circ\text{C}$ (146, 199, 252).

$$\frac{-d[\text{I}_3^-]}{dt} = 10^3 (\text{Cr}_2\text{O}_7^{--})[\text{H}^+]^2[\text{I}^-] + 0.25 \times 10^3 (\text{Cr}_2\text{O}_7^{--})[\text{H}^+][\text{I}^-]^2; \quad Q_{10} = 1.4.$$

REDUCTION OF ARSENIC ACID BY HYDROIODIC ACID AND THE REVERSE REACTION

Titrimetric method; t in minutes; $\theta = 0^\circ\text{C}$ (427.5); cf. (58, 62); for the determination of the equilibrium constant at 25°C , v. (539).

$$\frac{d[\text{I}_3^-]}{dt} = k_1(\text{H}_3\text{AsO}_4)[\text{I}^-][\text{H}^+] - k_2\frac{(\text{H}_3\text{AsO}_3)[\text{I}_3^-]}{[\text{I}^-]^2[\text{H}^+]}$$

$$k_1 = 3 \times 10^{-3}; Q_{10} = 2.2.$$

$$k_2 = 4.7 \times 10^{-4}; Q_{10} = 3.5.$$

The equilibrium constant, K , for 0°C then becomes:

$$\frac{(\text{H}_3\text{AsO}_4)[\text{I}^-]^3[\text{H}^+]^2}{(\text{H}_3\text{AsO}_3)[\text{I}_3^-]} = \frac{k_2}{k_1} = K = 0.16$$

A PERIODIC REACTION IN HOMOGENEOUS SOLUTION (65); cf. (315, 342)

The periodicity refers to the iodine determined by colorimetric method in the following reaction mixture (M/l) at 25°C :

After 29 days the concentration of H_2O_2 had decreased to about 93%; see figure below.

The following reactions also take place in the mixture:

Reactions (1) and (2) catalyze (3).

The periodic evolution of oxygen was demonstrated at 60°C in a narrow range of H^+ concentrations.

A REACTION WITH A STEADY STATE

Aqueous solution of H_2O_2 , Br_2 , Br^- in $0.2N$ H_2SO_4 ; titrimetric method; units: minutes and M/l; $\theta = 25^\circ\text{C}$ (66, 66.5, 111, 341); cf. (342). Simultaneously:

Addition of (1) and (2) gives:

Reaction (1) and (2) proceed independently of each other. If their velocities are equal, $[\text{Br}^-]$, $[\text{Br}_2]$ and $[\text{H}^+]$ are constant, and therefore independent of time, and the net result is only the velocity of (3). Measurement in this steady state gives:

$$\left. \begin{aligned} \frac{-d[\text{H}_2\text{O}_2]}{dt} &= k[\text{H}_2\text{O}_2][\text{H}^+][\text{Br}^-] \\ k &= 0.0140 \end{aligned} \right\} \quad (4)$$

In the steady state, moreover, the following relation holds:

$$\frac{\text{Br}_2}{[\text{H}^+]^2[\text{Br}^-]^2} = R = 0.20 \quad (5)$$

The time law for the simultaneous reactions (1) and (2) is:

$$\frac{-d[\text{H}_2\text{O}_2]}{dt} = k_1[\text{H}_2\text{O}_2][\text{H}^+][\text{Br}^-] + k_2\frac{[\text{H}_2\text{O}_2][\text{Br}_2]}{[\text{H}^+][\text{Br}^-]} \quad (6)$$

$$\frac{d[\text{Br}_2]}{dt} = k_1[\text{H}_2\text{O}_2][\text{H}^+][\text{Br}^-] - k_2\frac{[\text{H}_2\text{O}_2][\text{Br}_2]}{[\text{H}^+][\text{Br}^-]} \quad (7)$$

With the numerical values:

$$\left. \begin{aligned} k_1 &= 0.0074 \\ k_2 &= 0.035 \end{aligned} \right\} \quad (8)$$

Addition of (6) and (7) gives:

$$\frac{-d[\text{H}_2\text{O}_2]}{dt} + \frac{d[\text{Br}_2]}{dt} = 2k_1[\text{H}_2\text{O}_2][\text{H}^+][\text{Br}^-] \quad (9)$$

or, for the steady state:

$$\left. \begin{aligned} \frac{d[\text{Br}_2]}{dt} &= 0 \\ \frac{-d[\text{H}_2\text{O}_2]}{dt} &= 2k_1[\text{H}_2\text{O}_2][\text{H}^+][\text{Br}^-] \end{aligned} \right\} \quad (10)$$

From (10) and (4) it follows that:

$$k = 2k_1 = 2 \times 0.0074 = 0.0148 \quad (11)$$

in satisfactory agreement with the directly measured value, $k = 0.014$.

It further follows from (7) for the steady state:

$$\frac{[\text{Br}_2]}{[\text{H}^+]^2[\text{Br}^-]^2} = \frac{k_1}{k_2} = \frac{0.0074}{0.035} = 0.21 = R \quad (12)$$

in agreement with the observed value, $R = 0.20$.

Probable mechanism of reactions (1) and (2):

INTRODUCTION

The following standard works and monographs, used in composing these tables, should be consulted in the first instance for further information on this subject. The periodical literature is so extensive that only a very small part of it could be cited here.

Arrhenius, *Immunochemie. Anwendungen der physikalischen Chemie auf die Lehre von den physiologischen Antikörper.* Leipzig, Akadem. Verlagsges., 1907.

Bayliss, *The nature of enzyme action.* London, Longmans, 1919.

Effront, *Les catalyseurs biochimiques dans la vie et dans l'industrie (fermentes protéolytiques).* Paris, Dunod et Pinat, 1914.

Euler, *Chemie der Enzyme.* München, Bergmann, 1920-22.

Euler and Lindner, *Chemie der Hefe und der alkoholischen Gärung.* Leipzig, Akadem. Verlagsges., 1915.

Falk, *The chemistry of enzyme action.* New York, Chem. Cat. Co., 1924.

Harden, *Alcoholic fermentation.* London, Longmans, 1923.

Michaelis, *Die Wasserstoffionenkonzentration.* Berlin, Springer, 1922.

Oppenheimer, *Die Fermente und ihre Wirkungen.* Leipzig, Vogel, 1913. 5th ed., Leipzig, Thieme, 1924-26.

Zunz, *Fermente.* In Abderhalden, *Biochemisches Handlexikon*, V: 538-665; 11.

SYMBOLS

For explanation of equations and symbols, see p. 115.

HYDROLYSIS OF FATS

LIPASE, RICINUS

Time.—According to Nicloux (127) and Taylor (162) the reaction is monomolecular. According to Connstein (35), $x/\sqrt{t} = k$. In a mixture of 4 g of 0.1% H_2SO_4 + 5 g ric. seed + 6.5 g ric. oil he finds:

<i>t</i> (min)	15	30	45	60	90	150	210	330	1620
<i>x</i>	12	20	30	33	41	54	59	68	81
x/\sqrt{t}	3.11	3.65	4.47	4.26	4.32	4.51	4.07	3.74	2.01

Using 0.02 g ric. lip. + 1 g triolein + 1 cm³ 0.01*N* acetic acid, shaken at 20°C, Jalander (96) finds ($k_1 = \frac{10^4}{t} \log_{10} \frac{a}{a-x}$):

<i>t</i> (min)	10	20	30	60	120	240
cm ³ 0.1 <i>N</i> NaOH	6.76	11.55	15.93	18.85	26.18	28.54
% split	20.39	34.87	48.05	56.86	78.97	86.54
<i>k</i> ₁	100	93	93.9	60.6	56.2	35.7
x/\sqrt{t}	6.4	7.8	8.7	7.3	7.2	5.7

Enzyme Concentration (= *E*).—Jalander (96) finds:

10 ³ <i>E</i>	cm ³ 0.1 <i>N</i> NaOH	% split	%/ <i>E</i>	10 ³ <i>E</i>	cm ³ 0.1 <i>N</i> NaOH	% split	%/ <i>E</i>
1	1.68	4.46	4.46	10	15.63	41.57	4.16
2	3.40	9.04	4.52	15	19.96	53.08	3.54
3	5.20	13.85	4.65	20	22.18	58.99	2.99
4	6.70	17.82	4.45	25	23.05	61.30	2.41
5	8.31	22.10	4.40				

Temperature.—Reaction checked at 50°C (35).

pH.—Optimum at ±5 (76), checked at 3.

Activation.—0.2% $MnSO_4$ activates strongly (16, 35). Bile salts (38) and saponin decrease action. For neutral salts, *v.* (58).

Reversibility.—*v.* (96, 162); *v. also* (59, 68, 91). Jalander (96) finds at 20°C, with 2 min shaking 5 times daily:

Splitting of ester 0.01 g dry ric. lip. + 1.0 g triolein + 1 cm ³ 0.01 <i>N</i> acetic acid			Synthesis of ester 0.01 g dry ric. lip. + 0.957 g oleic acid + 0.104 g glycerol + 1 cm ³ 0.01 <i>N</i> acetic acid		
Days	cm ³ 0.1 <i>N</i> alkali	% oil split	Days	cm ³ 0.1 <i>N</i> alkali	% oleic acid bound
15	29.51	89.02	15	30.31	11.16
30	29.30	88.37	30	30.35	11.04

LIPASE, PANCREATIC

Time.—Using 10 cm³ olive oil + 3.9 cm³ 0.1 *N* alkali + 0.25 cm³ *N* $CaCl_2$ + 1 cm³ pancr. extr. (hog), Kanitz (98) found:

<i>t</i> (min).....	70	140	288	405	1455
<i>x/t</i>	0.131	0.088	0.065	0.057	0.023
x/\sqrt{t}	1.1	1.04	1.12	1.15	0.90

Enzyme Concentration (*E*).—Velocity proportional to *E* (100).
Temperature (100).

°C.....	0	10	20	30
k_{0+10}/k_0		1.50	1.34	1.26
<i>A</i> (cal.).....		6300	4800	4100

pH.—Optimum at 8.3-9 (145).

Activation.—For neutral salts, *v.* (61, 98, 123, 132, 164).

LIPASE OF TISSUE EXTRACTS

Spontaneous increase of activity (128). Ester-hydrolyzing action of tissue and tumor extracts after different time-intervals, preserved at room temperature.

<div>Days</div> <div>Ester</div>		Whole rats						Rabbit livers	
		3.5 days old			22 days old			28 days pregnant	
		0	8	16	0	3	9	0	15

HYDROLYSIS OF CARBOHYDRATES

Starch-Splitting Enzymes

AMYLASE, MALT

Time.—With this and also with the other amylases, no concordant data are to be found, in consequence of the complicated structure of the starch molecule.

According to Brown (25), k of the monomolecular reaction increases rapidly with time.

According to Henri (83) and Euler (51), the monomolecular k is approximately constant; according to Philoche (134, 135), only after 30% of the starch is split.

Substrate Concentration; *v. also* (7, 39, 44, 74, 102, 105, 107, 129, 136, 153, 155, 156, 166).

% starch.....	1	1.5	2	2.5	3
g maltose in 1 hr.....	0.24	0.30	0.338	0.397	0.397

AMYLASE, TAKA (ASPERGILLUS ORYZAE)

Time.—At 31.5°, 1% starch and taka-diastase 1:20 000, Philoche (134) found:

t_1 (min)	21	51	113	224	390
x/a	0.06	0.11	0.15	0.26	0.36
10^4k	12.3	10.0	6.2	5.8	5.0

pH.—Optimum at 4.8 (152).

Activation.—Neutral salts, no definite activation (147, 152). NaCl activates above 0.1 N (174).

AMYLASE, YEAST

pH.—Optimum at 4.5 to 6 (72).

AMYLASE, SALIVA

Time.—Should be monomolecular according to Taylor (163).

Temperature.— $k_{\theta+10}/k_{\theta}$, (20–30°) = 2. $A = 12\ 300$ (168).

Enzyme Concentration.

E	1	2	3	5	Lit.
% maltose in 10 min...	0.077	0.150	0.202	0.385	(55)

pH.—Optimum at 6.0 to 6.4 (40, 72, 75, 115, 142).

Neutral Salts.—(71).

AMYLASE, PANCREATIC

Time.—(83, 101, 133, 134).

pH.—Optimum = 5–7 (Hog); = 6–7.5 (Ox); = 6–8 (Man) (72).

Hydrolysis of Raffinose

RAFFINASE, YEAST

Time.—According to Willstätter (172), $\left(k = \frac{10^5}{t} \log_{10} \frac{a}{a-x}\right)$:

Min	First experiment		Second experiment	
	% split	k	% split	k
10	6.9	310	8.9	404
20	14.5	340	18.5	445
30	21.6	352	24.4	404
45	31.3	362	32.6	381
60	39.4	362	40.5	376
80	48.4	359	49.2	367
110	60.0	362	59.4	356
150			69.5	344
160	72.1	346		
200			77.5	324
220	82.1	340		
260			85.9	327
∞	100.0		100.0	

Enzyme Concentration (172); *cf.* (11).

E (cm ³ in 25) ...	0.25	0.5	1.0	2.5	5.0
t (min)	400	200	100	40	20
% split.....	24.8	25.6	25.6	26.2	26.2

pH.—Per cent split at different pH.

pH	1.5	2.5	3.0	4.0	5.0	6.0	6.5	7.0	7.5	8.0
%	47.5	55.8	58.9	63.3	64.1	58.7	50.5	37.0	14.4	9.4

RAFFINASE, ALMONDS

Time.—Using a 2.3% solution, and 1 g emulsion, at 30°, and pH = 4.2, Willstätter (171) found monomolecular k :

t (hr)	1	2.5	6	9	22.5	26	30.5
% split.....	3.5	8.5	18.0	25.6	55.2	60.5	66.0
10^4k	351	355	330	328	350	356	352

pH.—Optimum at 4.1 (171).

Hydrolysis of Sucrose

INVERTASE, YEAST

Time.— $\left(k = \frac{10^5}{t} \log_{10} \frac{a}{a-x}\right)$ according to Hudson (92):

t (min)	30	60	90	110	130	150
k	558	530	539	534	559	533

According to Michaelis (117):

t (min) ..	0.5	21	60	130	190.2	246.0
x	0.010	0.389	1.074	2.205	3.004	3.590
10^4k		1.45	1.51	1.64	1.71	1.76

According to Nelson and Vosburgh (126):

t (min)	35	80	159.5	265	425	785
% inversion ..	9.42	21.02	39.66	60.02	80.04	94.88
10^4k	1.23	1.28	1.38	1.50	1.65	1.64

Concentration of Enzyme and Substrate.—Relation between time for 40% inversion (t_{40}) and concentration of sucrose, (C_s) at pH = 5.5 (126):

C_s g/l	cm ³ invertase, y	t_{40}	$\frac{t_{40} \times y}{C_s}$
50	2	47.5	19.0
50	1	93	18.6
100	2	79	15.8
100	1	163	16.3
200	2	175	17.5
200	1	376	18.8

Temperature.—According to Kjeldahl (103) calculated by Herzog; *cf.* (123.1).

°C.....	0	18	30	40	45
k	17	60	113	179	228
A		11 100	9 300	8 800	9 600
$k_{\theta+10}/k_{\theta}$		2.01	1.69	1.58	1.62

According to Tammann (160); *v. also* Euler and Laurin (48).

°C.....	0	21	30.1	39.8	50
k	18	120	163	216	302
A		14 500	6 000	5 500	6 600
$k_{\theta+10}/k_{\theta}$		2.47	1.40	1.34	1.39

pH.—Optimum: 3.5–5.5 at 52° (158) and at 22° (117).

Activation.—Neutral salts (28, 57); salts of heavy metals (52); various organic substances (53); *v. also* (14, 17, 24, 29, 30, 31, 32, 33, 47, 50, 84, 92, 120, 124, 125, 126, 131).

INVERTASE, BANANA

Time.—No satisfactory data (62).

pH.....	3.0	3.5	4.0	4.5	5.0	5.5	6.0	6.5
Action.....	183	481	489	478	458	375	135	52

For effect of aging, *v.* (111); *v. also* (63).

Hydrolysis of Maltose

MALTASE, YEAST

Time.—No concordant results, *v.* (9, 87, 107, 173). According to Willstätter the reaction is monomolecular (173).

<i>t</i> (min) . . .	10	20	30	40	60	80	100	150	200	300
% split . . .	19.2	26.9	33.8	37.7	44.0	49.0	53.2	61.2	66.4	75.0

Enzyme Concentration.—(173).

<i>E</i>	2	5	10
<i>t</i> (min)	150	60	30
% split	34.2	34.4	34.5

Temperature.—According to Lintner and Kröber (108), calculated by Herzog; cf. (130).

°C	10	20	30	40
Velocity	1	1.9	2.74	3.58
<i>A</i>	10 600	6 500	5 100	
<i>k</i> ₀₊₁₀ / <i>k</i> ₀	1.90	1.44	1.28	

pH.—Optimum at 6.1–6.8, with “untergährige Bierhefe,” brewers’ bottom yeast (122).

Activation.—Neutral salts, no effect except Ca which decreases action.

MALTASE, TAKA DIASTASE

pH.—Optimum at *ca.* 4 (97); at 4.1 (8); *v. also* (34).

Hydrolysis of Lactose

LACTASE, ALMOND

Time.—With 0.7% solution, 0.5 g emulsin, pH at 4.4, 30°C, monomolecular *k* (171); *v. also* (9, 10).

<i>t</i> (hr)	4	7	21	24	30	46
% split	15	24	55	61	69.5	85
10% <i>k</i>	410	390	380	390	396	410

pH.—(171).

pH	3.2	3.8	4.4	4.9	6.0	7.0	8.0
% split	30	39	44	41	30	8.5	2.5
10% <i>k</i>	9.7	13.4	15.7	14.3	9.7	2.3	0.7

Hydrolysis of α-Glucosides

α-GLUCOSIDASE, YEAST

Time.—2.7% solution of glucoside at 30°C (174).

<i>t</i> (min)	10	20	40	60	100	160	240	340
% split	7.6	12.3	20.4	26.7	35.9	45.9	53.1	60.2

Enzyme Concentration.

<i>E</i> (cm ³ in 50 cm ³)	1	2	5	10
<i>t</i> (min)	800	400	160	80
% split	32	32	31.4	31.4

E × *t* = *ca.* constant (174).

pH.—Hydrolysis of maltose and of α-methylglucoside at pH = 6.0 to 7.8. T. V. = time value of yeast extract (174):

pH	Maltose		Glucoside	
	% split	T. V.	% split	T. V.
6.0	43.0	86	32.7	142
6.4	42.8	87	33.3	137
6.8	42.7	87	32.7	142
6.8	42.7	87	28.2	280
7.2	41.4	93	24.5	340
7.8	40.3	99	24.5	340

Reversibility.—Influence of alcohol concentration (*C*_A) on yield, % bound; 1% solution of glucose; aqueous extract of yeast at 16°C (20):

<i>C</i> _A	days	%	<i>C</i> _A	days	%	<i>C</i> _A	days	%	<i>C</i> _A	days	%

MILK COAGULATION BY RENNET

Time and Concentration of Rennet.—Time of curdling \times concentration of rennet = constant ($\pm ca.$ 30%), with calf rennet, not with that of swine or man (112).

Temperature.—(66).

°C.....	25	30	35	40
v	1	1.69	3.15	5.40
A.....	18 600	22 300	20 800	
$k_{\theta+10}/k_{\theta}$	2.86	3.32	2.94	

pH.—Optimum at 5 (36). In the presence of Ca salt, optimum at 6–6.4 (119).

Calcium Salts.—For effect, *v.* (146); *v. also* (65, 66, 77, 89, 95, 106, 139, 159).

HYDROLYSIS OF UREA

UREASE, SOY-BEAN

Time.—According to (15), $m \times t = \frac{nc}{0.434} \log_{10} \frac{1}{1-y} + ay$.

x = concentration urea (g in 100 cm³)

c = concentration H-ions (g in 100 cm³)

n = coefficient of absorption (1 g H-ions absorbs n times the radiation absorbed by 1 g urea)

$$y = \frac{a-x}{a}$$

$$m = \text{velocity constant} = \frac{0.0327 \log_{10} \frac{1}{1-y} + 0.01y}{t}$$

t (min).....	20	30	50	70	90	110

DECOMPOSITION OF PEROXIDES

CATALASE, YEAST

Time.—Values of 434.3k (94).

25°C, $\frac{1}{90}$ mole H₂O₂

t (min).....	0	5	10	15	20	25	30
cm ³ KMnO ₄ ...	41.8	31.5	23.7	17.9	13.5	10.2	7.6
434.4k.....		24.57	24.67	24.55	24.54	24.50	24.69

0°C, $\frac{1}{33}$ mole H₂O₂

t (min).....	0	5	10	20	30	40	60
cm ³ KMnO ₄ ...	48.4	38.1	30.1	18.7	11.6	7.2	2.8
434.4k.....		20.78	20.62	20.65	20.67	20.68	20.62

Enzyme Concentration.— $k = 0.183E^{0.366} \pm \text{ca. } 1\%$.

Living Yeast.—Splitting of H₂O₂ by living yeast, pH = 6.8; 0°C, according to Euler (45).

A = 0.1 g of yeast in 100 cm³ 0.4% Na phosphate; of this are taken 50 cm³ + 50 cm³ 0.02 N H₂O₂

B = 0.2 g of yeast in 100 cm³ 0.4% Na phosphate; of this are taken 50 cm³ + 50 cm³ 0.02 N H₂O₂

C = 0.3 g of yeast in 100 cm³ 0.4% Na phosphate; of this are taken 50 cm³ + 50 cm³ 0.02 N H₂O₂

Living Yeast.—(Continued)

Min	A		B		C	
	cm ³	10 ⁴ k	cm ³	10 ⁴ k	cm ³	10 ⁴ k
0	5.2		5.2		5.2	
15	5.0	11	4.8	23	4.5	42
30	4.8	11	4.4	24	3.7	49
45	4.7	10	4.1	23	3.2	47
60	4.5	10	3.8	21	2.8	45

Activation.—The activating action of toluene, chloroform, phenol and thymol on the H₂O₂-splitting capacity of living yeast (45); v , also (135).

A: 0.2 g of yeast in 100 cm³ water, saturated with 0.5 cm³ toluene, chloroform, etc., 50 cm³ of this + 50 cm³ 0.0185 N H₂O₂, pH = 6.2.

B: The same, without toluene, chloroform, etc., pH = 6.8.

Toluene

13.33	40	0.11	0.36	0.82

Antiseptics (78).

Substance	Effect on total fermentation
Concentrated solution of glycerol...	Slight diminution
Concentrated solution of sugar.....	Slight increase
Toluene (to saturation or excess)...	Less than 10% diminution
Chloroform, 0.5%.....	Slight increase
Chloroform, 0.8% (saturation).....	No change
Chloroform large excess, 17%.....	64% diminution
Chloral hydrate, 0.7%.....	Increase up to 27%
Chloral hydrate, 3.5–5.4%.....	Completely destroyed
Phenol, 0.1%.....	No change
Phenol, 0.5%.....	40% diminution
Phenol, 1.2%.....	Completely destroyed
Thymol, 1%.....	Slight diminution
Thymol, 5%.....	Marked diminution
Benzoic acid, 0.1%.....	7% diminution
Benzoic acid, 0.25%.....	26% diminution
Salicylic acid, 0.1%.....	10% diminution
Salicylic acid, 0.27%.....	35% diminution
Formaldehyde, 0.12%.....	20% diminution
Formaldehyde, 0.24%.....	30–60% diminution
Acetone, 6%.....	20% diminution
Acetone, 14%.....	80% diminution
Alcohol, 6%.....	0–2% diminution
Alcohol, 14%.....	75% diminution
Sodium fluoride, 0.5%.....	99% diminution
Sodium fluoride, 2.0%.....	Almost completely destroyed

Antiseptics.—(Continued)

Substance	Effect on total fermentation
Ammonium fluoride, 0.55%.....	Completely destroyed
Sodium azoimide, NaN ₃ , 0.36%...	Slight diminution
Sodium azoimide, NaN ₃ , 0.71%...	Marked diminution
Quinine hydrochloride, 1%.....	Slight increase
Ozone 10.4–34.8 milligram per 20 cm ³	Marked diminution
Hydrocyanic acid, 1.2%.....	Completely destroyed

Phosphates.—(79).

Sugar, g	Total vol., cm ³	Optimum vol. of 0.6 molar phosphate, cm ³		Maximum rate, cm ³ of CO ₂ /5 min	
		Glucose	Fructose	Glucose	Fructose
2	35	2	5	7.5	32.2

ABBREVIATIONS AND CONVENTIONS

A Fraction of incident energy absorbed.	A Fraction absorbée de l'énergie incidente.	A Der absorbierte Bruchteil der einfallenden Energie.	A Frazione di energia incidente assorbita.
F Light filter (wave filter).	F Filtre de lumière (filtre d'onde).	F Lichtfilter (Strahlenfilter).	F Filtro di luce.
Fs Spark gap.	Fs Distance explosive.	Fs Funkenstrecke.	Fs Distanza esplosiva.
K ₀ Equilibrium constant.	K ₀ Constante d'équilibre.	K ₀ Gleichgewichtskonstant.	K ₀ Costante di equilibrio.
$K_0 = [M]^m[N]^n/[A]^a[B]^b$ for $aA + bB \rightleftharpoons mM + nN$.	$K_0 = [M]^m[N]^n/[A]^a[B]^b$ pour $aA + bB \rightleftharpoons mM + nN$.	$K_0 = [M]^m[N]^n/[A]^a[B]^b$ für $aA + bB \rightleftharpoons mM + nN$.	$K_0 = [M]^m[N]^n/[A]^a[B]^b$ per $aA + bB \rightleftharpoons mM + nN$.

k_x Velocity constant for reaction of the order x .	k_x Constante de vitesse pour une réaction du $x^{\text{ième}}$ ordre.	k_x Reaktionsgeschwindigkeitskonstante x -ter Ordnung.	k_x Costante di velocità per reazioni di ordine x .
$k_{x(s)}$ Velocity constant for x -order reaction in presence of catalyzer or added substance.	$k_{x(s)}$ Constante de vitesse pour une réaction du $x^{\text{ième}}$ ordre en présence d'un catalyseur ou d'une substance additionnelle.	$k_{x(s)}$ Geschwindigkeitskonstante x -ter Ordnung mit Zusatz.	$k_{x(s)}$ Costante di velocità per reazioni di ordine x in presenza di catalizzatori o di sostanze aggiunte.
p Pressure.	p Pression.	p Druck.	p Pressione.
QQ Quartz mercury vapor lamp.	QQ Lampe de quartz à vapeur de mercure.	QQ Quartz-QuecksilberDampf-lampe.	QQ Lampada di quarzo a vapori di mercurio.
R_λ Range of active wave lengths.	R_λ Intervalle des longueurs d'ondes actives.	R_λ Wirksame Wellenlänge.	R_λ Lunghezze d'onda attive.
Sp Spectral purification of the monochromatic radiation.	Sp Purification spectrale d'une radiation monochromatique.	Sp Spektrale Reinigung der monochromatischen Strahlung (Monochromator).	Sp Separazione spettrale di radiazioni monocromatiche.
[X] Concentration of the substance X in g-mole/liter.	[X] Concentration de la substance X en mol. gr. par litre.	[X] Die Konzentration der Substanz X in g-mol/liter.	[X] Concentrazione della sostanza X in grammi molecole per litro.
Z Catalyzer or added substance.	Z Catalyseur ou substance additionnelle.	Z Ein Katalysator oder Zusatz.	Z Catalizzatore o sostanze aggiunte.
λ Wave length in $\mu\mu$.	λ Longueur d'onde en $\mu\mu$.	λ Die Wellenlänge in $\mu\mu$.	λ Lunghezza d'onda in $\mu\mu$.
α Extinction coefficient.	α Coefficient d'extinction.	α Extinktionskoeffizient.	α Coefficiente di estinzione.
$\alpha = \frac{1}{[X]l} \log_{10} \left(\frac{J_o}{J} \right)$ where	$\alpha = \frac{1}{[X]l} \log_{10} \left(\frac{J_o}{J} \right)$ où	$\alpha = \frac{1}{[X]l} \log_{10} \left(\frac{J_o}{J} \right)$ wo	$\alpha = \frac{1}{[X]l} \log_{10} \left(\frac{J_o}{J} \right)$ dove
l = Length of path in cm.	l = Épaisseur de la couche absorbante en cm.	l = Schichtdicke in cm.	l = Lunghezza del percorso in cm.
J_o (resp. J) = Intensity of the incident (resp. emergent) radiation.	J_o (resp. J) = Intensité de la radiation incidente (resp. émergente).	J_o (bezw. J) = Intensität der einfallenden (bezw. austretenden) Strahlung.	J_o (resp. J) = Intensità delle radiazioni incidenti o emergenti.
Bold face numbers following $a \pm$ deviation indicate the number of experiments included in the average.	Les chiffres en caractères gras suivant une déviation \pm indiquent le nombre des valeurs expérimentales dont on a pris la moyenne.	Schwarze Ziffern nach eine \pm Abweichung bedeuten die Anzahl Werte, aus welchen der Mittelwert berechnet wurde.	I numeri scritti in nero dopo uno scarto \pm indicano il numero delle esperienze dalle quali è stato calcolato il valore medio.

TEMPERATURE COEFFICIENTS

Except in the case of the reaction, $\text{NH}_3 \rightarrow \text{N} + 3\text{H}$, all known temperature coefficients refer only to the incident (not the absorbed) light. Possible changes in absorption with temperature are therefore not taken into account.

A = arc lamp; B = blue; D = in dark; Da = daylight; DB = dark blue; G = green; Gl = incandescent lamp; Mf = metal filament; Or = orange; R = red; S = sunlight; T = tungsten arc lamp; UV = ultraviolet; V = violet; W = white.

PHOTOTROPY

A comprehensive review with a list of substances studied is given in (34).

The following classes of compounds show phototropy (in absence of light designated by (D); on exposure to light by (L)):

Fulgides (32, 33, 36)

Diaryl derivatives: yellow to orange (D); orange to dark brown (L).

Triaryl derivatives: orange to red (D); dark brown (L).

Fulgenic acids, their salts and esters (36):

White to pale yellow (D); yellowish green, yellow or orange (L).

Hydrazones (7, 8, 13, 15, 16, 17, 18, 21, 24, 36)

White to yellowish white (D); rose to purple-red (L).

Osozones (1, 14, 19, 20)

Stilbene derivatives (35).

For other organic compounds showing phototropy, see (3, 5, 9, 10, 11, 22, 25, 26, 27, 28, 29, 30, 34, 37, 38).

INORGANIC COMPOUNDS

	(D)	(L)	Lit.
Lithopone.....	white	gray	(2, 23)
CaS, SrS.....	white	rose to violet	(12)
Li ₂ NH.....	white	red	(4)
SnI ₂	red	yellow	(6)

SOLUTIONS IN CHCl₃ (31)

	(D)	(L)
α -Naphthylaminocamphor.....	colorless	green
<i>m</i> -Phenylenebisaminocamphor.....	colorless	green
<i>ar</i> -Tetrahydro- α -naphthylaminocamphor.....	pale red	green

THE ABSORPTION SPECTRA OF DYES

WALTER C. HOLMES

ARRANGEMENT, SYMBOLS, UNITS AND CONVENTIONS

The following tables are designed to supplement the tables of spectroscopic data on technical synthetic dyes supplied by Formánek and Grandmougin in their "Untersuchung und Nachweis organischer Farbstoffe auf spektroskopischem Wege" and the review of the spectroscopy of natural coloring matters found in Kayser's "Handbuch der Spektroskopie."

The primary aim has been that of affording a ready means of ascertaining what data are available for any given coloring matter. With this end in view the selection of dyes has been made as comprehensive and the literature references as complete as possible. There have also been recorded numerous data on the spectral location of the maxima of absorption bands, under various conditions, in the ultra-violet, visible and infra-red, which will usually prove adequate to those interested in the identification of dyes or in the correlation of color and constitution. If a more complete qualitative or quantitative definition of the absorption is desired it may, in numerous instances, be obtained readily by consulting the references recorded.

Synthetic dyes have been arranged by classes in twelve tables and listed in the order of their constitutional formulae. Natural coloring matters have been listed in alphabetical sequence in Table 13. The dye formulae are followed by the scientific names of the coloring matters, supplemented, in some instances, by names of more common usage and by C. I. (Colour Index of the Society of Dyers and Colourists) numbers.

All absorption maxima in the ultra-violet and visible spectrum are recorded in terms of wave length in millimicrons. Italicized values refer to the principal bands and bracketed values to relatively insignificant bands. (The common bracketing of several values signifies multiple maxima in a single band.) The absorption data are followed by reference numbers to the source from which they were taken, together with further reference numbers to other literature on the dye in question which may prove of further interest. References followed by (q) contain data on the more definitely quantitative aspect of the absorption.

In instances in which various data of independent origin have been available the recorded values are those which have appeared the more reliable to the writer. The question of the dependence which may be placed upon the greater portion of the material presented is left to the discrimination of the reader. Since data

Les tables suivantes ont pour objet de compléter les tables des données spectroscopiques concernant les colorants synthétiques techniques présentées par Formánek et Grandmougin dans leur ouvrage "Untersuchung und Nachweis organischer Farbstoffe auf spektroskopischem Wege" et la revue de la spectroscopie des matières colorantes naturelles, qui se trouve dans l'ouvrage de Kayser "Handbuch der Spektroskopie."

L'objectif principal a été celui de procurer un moyen rapide de s'assurer quelles données sont disponibles pour une matière colorante donnée. À cette fin la sélection des colorants a été faite aussi étendue et les références bibliographiques aussi complètes que possible. Il a aussi été mentionné un très grand nombre de données sur la position spectrale des maxima des bandes d'absorption, pour des conditions variées, dans l'ultra-violet, le visible et l'infra-rouge, qui se révéleront ordinairement suffisantes pour ceux qui s'occupent de l'identification des colorants ou de la corrélation entre la couleur et la constitution. Si une définition qualitative ou quantitative plus complète de l'absorption est désirée, celle-ci pourra être obtenue promptement dans bien des cas en consultant les références mentionnées.

Les colorants synthétiques ont été arrangés par classes en douze tables et sont inscrits en listes suivant l'ordre de leurs formules de constitution. Les matières colorantes naturelles ont été disposées dans l'ordre alphabétique dans la Table 13.

Les formules des colorants sont suivies des noms scientifiques des matières colorantes, complétés dans certains cas par les noms d'un usage plus courant, et les nombres C. I. (Colour Index of the Society of Dyers and Colourists). Tous les maxima d'absorption dans les spectres ultra-violet et visible sont exprimés en millimicrons. Les valeurs en italique concernent les bandes principales, et les valeurs entre crochets ont rapport à des bandes relativement insignifiantes. (Plusieurs valeurs comprises entre deux crochets signifient des maxima multiples dans une seule bande.) Les données d'absorption sont suivies de nombres de référence indiquant la source dont elles proviennent; d'autres nombres de référence mentionnés à la suite se rapportent à d'autres sources bibliographiques relatives aux colorants en question qui peuvent présenter par surcroît un certain intérêt. Les références suivies de (q) signifient la disponibilité de données au point de vue plus défini de l'aspect quantitatif de l'absorption.

available for a given dye are meager and difficult to locate, in general, and since any information may be of service, it has not been considered advisable to exclude any material of definite character.

Die folgenden Tafeln bilden eine Ergänzung (1) zu den Tafeln spektroskopischer Werte technischer synthetischer Farbstoffe, die von Formánek und Grandmougin in ihrem Werke "Untersuchung und Nachweis organischer Farbstoffe auf spektroskopischem Wege" beigegeben sind. Sie ergänzen (2) die Zusammenstellung über die Spektroskopie natürlicher Farbstoffe, die Kayser in seinem "Handbuch der Spektroskopie" gegeben hat.

Das Hauptziel war, ein bequemes Mittel für die Feststellung zu schaffen, welche Werte für einen bestimmten färbenden Stoff zu Gebote stehen. Unter diesem Gesichtspunkte geschah die Auswahl der Farbstoffe so umfassend wie möglich und der Nachweis der Literatur möglichst vollständig. Dort wurden zahlreiche Angaben über die spektrale Lage der Maxima von Absorptionsbanden zusammengetragen und zwar für verschiedene Bedingungen: im sichtbaren, Ultraviolett und Infrarot. In der Regel werden sie sich als ausreichend erweisen für diejenigen Forscher, denen an der Identifizierung von Farbstoffen oder an der Beziehung von Farbe und Konstitution gelegen ist. Braucht man eine vollständige qualitative oder quantitative Definition der Absorption, so ist sie in zahlreichen Fällen bequem zu erhalten, wenn man die gesammelten Literaturangaben einsieht.

Synthetische Farbstoffe sind nach Klassen in zwölf Tafeln angeordnet und in der Reihenfolge ihrer Konstitutionsformeln aufgeführt. Natürliche Farbstoffe sind in alphabetischer Folge in Tafel 13 gesammelt.

Den Formeln der Farbstoffe folgen die wissenschaftlichen Namen der färbenden Stoffe. Zur Ergänzung dienen in einigen Fällen mehr allgemein gebräuchliche Bezeichnungen und die C. I. Nummern (des "Colour Index of the Society of Dyers and Colourists"). Alle Absorptions-Maxima im Ultraviolett und in sichtbaren Spektren sind in Millimikron angegeben. Kursiv (in Schrägschrift) gesetzte Werte beziehen sich auf die Hauptbanden, eingeklammerte Werte beziehen sich auf verhältnismässig unbedeutende Banden. (Das Zusammenklammern verschiedener Werte bedeutet mehrere Maxima in einer einzelnen Bande.) Auf die Absorptionswerte folgen die Nummern-Angaben anderer Literaturstellen für die in Rede stehenden Farbstoffe, die von weiterem Interesse sein können. Angaben, die mit einem (q) versehen sind, kennzeichnen die Brauchbarkeit von Werten für die mehr quantitative Betrachtung der Absorption.

In Fällen, in denen verschiedene Werte aus von einander unabhängigen Quellen zur Verfügung standen, hat der Herausgeber die ihm zuverlässiger erscheinenden Werte aufgenommen. Die Frage der Verlässlichkeit, die für einen grossen Teil des Stoffes gestellt werden kann, ist der Entscheidung des Lesers überlassen. Im allgemeinen sind die für einen bestimmten Farbstoff verfügbaren Werte so dürftig und auch so schwierig festzustellen—während auch der geringste Nachweis schon von Nutzen sein kann—dass es nicht ratsam erschien, irgendwelche Unterlagen bestimmten Charakters fortzulassen.

Dans le cas où des données diverses d'origines différentes ont été disponibles, les valeurs mentionnées sont celles qui ont paru les plus dignes de confiance au rédacteur. La question de la confiance, qui peut être placée dans la plus grande portion de la matière présentée, est laissée à la discrimination du lecteur. Comme les données disponibles pour un colorant donné sont en général peu abondantes et difficiles à trouver et comme chaque information peut être utile, il a été considéré comme judicieux de n'exclure aucune matière présentant un caractère défini.

Le seguenti tabelle sono compilate come complemento delle tabelle di dati spettroscopici sulle sostanze coloranti sintetiche di uso industriale dati da Formánek e Grandmougin nella loro "Untersuchung und Nachweis organischer Farbstoffe auf spektroskopischem Wege" e sulle sostanze coloranti naturali contenute nel "Handbuch der Spektroskopie" di Kayser.

Il principale nostro scopo è stato quello di fornire un modo rapido per stabilire quali sono i dati dei quali si dispone per qualsiasi sostanza colorante. Tenendo presente questo fine si è tenuto conto del maggior numero possibile di sostanze coloranti, e si è riportato nel modo più completo la bibliografia. Abbiamo pure riportato un considerevole numero di dati sopra la posizione dei massimi nelle bande di assorbimento in diverse condizioni, nell'ultra-violetto, nel visibile e nell'infra-rosso, i quali dati potranno bastare per chi si interessa della identificazione dei coloranti o dei rapporti tra colore e costituzione. Se si vuole un quadro più completo, dal punto di vista qualitativo o quantitativo, dell'assorbimento, lo si può ottenere subito in molti casi consultando le citazioni riportate.

I coloranti sintetici sono stati disposti per classi in dodici tavole e ordinati in base alle loro formule di costituzione. Le sostanze coloranti naturali sono state messe in ordine alfabetico nella Tavola 13.

Le formule dei coloranti sono seguite dai nomi scientifici della sostanza colorante completati in alcuni casi con i nomi di uso più comune e con i numeri del C. I. (Colour Index of the Society of Dyers and Colourists). Tutti i massimi di assorbimento nell'ultra-violetto e nello spettro visibile sono riportati in millimicron. I valori in italici si riferiscono alle principali bande e i valori fra parentesi alle bande relativamente insignificanti. (Le parentesi comuni che racchiudono vari valori significano massimi multipli in una stessa banda.) I dati degli assorbimenti sono seguiti da numeri che si riferiscono alla memoria dalle quali sono stati presi insieme con altri numeri di riferimento ad altra letteratura sul colorante in questione, che può essere di ulteriore interesse. Quando una citazione è seguita da (q) significa che si hanno a disposizione dati quantitativi sull'assorbimento.

Nei casi nei quali si sono potuti avere dati di origine indipendente, i valori riportati sono quelli che sono sembrati i più attendibili al compilatore. La questione della fiducia che si può avere nella maggior parte dei dati riprodotti è lasciata al criterio del lettore. Siccome i valori ottenibili per un dato colorante sono in genere rari e difficili a rintracciare e siccome qualsiasi informazione può essere utile, non abbiamo creduto opportuno di escludere nessun dato di carattere definito.

$C_{13}H_9N_3O_6S$.—*p*-Nitrobenzeneazosulfocarbolate: alkali salt, 575 in Me_2CO ; 514 in EtOH (643); data given in (501) are incorrect.

$C_{12}H_{10}N_2$.—Azobenzene: 463, 312 in H_2O (suspension) (471); 444, (345), 317 in EtOH; 417, 280 in concd. HCl (59); 440 in H_2SO_4 ; 589 in fuming acid (diacid salt) (310). In EtOH, 455, 313 (84); (third band at 229) (393). Similar abs. in $CHCl_3$ (210) and in vapor form (532); *cf.* (26, 29, 111, 185q, 201q, 214, 220q, 231q, 385, 413, 516, 534q, 618).

$C_{12}H_{10}N_2O$.—Azoxybenzene: 323 in EtOH and in vapor form (532). Metallic salts (225); *cf.* (533).

o-Hydroxyazobenzene: 441, 390 in alk. H_2O ; 480 in acid H_2O (468).

m-Hydroxyazobenzene: 415, 380 in alk. H_2O (468).

p-Hydroxyazobenzene (benzeneazophenol): 340, 315 in H_2O ; 433, 395 with alkali; 490, 463 with acid (468); 429, 268 in alk. H_2O (62); 331 in HCl (618); 465, 248 in H_2SO_4 (210); 360 in EtOH (456), 320 with NaOEt; 348 in Et_2O (211); (470), 355, 235 in EtOH (62). Abs. in 30 organic solvents (12q). Abs. of various derivs. (185q, 220q); *cf.* (26, 111, 225, 469, 471, 475, 544, 595, 596q, 613q, 624).

$C_{12}H_{10}N_2O_2$.—2, 2'-Dihydroxyazobenzene: 490 in alk. H_2O (471).

2, 4-Dihydroxyazobenzene (benzeneazoresorcinol): 483 in alk. H_2O (471); 488, 450 in H_2SO_4 (196); 408 in EtOH (352); *cf.* (624).

3, 3'-Dihydroxyazobenzene: 500, 475 in alk. H_2O (471).

3, 4-Dihydroxyazobenzene (benzeneazocatechol): 480, 430 in alk. H_2O (468); *cf.* (622).

2, 5-Dihydroxyazobenzene (benzeneazoquinol): abs. of neutral and alk. solns. in visible and ultra-violet (622).

2, 4'-Dihydroxyazobenzene: 490 in alk. H_2O (471).

3, 4'-Dihydroxyazobenzene: 480 in alk. H_2O (471).

4, 4'-Dihydroxyazobenzene: 473 in alk. H_2O , 360 in EtOH (463 with NaOEt) (619).

$C_{12}H_{10}N_2O_3$.—2, 3, 4-Trihydroxyazobenzene: abs. in visible and ultra-violet in neutral and alk. solns. (623).

2, 4, 2'-Trihydroxyazobenzene: 540, 492 in alk. H_2O (471).

2, 4, 4'-Trihydroxyazobenzene: 528, 490 in alk. H_2O (471).

2, 4, 5-Trihydroxyazobenzene: 505, 440, 345 in alk. H_2O (471).

2, 4, 6-Trihydroxyazobenzene: 460, 410 in alk. H_2O (471); 490, 405 in H_2SO_4 (196); *cf.* (623).

3, 4, 4'-Trihydroxyazobenzene: 470, 535 in H_2O with Na_2CO_3 ; 470, 440 with $NaHCO_3$ (471).

3, 4, 5-Trihydroxyazobenzene: 515, 495, 420 in alk. H_2O (471).

$C_{12}H_{10}N_2O_3S$.—Azobenzene-*p*-sulfonic acid: 432 in H_2O over pH range 1–12 (613q).

$C_{12}H_{10}N_2O_4$.—2, 2', 4, 4'-Tetrahydroxyazobenzene: 575, 540, 462 in H_2O with $NaHCO_3$ (471).

2, 4, 3', 4'-Tetrahydroxyazobenzene: 585 in alk. H_2O (471).

3, 3', 4, 4'-Tetrahydroxyazobenzene: 680 in alk. H_2O (471).

$C_{12}H_{10}N_2O_4S$.—*m*-Sulfobenzeneazophenol: 460, 410 in alk. H_2O (471).

p-Sulfobenzeneazophenol: 440, 400 in alk. H_2O (471); *cf.* (595, 613).

Benzeneazosulfocarbolate: 455 in alk. H_2O (468).

$C_{12}H_{10}N_2O_6S$.—*p*-Sulfobenzeneazocatechol: 520 with NaOH; 485 with Na_2CO_3 (471).

p-Sulfobenzeneazoresorcinol (C. I. 148): Na salt, 430 in H_2O (271); cf. (231q, 420q, 525q).

$C_{12}H_{10}N_2O_6S$.—*p*-Sulfobenzeneazophloroglucinol: 490 in H_2SO_4 (196).

$C_{12}H_{10}N_4O_2$.—3'-Nitro-4-aminoazobenzene: 518, 490 in acid H_2O (471).

$C_{12}H_{11}N_3$.—*m*-Aminoazobenzene: 430 in H_2O (pH 1) (613); (495 in acid H_2O (471)).

p-Aminoazobenzene: 490 in acid H_2O (pH 1) (613); 420 in H_2SO_4 (diacid salt); 556 in fuming acid (triacid salt); 395, 250 in EtOH (300 with HCl) (310). Abs. of vapor (532); cf. (26, 260, 385, 463, 468, 469, 619).

Diazoaminobenzene: 361, 235 in EtOH; abs. of vapor (532).

$C_{12}H_{11}N_3O$.—Aminoazoxybenzene: 527 in acid H_2O (468).

3-Hydroxy-4'-aminoazobenzene: 490, 470 in acid H_2O ; 485, 430 in alk. H_2O (471).

p-Aminobenzeneazophenol: 385 in EtOH; 546, 354 in dil. HCl; 467 in conc. HCl (diacid salt) (261).

$C_{12}H_{11}N_3O_2$.—2-Amino-3', 4-dihydroxyazobenzene: 478 in alk. H_2O ; 490, 460 in acid H_2O (471).

5-Amino-2, 4'-dihydroxyazobenzene: 460 in alk. soln. (473).

$C_{12}H_{11}N_3O_3S$.—4-Sulfo-4'-aminoazobenzene (Aniline Orange): 485 in acid H_2O (pH 1) (613q); 448, (280) in dil. NaOH; 496 in dil. HCl (216).

$C_{12}H_{12}N_2$.—Hydrazobenzene: 290, 245 in EtOH (413); 310 in $CHCl_3$ (534).

$C_{12}H_{12}N_4$.—*p*-Diaminoazobenzene: 499 in acid H_2O (463); 603 in very dil. HOAc (monacid salt); 497, 310 in EtOH + 3% HCl (diacid salt); 410 in H_2SO_4 (triacid salt) (261).

Benzeneazo-*m*-phenylenediamine (hydrochloride, C. I. 20): Infra-red abs. (296). Acid salts (497); cf. (231q).

$C_{13}H_9N_3O_4$.—*p*-Nitrobenzeneazosalicylaldehyde: alkali salt, 564 in Me_2CO ; 500 in EtOH; 478 in H_2O (643).

p-Nitrobenzeneazo-*p*-hydroxybenzaldehyde: alkali salt, 547 in Me_2CO ; 494 in EtOH; 470 in H_2O (643).

$C_{13}H_9N_3O_5$.—*p*-Nitrobenzeneazosalicylic acid (C. I. 40): 609 in alk. Me_2CO ; 555 in alk. EtOH; 514 in alk. H_2O (643); cf. (501, 525q, 595).

p-Nitrobenzeneazo-*m*-hydroxybenzoic acid: alkali salt, 583 in Me_2CO ; 508 in EtOH; 474 in H_2O (643).

p-Nitrobenzeneazo-*p*-hydroxybenzoic acid: alkali salt, 566 in Me_2CO ; 505 in EtOH; 475 in H_2O (643).

$C_{13}H_{10}ClN_3O_2$.—*p*-Nitrobenzeneazo-2-chloro-5-hydroxytoluene: alkali salt, 580 in Me_2CO ; 524 in EtOH; 505 in H_2O (643).

$C_{13}H_{10}N_2O$.—Benzoylazobenzene: 294 in EtOH (?) (434).

$C_{13}H_{10}N_2O_3$.—4-Hydroxy-2-carboxyazobenzene: 445, 395 in alk. H_2O (471).

4-Hydroxy-2'-carboxyazobenzene: 435, 385 in alk. H_2O (471).

$C_{13}H_{10}N_2O_3$.—4-Hydroxy-3-carboxyazobenzene: 452, 402 in alk. H_2O (471).

4-Hydroxy-3'-carboxyazobenzene: 438, 388 in alk. H_2O (471).

4-Hydroxy-4'-carboxyazobenzene: 452, 402 in alk. H_2O (471).

$C_{13}H_{10}N_2O_4$.—2, 4'-Dihydroxy-5-carboxyazobenzene: 475 in alk. soln. (473).

$C_{13}H_{10}N_4O_4$.—*p*-Nitrobenzeneazosalicylamide: alkali salt, 525 in Me_2CO ; 480 in EtOH (643).

$C_{13}H_{11}N_3O_3$.—*o*-Nitrobenzeneazo-*o*-cresol: 380, 238 in EtOH; 457, 273 in alk. H_2O (62).

o-Nitrobenzeneazo-*m*-cresol: 375, 240 in EtOH; 445, 278 in alk. H_2O (62).

o-Nitrobenzeneazo-*p*-cresol: abs. in visible and ultra-violet in neutral and alk. solns. (621).

m-Nitrobenzeneazo-*m*-cresol: 375, 257 in EtOH; 436, 273 in alk. H_2O (62).

m-Nitrobenzeneazo-*o*-cresol: 370, 255 in EtOH; 465, 276 in alk. H_2O (62).

m-Nitrobenzeneazo-*p*-cresol: abs. in visible and ultra-violet in neutral and alk. solns. (621).

p-Nitrobenzeneazo-*o*-cresol: 391, 273 in EtOH; 493, 287 in alk. H_2O (62); alkali salt, 590 in Me_2CO ; 530 in EtOH; 490 in H_2O (643); cf. (621).

p-Nitrobenzeneazo-*m*-cresol: 398, 266 in EtOH; 486, 286 in alk. H_2O (62); 585 in alk. Me_2CO ; 520 in alk. EtOH (643); cf. (501, 621).

p-Nitrobenzeneazo-*p*-cresol: alkali salt, 590 in Me_2CO ; 542 in EtOH; 499 in H_2O (643); cf. (94, 501).

$C_{13}H_{11}N_3O_4$.—*p*-Nitrobenzeneazoguaiacol: alkali salt, 600 in Me_2CO ; 540 in EtOH; 510 in H_2O (643); cf. (501, 622).

p-Nitrobenzeneazosaligenin: alkali salt, 565 in Me_2CO ; 509 in EtOH; 483 in H_2O (643); cf. (501).

p-Nitrobenzeneazo-*o*-cresol: 539 in alk. Me_2CO (643).

p-Nitrobenzeneazoresorcinol methyl ether; alkali salt, 574 in Me_2CO ; 520 in EtOH; 493 in H_2O (643).

p-Nitrobenzeneazohydroquinol methyl ether: abs. in visible and ultra-violet in neutral and alk. solns. (622).

$C_{13}H_{11}N_3O_7S$.—*p*-Nitrobenzeneazothiocol: alkali salt, 555 in Me_2CO ; 536 in EtOH; 510 in H_2O (643); cf. (501).

$C_{13}H_{12}N_2O$.—Benzeneazo-*o*-cresol: (470), 358, 238 in EtOH; 450, 273 in alk. H_2O (62); cf. (621).

Benzeneazo-*m*-cresol: 352 in EtOH (431 with NaOEt); 481, 328 in HCl (618); (450), 358, 238 in EtOH; 412, 270 in alk. H_2O (62); cf. (621).

Benzeneazo-*p*-cresol: 316 in EtOH (488, 330 with NaOEt); 492, 406 in HCl (618); cf. (624).

Tolueneazophenol: abs. of isomers in visible and ultra-violet in neutral and alk. solns. (621); abs. of derivs. (220q).

$C_{13}H_{12}N_2O_2$.—Benzeneazoguaiacol: 460 in alk. H_2O (468).

o-Tolueneazoresorcinol: 435 in EtOH (352); cf. (621).

m-Tolueneazoresorcinol: abs. in visible and ultra-violet in neutral and alk. solns. (621).

p-Tolueneazoresorcinol: 427 in EtOH (352); cf. (621).

p-Methoxybenzeneazophenol: 360 in EtOH (619).

p-Azoxyanisole: 355 in EtOH (533).

$C_{13}H_{12}N_2O_4S$.—*p*-Sulfobenzeneazo-*o*-cresol: 463 in alk. H_2O (468).

p-Sulfobenzeneazo-*m*-cresol: 475 in alk. H_2O (468).

$C_{13}H_{12}N_2S$.—Benzeneazothiobanisole: 365 in EtOH (160).

$C_{13}H_{12}N_4O_3$.—*p*-Nitrobenzeneazo-*o*-methylanilphenol: alkali salt, 635 in Me_2CO ; 573 in EtOH; 550 in H_2O (643).

$C_{13}H_{13}N_3$.—Benzeneazo-*o*-toluidine: 505, 308 in 2*N* HCl; 392 in EtOH (216).

$C_{13}H_{13}N_3O_3S$.—*p*-Sulfobenzeneazo-*o*-toluidine (*o*-Toluidine Orange): 491 in dil. HCl (613q); 414, (280) in dil. NaOH; 488, (319) in dil. HCl (216).

m-Sulfobenzeneazo-*m*-toluidine (*m*-Toluidine Orange): 483 in dil. acid (613q); 414, (280) in dil. NaOH; 501, (320) in dil. HCl (216).

4-Sulfo-4'-methylanilinoazobenzene (Monomethyl Orange): 500 in acid soln. (pH 1); 454 in alk. soln. (pH 12) (613q); 453, (280) in dil. NaOH; 506 in dil. HCl (216).

$C_{13}H_{11}N_3O_5$.—*p*-Nitrobenzeneazovanillin: alkali salt, 572 in Me_2CO ; 525 in EtOH; 509 in H_2O (643).

$C_{14}H_{11}N_3O_4$.—*p*-Nitrobenzeneazohomosalicylaldehyde: alkali salt, 595 in Me_2CO ; 546 in EtOH; 525 in H_2O (643).

$C_{14}H_{11}N_3O_5$.—*p*-Nitrobenzeneazomethylsalicylate: alkali salt, 530 in Me_2CO ; 485 in EtOH; 467 in H_2O (643).

p-Nitrobenzeneazo-*o*-cresotic acid: alkali salt, 535 in Me_2CO ; 530 in EtOH; 512 in H_2O (643).

C₁₄H₁₁N₃O₅.—*p*-Nitrobenzeneazo-*m*-cresotic acid: alkali salt, 544 in Me₂CO; 525 in EtOH; 508 in H₂O (643).
p-Nitrobenzeneazo-*p*-cresotic acid: alkali salt, 579 in Me₂CO; 535 in EtOH; 515 in H₂O (643).
C₁₄H₁₂N₂O₂.—*p*-Acetylbenzeneazophenol: 370 in EtOH; 476 in NaOH soln. (258).
C₁₄H₁₃N₃O.—*p*-Acetylaminobenzene: 345 in EtOH (619); cf. (385).
C₁₄H₁₃N₃O₂.—*m*-Acetylmino-*o*-hydroxyazobenzene (385).
C₁₄H₁₃N₃O₄.—*p*-Nitrobenzeneazocresol: alkali salt, 602 in Me₂CO; 545 in EtOH; 512 in H₂O (643).
C₁₄H₁₄N₂O.—Benzeneazophenetole: 340 in EtOH; 474, 331 in HCl (618).
o-Tolueneazocresol: abs. of cresol isomers in visible and ultra-violet in neutral and alk. solns. (620).
m-Tolueneazocresol: abs. of cresol isomers in visible and ultra-violet in neutral and alk. solns. (620).
p-Tolueneazocresol: abs. of cresol isomers in visible and ultra-violet in neutral and alk. solns. (620). *p*-Cresol isomer: 327 in EtOH (481, 334 with NaOEt); 505, 427 in HCl (618).
C₁₄H₁₄N₂O₂.—*o*, *o'*-Azoanisole: 490 in HOAc-HCl soln. (544).
p, *p'*-Azoanisole: 500 in HOAc-HCl soln. (544).
p-Ethoxybenzeneazophenol: 447, 390 in alk. H₂O (468).
C₁₄H₁₄N₂O₄S.—2, 6-Dimethyl-4-hydroxy-4'-sulfoazobenzene: influence of pH (613q).
C₁₄H₁₄N₂S₂O.—*o*, *o'*-Azophenylmethylsulfide: 620 in HOAc-HCl soln. (544).
p, *p'*-Azophenylmethylsulfide: 577 in HOAc-HCl soln. (544).
C₁₄H₁₄N₃O₃.—*p*-Nitrobenzeneazo-2-hydroxy-1, 3-dimethylbenzene: alkali salt, 610 in Me₂CO; 558 in EtOH; 517 in H₂O (643).
p-Nitrobenzeneazo-2-hydroxy-1, 4-dimethylbenzene: alkali salt, 599 in Me₂CO; 544 in EtOH; 510 in H₂O (643).
p-Nitrobenzeneazo-4-hydroxy-1, 2-dimethylbenzene: alkali salt, 600 in Me₂CO; 540 in EtOH; 510 in H₂O (643).
p-Nitrobenzeneazo-4-hydroxy-1, 3-dimethylbenzene: alkali salt, 605 in Me₂CO; 553 in EtOH; 513 in H₂O (643).
C₁₄H₁₄N₄O₂.—*m*-Nitrobenzeneazodimethylaniline: 467 in EtOH (31).
p-Nitrobenzeneazodimethylaniline: 483, 277 in EtOH (31).
C₁₄H₁₄N₄O₃.—*p*-Nitrobenzeneazo-*m*-dimethylaminophenol: alkali salt, 596 in Me₂CO; 564 in EtOH; 530 in H₂O (643).
C₁₄H₁₅N₃.—*p*-Dimethylaminobenzene (C. I. 19): 508 in acid soln. (pH 1); 450 in alk. soln. (pH 13) (613q); 545, 507 in 3% HCl; 420 in H₂SO₄ (diacid salt); 607 in fuming acid (triacid salt); 410 in EtOH; 550, 511, 300 in EtOH + 3% HCl (310); 405, 375 in H₂O; 490, 460 with alkali; 543, 508 with acid (469); cf. (26, 111, 210, 214, 218, 423q, 468, 475, 619).
C₁₄H₁₅N₃O.—*p*-Dimethylaminobenzeneazophenol: 413 in EtOH; 550, 341 in dil. HCl; 477, 314 in HCl (diacid salt) (261).
p-Dimethylaminobenzeneazoxybenzene: 545 in acid H₂O (471).
2-Dimethylamino-4-hydroxyazobenzene: 486, 463 in alk. H₂O (471).
4-Dimethylamino-2-hydroxyazobenzene: 492, 463 in alk. H₂O; 503, 473 in acid H₂O (471).
C₁₄H₁₅N₃O₃S.—*p*-Sulfobenzeneazodimethylaniline (Na salt, C. I. 142, Methyl Orange): 506 in acid soln. (pH 1), 472 in alk. soln. (pH 13) (613q); 442 in EtOH; 481, 281 in H₂O; 465, 280 in *N* NaOH; 508, (333), 283 in dil. HCl (469); cf. (208, 231, 269, 473, 525, 583q, 612, 647).
m-Sulfobenzeneazodimethylaniline: 535, 490 in acid H₂O (471).
o-Sulfobenzeneazodimethylaniline: 510 in acid soln. (pH 1); 435 in alk. soln. (pH 13); 516 in 6*N* HCl (613q).
p-Sulfobenzeneazoethylamine: 498 in acid soln. (pH 1); 442 in alk. soln. (pH 12) (613q); 493 in dil. HCl; 453, (280) in dil. NaOH (216).

2, 5-Dimethyl-4-amino-4'-sulfoazobenzene: 490 in acid H₂O (613q).
3, 5-Dimethyl-4-amino-4'-sulfoazobenzene: 500 in acid H₂O (613q).
C₁₄H₁₆N₂O₂.—Benzeneazodimethyldihydroresorcinol: 394, 246 in EtOH (472, 349, 283 with NaOEt) (380).
C₁₄H₁₆N₄.—Anilineazodimethylaniline: 513, 306, 256 in EtOH with 0.1*N* HCl (214); cf. (473).
C₁₆H₁₀N₂O₈.—Benzeneazocarbonylcoumaranone: 417, 250 in EtOH (368, 286 with NaOEt) (abs. of acetyl deriv. also described) (434).
C₁₆H₁₁N₃O.—Quinolineazophenol: 380 in EtOH (159).
5-Benzeneazo-8-hydroxyquinoline: 376 in EtOH; 518, 256 in HCl (159).
C₁₆H₁₂N₄O.—5-*p*-Aminobenzeneazo-8-hydroxyquinoline: 412 in EtOH (159).
C₁₆H₁₃N₃O₃.—*p*-Nitrobenzeneazoethylsalicylate: alkali salt, 531 in Me₂CO; 490 in EtOH; 465 in H₂O (643).
C₁₆H₁₆N₃O₂.—2-Carboxy-4-dimethylaminobenzene: 549, 503 (471).
3-Carboxy-4-dimethylaminobenzene: 531, 497 (471).
2'-Carboxy-4-dimethylaminobenzene (Methyl Red, C. I. 211): 517 in pH 1 soln.; 530 in pH 4.5 soln.; 447 in pH 13 soln. (613q); 530 in alk. soln. (58q) (double band, 548, 514 (469)); cf. (433, 471, 612q).
3'-Carboxy-4-dimethylaminobenzene: 538, 503 (471).
4'-Carboxy-4-dimethylaminobenzene: 512 in acid soln. (pH 1); 463 in alk. soln. (pH 13) (613q); 539, 495 (471).
C₁₆H₁₆N₂O.—Benzeneazo-*m*-cresetole: 348 in EtOH (479, 331 with NaOEt) (618).
Benzeneazo-*p*-cresetole: 313 in EtOH; 500, 410 in HCl (618).
C₁₆H₁₇N₃.—Benzeneazodimethyl-*o*-toluidine: 347 in EtOH; 493, 250 in 2*N* HCl (216).
C₁₆H₁₇N₃O.—2-Methoxy-4-dimethylaminobenzene: 575, 532 in acid H₂O (471).
4'-Methoxy-4-dimethylaminobenzene: 412 in EtOH; 510, 351 in dil. HCl; 473, 323 in HCl (diacid salt) (261); 549, 350, 200 in 0.1*N* HCl (214).
C₁₆H₁₇N₃O₃S.—*p*-Sulfobenzeneazodimethyl-*o*-toluidine: 374 in EtOH; 447, 311 in HCl (216).
C₁₆H₁₇N₃O₄S.—*m*-Methoxymethyl orange: 510, 480 (473).
C₁₆H₁₈N₂O₂.—Benzeneazodimethyldihydroresorcinol methyl ether: 379, 244 in EtOH (380).
C₁₆H₁₈ClN₃.—Azobenzenetrimethylammonium chloride: 448, 312 (216).
C₁₆H₁₈IN₃.—Azobenzenetrimethylammonium iodide: 437, 314 in EtOH; 498, (314) in EtOH + 1% HCl; 428 in H₂SO₄; (500), 435 in HCl (26); cf. (210, 260).
C₁₆H₁₀BrN₃O₃.—4'-Nitrobenzeneazo-2-bromo-1-naphthol: 608 in alk. EtOH (473).
C₁₆H₁₁BrN₂O.—*p*-Bromobenzeneazo- α -naphthol: 470 in EtOH; K salt, 476 in EtOH (595).
C₁₆H₁₁N₃O₃.—*o*-Nitrobenzeneazo- α -naphthol: 476 in EtOH (540 with NaOEt) (31).
m-Nitrobenzeneazo- β -naphthol (*m*-Nitroaniline Orange, C. I. 38): 557.6, 524.1 in H₂SO₄ (190).
p-Nitrobenzeneazo- α -naphthol: alkali salt, 630 in Me₂CO; 590 in EtOH; 568 in H₂O (643); (602), 576, (552) in H₂O; (623), 598, (572) in EtOH (468); cf. (501).
p-Nitrobenzeneazo- β -naphthol (*p*-Nitroaniline Red, C. I. 44): 578.3, 541.3 in H₂SO₄ (352); alkali salt, 587 in Me₂CO; 555 in EtOH (643); cf. (501).
C₁₆H₁₂N₂O.—Benzeneazo- α -naphthol: 496 in alk. H₂O, (468); 469, 405 in EtOH (29); 490, 406, 275 in EtOH (352); 585 in H₂SO₄ (196); cf. (595).

$C_{16}H_{12}N_2O$.—Benzeneazo- β -naphthol (Sudan I, C. I. 24): 514, 311 in EtOH; 311 in H_2SO_4 (352); 563, 517 in H_2SO_4 (196); cf. (423q, 619).

$C_{16}H_{12}N_2O_2$.—Benzeneazo-1, 5-dihydroxynaphthalene: 540 in alk. EtOH (174).

Benzeneazo-2, 7-dihydroxynaphthalene: 545, 498 in H_2SO_4 (196).

p-Hydroxybenzeneazo- α -naphthol: 490 in alk. EtOH (174).

p-Hydroxybenzeneazo- β -naphthol: 610, 490 in alk. EtOH (174).

$C_{16}H_{12}N_2O_3$.—*p*-Hydroxybenzeneazo-1, 3-dihydroxynaphthalene: 490 in alk. EtOH (174).

p-Hydroxybenzeneazo-1, 5-dihydroxynaphthalene: 550 in alk. EtOH (174).

p-Tolueneazocarbonylcoumaranone: 431, 253 in EtOH (369, 288 with NaOEt) (434).

$C_{16}H_{12}N_2O_4S$.—Benzeneazo- α -naphthol-2-sulfonic acid: Na salt, (424q).

Benzeneazo- α -naphthol-4-sulfonic acid: 547, 500 in H_2SO_4 (196).

Benzeneazo- β -naphthol-5-sulfonic acid: 525, 493 in H_2SO_4 (196).

Benzeneazo- β -naphthol-6-sulfonic acid: 526.5, 495 in H_2SO_4 (196); Na salt, 493, 315 in H_2O (352).

Benzeneazo- β -naphthol-7-sulfonic acid: 534 in H_2SO_4 (196).

Benzeneazo- β -naphthol-8-sulfonic acid: 522, 495 in H_2SO_4 (196).

p-Sulfobenzeneazo- α -naphthol (Orange I, C. I. 150): 476, 267, 232 in H_2O (179q); cf. (231q, 420q, 422q, 468, 519q, 595).

p-Sulfobenzeneazo- β -naphthol (Orange II, C. I. 151): 490 in H_2O (271); cf. (231q).

$C_{16}H_{12}N_2O_5S$.—*m*-Sulfo-*o*-hydroxybenzeneazo- β -naphthol (Na salt, C. I. 169), Pontachrome Violet S. W.: 548 in H_2O (concd.), 515 (dil.) (269).

$C_{16}H_{12}N_2O_7S_2$.—Benzeneazo- α -naphthol-4, 8-disulfonic acid: 557, 500 in H_2SO_4 (196).

Benzeneazo- β -naphthol-3, 6-disulfonic acid (Na salt, Orange R, C. I. 28): 528, 496 in H_2SO_4 (196); 500, 321 in H_2O (352); cf. (231q).

Benzeneazo- β -naphthol-6, 8-disulfonic acid (Na salt, Orange G, C. I. 27): 503, 487 in H_2SO_4 (196); 491, 320 in H_2O (352); cf. (162, 271).

p-Sulfobenzeneazo- α -naphthol-2-sulfonic acid: Na salt (424q).

$C_{16}H_{12}N_2O_8S_2$.—Benzeneazo-1, 8-dihydroxynaphthalene-3, 6-disulfonic acid (Na salt, C. I. 29, Chromotrop 2R): 510 in H_2O (271).

$C_{16}H_{12}N_2O_8S_2$.—*p*-Hydroxybenzeneazo- α -naphthol-3, 6-disulfonic acid: 560, 494 (473).

$C_{16}H_{12}N_2O_9S_2$.—1-Hydroxy-3, 6-sulfonaphthaleneazoresorcinol: 491 in alk. soln.; 545, 491 in acid soln. (473).

$C_{16}H_{12}N_4O_2$.—2-(4'-Nitrobenzeneazomethylene)-1, 2-dihydroquinoline: 545 in EtOH; 527 in H_2SO_4 ; hydrochloride, 460 in EtOH; data given for isomeric phenylhydrazones (341).

$C_{16}H_{12}N_4O_3S_2$.—2-*p*-Nitrobenzeneazo-1-amino-8-naphthol-3, 6-disulfonic acid: 522 in 1% HCl; 556 in 1% NaOH; 584 in 10% NaOH; 535 in H_2O (60q).

$C_{16}H_{13}N_3$.—Benzeneazo- α -naphthylamine: 293 in H_2SO_4 (352).

Benzeneazo- β -naphthylamine (Oil Yellow A. B., C. I. 22): 585 in H_2SO_4 (196); 453, 322 in H_2SO_4 ; 474, 306 in EtOH (352); cf. (423q).

$C_{16}H_{13}N_3O$.—*p*-Hydroxybenzeneazo- β -naphthylamine: 565 in alk. EtOH (174).

$C_{16}H_{13}N_3O_3S$.—Benzeneazo- β -naphthylamine-5-sulfonic acid: 543, 498 in H_2SO_4 (196).

Benzeneazo- β -naphthylamine-6-sulfonic acid: 545, 495 in H_2SO_4 (196).

Benzeneazo- β -naphthylamine-7-sulfonic acid: 545, 495 in H_2SO_4 (196).

$C_{16}H_{13}N_3O_4S$.—*o*-Aminosulfobenzeneazo- β -naphthol: 567.5, 537 (123).

m-Aminosulfobenzeneazo- β -naphthol: 556.3, 526 (123).

p-Aminosulfobenzeneazo- β -naphthol: 563, 533.3 (123).

$C_{16}H_{13}N_3O_6S$.—1-Amino-4-sulfo-2-naphtholazoresorcinol: 640, 590.5, 550 in alk. soln.; 583.5, 543, 513.5 in acid soln. (123).

1-Amino-6-sulfo-2-naphtholazoresorcinol: 560, 510, 472 in H_2O ; 625, 582, 540 with NH_4OH (123).

1-Amino-7-sulfo-2-naphtholazoresorcinol: 566, 520, 481 in H_2O ; 633, 588, 546 with NH_4OH (123).

1-Amino-8-sulfo-2-naphtholazoresorcinol: 547, 514 in H_2O ; 610, 568, 530 with NH_4OH (123).

2-Amino-3-sulfo-1-naphtholazoresorcinol: 560, 483 in H_2O ; 630, 541.5, 502.5 with NH_4OH (123).

2-Amino-4-sulfo-1-naphtholazoresorcinol: 561, 518, 478 in H_2O ; 528 with NH_4OH (123).

2-Amino-5-sulfo-1-naphtholazoresorcinol: 574, 529, 476 in H_2O ; 586, 541 with NH_4OH (123).

$C_{16}H_{13}N_3O_6S_2$.—Benzeneazo- β -naphthylamine-3, 6-disulfonic acid: 539, 495 in H_2SO_4 (196).

$C_{16}H_{13}N_3O_7S$.—2-Amino-4-sulfo-1, 8-dihydroxynaphthaleneazoresorcinol: 518 in alk. soln. (123).

$C_{16}H_{13}N_3O_7S_2$.—Benzeneazo-1, 8-aminonaphthol-3, 6-disulfonic acid: 541 in NaOH; 529, 494 in HCl; 545, 502 in HOAc (473); 495 in 10% NaOH; 530 in H_2O (60).

2, 4-Disulfo-1-aminobenzeneazo- β -naphthol: 507.5, 483 in H_2O ; 560, 528.5 in H_2SO_4 ; 505, 479.5 in EtOH (123).

2, 5-Disulfo-1-aminobenzeneazo- β -naphthol: 509.5, 478 in H_2O ; 562, 538 in H_2SO_4 ; 502, 479.5 in EtOH (123).

$C_{16}H_{13}N_3O_8S_2$.—1-Amino-3, 6-disulfo-2-naphtholazoresorcinol: 566.5, 526, 486.5 in H_2O ; 635, 586.5, 550 with NH_4OH (123).

1-Amino-6, 8-disulfo-2-naphtholazoresorcinol: 543, 508.2 in H_2O ; 611.5, 536, 497 with NH_4OH (123).

2-Amino-3, 6-disulfo-1-naphtholazoresorcinol: 569, 537.5, 502 in H_2O ; 635, 582.5 with NH_4OH (123).

2-Amino-3, 8-disulfo-1-naphtholazoresorcinol: 564, 480.5 in H_2O ; 637.5, 588 with NH_4OH (123).

2-Amino-4, 8-disulfo-1-naphtholazoresorcinol: 560, 523, 483 in H_2O ; 629, 560 with NH_4OH (123).

$C_{16}H_{13}N_3O_{10}S_2$.—2-Amino-3, 6-disulfo-1, 8-dihydroxynaphthaleneazoresorcinol: 564.5, 537 in alk. soln.; 591.5, 549.5 in acid soln. (123).

$C_{16}H_{13}N_3O_{12}S_3$.—1-Amino-3, 6, 8-trisulfo-2-naphtholazoresorcinol: 555, 521 in H_2O ; 626.5, 578, 541.5 with NH_4OH (123).

$C_{16}H_{15}BrN_2O$.—*p*-Bromobenzene-1-azo-1', 2', 3', 4'-tetrahydro-4-naphthol: K salt, 476 in EtOH (595).

$C_{16}H_{15}N_3O_3$.—*p*-Nitrobenzene-1-azo-1', 2', 3', 4'-tetrahydro-4-naphthol: K salt, 581 in EtOH (595).

$C_{16}H_{15}N_3O_4$.—*p*-Nitrobenzeneazoeugenol: alkali salt, 610 in Me_2CO ; 556 in EtOH; 535 in H_2O (643); cf. (501).

$C_{16}H_{15}N_2O$.—Benzeneazotetrahydro- α -naphthol: 470, 430 in alk. H_2O ; 471 in EtOH (595).

$C_{16}H_{17}N_3O_3$.—*p*-Nitrobenzeneazocarcavacrol: alkali salt, 606 in Me_2CO ; 545 in EtOH; 511 in H_2O (643); cf. (501).

p-Nitrobenzeneazothymol: alkali salt, 610 in Me_2CO ; 559 in EtOH; 515 in H_2O (643); cf. (501).

$C_{16}H_{18}ClN_2O_3S$.—2-Chloro-4-diethylamino-4'-sulfoazobenzene: 510 in acid soln. (pH 1); 470 in alk. soln. (pH 12) (613q).

$C_{16}H_{18}N_2O$.—Benzeneazothymol: 455, 410 in alk. H_2O (468).

p-Tolueneazo-*p*-cresetole: 325 in EtOH; 495, 420 in HCl (618).

$C_{16}H_{18}N_2O_2$.—Azophenetole: 384 in EtOH (431 with NaOEt) (619).

$C_{16}H_{18}N_2O_3$.—*p*-Azoxyphenetole: 360 in EtOH (533).

$C_{16}H_{18}N_2O_5S$.—*o*-Methyl-*m*-isopropyl-*p*-sulfobenzeneazoresorcinol: Na salt, 440 in H_2O (271).

$C_{16}H_{18}N_4O$.—4-Acetyl-amino-4'-dimethylaminoazobenzene: 540 (473).

- C₁₆H₁₃N₃O.**—4-Ethoxy-4'-dimethylaminoazobenzene: 548 (473).
C₁₅H₁₃N₃O₃S.—4-Diethylamino-4'-sulfoazobenzene (Ethyl Orange): 510 in acid soln. (pH 1); 470 in alk. soln. (pH 13) (613q).
C₁₆H₁₃N₃O₅S.—2, 2'-Dimethoxy methyl orange: 537, 495 (473).
C₁₆H₂₀N₄.—Tetramethyl-*p*-diaminoazobenzene: 450 in EtOH; 692, (514), 450 in dil. HOAc; 530, 497 in 3% HCl (diacid salt); (498), 410 in H₂SO₄ (triacid salt) (310); cf. (475).
C₁₇H₁₁N₃O₅.—*p*-Nitrobenzeneazo-*n*-butylsalicylate: alkali salt, 556 in Me₂CO; 496 in EtOH; 480 in H₂O (643).
p-Nitro- α -naphthaleneazosalicic acid: K salt, 541 in EtOH (595).
C₁₇H₁₂N₂O₆S.—*o*-Carboxybenzeneazo- α -naphthol-2-sulfonic acid: Na salt (424q).
C₁₇H₁₃N₃O₃.—*o*-Nitro-*p*-tolueneazo- β -naphthol (Toluidine Red, C. I. 69): 569.4, 533.2 in H₂SO₄ (190); 561 in gelatin (114).
C₁₇H₁₄N₂O.—*o*-Tolueneazo- α -naphthol: 406, 275 in EtOH (352).
o-Tolueneazo- β -naphthol: 515, 313 in EtOH; 313 in H₂SO₄ (352).
p-Tolueneazo- α -naphthol: 402 in EtOH; 300 in H₂SO₄ (352).
p-Tolueneazo- β -naphthol: 495, 312 in EtOH (352).
C₁₇H₁₄N₂O₄S.—*o*-Tolueneazo- β -naphthol-6-sulfonic acid: Na salt, 496, 316 in H₂O; 311 in H₂SO₄ (352).
p-Tolueneazo- β -naphthol-6-sulfonic acid: Na salt, 498, 316 in H₂O (352).
o-Tolueneazo- α -naphthol-2-sulfonic acid: Na salt (424q).
p-Tolueneazo- α -naphthol-2-sulfonic acid: Na salt (424q).
C₁₇H₁₄N₂O₅S.—2-Anisoleazo- α -naphthol-6-sulfonic acid (Na salt, Anisole Red): 522 in gelatin (114).
C₁₇H₁₄N₂O₇S₂.—*o*-Tolueneazo- β -naphthol-3, 6-disulfonic acid: Na salt, 503, 323 in H₂O (352).
o-Tolueneazo- β -naphthol-6, 8-disulfonic acid: Na salt, 491, 324 in H₂O; 320 in H₂SO₄ (352).
p-Tolueneazo- β -naphthol-3, 6-disulfonic acid: Na salt, 500, 322 in H₂O (352).
p-Tolueneazo- β -naphthol-6, 8-disulfonic acid: Na salt, 497, 323 in H₂O (352).
C₁₇H₁₄N₄O₂.—1-Methyl-2-(4'-nitrobenzeneazomethylene)-1, 2-dihydroquinoline: hydrochloride, 527 in H₂SO₄ (343).
C₁₇H₁₅N₃.—*o*-Tolueneazo- α -naphthylamine: 298 in H₂SO₄ (352).
o-Tolueneazo- β -naphthylamine (Oil Yellow OB, C. I. 61): 474, 306 in EtOH; 455, 323 in H₂SO₄ (352); cf. (220q).
p-Tolueneazo- β -naphthylamine: 473, 305 in EtOH; 323 in H₂SO₄ (352).
C₁₇H₁₆N₄O₂.—2-(4'-Nitrobenzeneazomethylene)-3, 3-dimethylindoline: hydrochloride, 469 in HOAc (347).
C₁₇H₁₇N₃.—2-(Benzeneazomethylene)-3, 3-dimethylindoline: hydrochloride, 465; base, 435 (347).
C₁₇H₁₃N₃O₂.—2-Carboxy-4'-diethylaminoazobenzene: 512 in pH 1 soln.; 522 in pH 4 soln.; 499 in pH 12 soln. (613q).
4-Dimethylamino-4'-ethylcarboxyazobenzene: 444, 275 in EtOH (214).
C₁₈H₁₂N₄O.—Quinolineazo-8-hydroxyquinoline: 403 in EtOH (159).
C₁₈H₁₄N₂O.—Diphenylazophenol: 451 in alk. H₂O (468).
C₁₈H₁₄N₂O₂.—*p*-Hydroxydiphenylazophenol; monobasic salt, 492 (NaHCO₃); dibasic salt, 470 (NaOH) (463).
Benzeneazo- α -naphthyl acetate: 376 in EtOH (619).
Benzeneazo- β -naphthyl acetate: 472, 282 in EtOH (619).
p-Acetylbenzeneazo- α -naphthol: 467, 315 in EtOH; 526, 300 in NaOH (258).
p-Acetylbenzeneazo- β -naphthol: 476, 318 in EtOH; 513, 286 in NaOH (258).
C₁₈H₁₄N₂O₆S.—*o*-Methylcarboxybenzeneazo- α -naphthol-2-sulfonic acid: Na salt (424q).
C₁₈H₁₅N₃O₃S.—4-Phenylamino-4'-sulfoazobenzene (Na salt, C. I. 143): 527 in pH 1 soln.; 456 in pH 12 soln. (613q).
C₁₈H₁₅N₃O₅S₂.—Benzeneazo-8-acetylamino-1-naphthol-3, 6-disulfonic acid (Na salt, C. I. 31): Kiron Red G (22).
C₁₈H₁₆N₂O.—Benzeneazo- α -naphthol ethyl ether: 400 in EtOH (619).
C₁₈H₁₇N₃.—Benzeneazodimethyl- α -naphthylamine: 570, 525 in acid H₂O (471).
C₁₈H₁₇N₃O₃S.—4-Sulfonaphthaleneazodimethylaniline: (473).
C₁₈H₁₈N₃O₃.—2-(4'-Nitro-2'-methoxybenzeneazomethylene)-3, 3-dimethylindoline: hydrochloride, 484 in HOAc (347).
C₁₉H₁₄N₂O₂.—*p*-Benzoylbenzeneazophenol: 481, 333 in EtOH (?) (471); 370 in EtOH; 476 in NaOH (258).
C₁₉H₁₄N₄O₂.—*p*-Nitrobenzylideneaminoazobenzene: 383 in EtOH (521).
C₁₉H₁₅N₃.—Benzylideneaminoazobenzene: 383 in EtOH (521).
C₁₉H₁₅N₃O.—*p*-Hydroxybenzylideneaminoazobenzene: 375 in EtOH (521).
C₁₉H₁₇N₃O₃S.—*p*-Sulfobenzeneazobenzylaminobenzene: 448, (280) in dil. NaOH; 496 in dil. HCl (216); 560 in pH 1 soln. (613q).
C₁₉H₁₈N₂O₇S₂.—Pseudocumeneazo- β -naphthol-3, 6-disulfonic acid (Na salt, C. I. 80): 504, 330 in H₂O (179q); cf. (422q).
C₁₉H₁₉N₃O.—2-(4'-Acetylbenzeneazomethylene)-3, 3-dimethylindoline: hydrobromide, 456 in EtOH (347).
C₁₉H₁₉N₃O₄S.—*p*-Sulfo-*o*-methoxybenzeneazodimethyl- α -naphthylamine: 580, 525, 500 in acid H₂O (595).
C₁₉H₂₀N₄O₂.—2-(4'-Nitrobenzeneazomethylene)-3, 3-diethylindoline: hydrochloride, 472 in HOAc (347).
C₂₀H₁₃BrN₂O.—*p*-Bromobenzene-1-azo-4-anthrol: 503 in EtOH; K salt, 588 in EtOH (595).
C₂₀H₁₃N₃O₃.—*p*-Nitrobenzeneazoanthrol: 460 in EtOH (595).
p-Nitrobenzene-1-azo-4-anthrol: 482 in EtOH; K salt, 650 in EtOH (595).
3'-Nitro-4-hydroxyazonaphthalene: 557 in H₂O (471).
C₂₀H₁₄N₂O.—Benzeneazoanthrol: 466 in EtOH; K salt, 580 in EtOH (595).
Benzene-1-azo-4-anthrol: 499 in EtOH; K salt, 549 in EtOH (595).
 α -Naphthaleneazo- β -naphthol (Autol Red RL, C. I. 82): 628, 585.8 in H₂SO₄ (190).
 β -Naphthaleneazo- β -naphthol: 483 in EtOH (85).
 β , β' -Azoxynaphthalene: 337, 282, 266 in EtOH (?) [550 after exposure to light] (85).
C₂₀H₁₄N₂O₄S.—*p*-Sulfobenzene-1-azo-4-anthrol: 503 in EtOH; K salt, 571 in EtOH (595).
 α -Naphthaleneazo- α -naphthol-2-sulfonic acid: Na salt (424q).
 β -Naphthaleneazo- α -naphthol-2-sulfonic acid: Na salt (424q).
4-Sulfo- α -naphthaleneazo- α -naphthol (Na salt, C. I. 175): (231).
4-Sulfo- α -naphthaleneazo- β -naphthol (Na salt, Fast Red A.S., C. I. 176): 500 in H₂O (concd.); 505 (dil.) (269); cf. (231, 390, 391, 516).
C₂₀H₁₄N₂O₇S₂.— α -Naphthaleneazo- β -naphthol-3, 6-disulfonic acid (Na salt, Bordeaux B, C. I. 88): 510 in H₂O (concd.); 515 (dil.) (269); cf. (421q, 516q, 588).
 α -Naphthaleneazo- β -naphthol-6, 8-disulfonic acid (Na salt, Crystal Scarlet, C. I. 89): 508, 329.5 in H₂O (391q); cf. (388q, 518q).
4-Sulfo- α -naphthaleneazo- α -naphthol-2-sulfonic acid: Na salt (424q).
4-Sulfo- α -naphthaleneazo- α -naphthol-4-sulfonic acid (Na salt, C. I. 179): "Azorubin," infra-red abs. (511); Pontacyl Ruby G, 505 in H₂O (concd.); 512 (dil.) (269); Chromotrope FB, 555.9, 519.5 in dil. HOAc; 569.5 in H₂SO₄; Chrome Lake, 620.7, 575.7, 537.5 in 90% HOAc + HCl; 614.7, 568.2, 530.3 in H₂SO₄ (190).

$C_{20}H_{14}N_2O_8S_2$.— α -Naphthaleneazo-1, 8-dihydroxynaphthalene-3, 6-disulfonic acid (Na salt, C. I. 90): 533 in 0.1N HCl; 519 in 0.1N NaOH; 535 in H_2O (pH 6.75) (119).

$C_{20}H_{14}N_2O_{10}S_3$.— α -Naphthaleneazo- α -naphthol-3, 6, 8-trisulfonic acid: Na salt, 534 in 0.1N HCl; 514 in 0.1N NaOH; 535 in pH 6.75 soln. (119).

4-Sulfo- α -naphthaleneazo- β -naphthol-3, 6-disulfonic acid (Na salt, Amarant, C. I. 184): 522, 331 in H_2O (1799); cf. (4229).

4-Sulfo- α -naphthaleneazo- β -naphthol-6, 8-disulfonic acid (Na salt, C. I. 185): Cochineal Red A, 515, 500 on wool (522).

$C_{20}H_{15}N_3$.— α -naphthaleneazo- α -naphthylamine: (2319).

β -Naphthaleneazo- β -naphthylamine: (2319).

$C_{20}H_{15}N_3O_4S$.—4-Sulfo-1-naphthylamineazo- β -naphthol: Na salt, 500 in H_2O ; 629, 587.5 in H_2SO_4 (123).

5-Sulfo-1-naphthylamineazo- β -naphthol: Na salt, 499 in H_2O ; 608.5, 568 in H_2SO_4 (123).

6-Sulfo-1-naphthylamineazo- β -naphthol: Na salt, 499 in H_2O ; 607.5, 568.5 in H_2SO_4 (123).

7-Sulfo-1-naphthylamineazo- β -naphthol: Na salt, 500 in H_2O ; 572 in H_2SO_4 (123).

1-Sulfo-2-naphthylamineazo- β -naphthol: Na salt, 505.5 in H_2O ; 589.5, 552.5 in H_2SO_4 (123).

5-Sulfo-2-naphthylamineazo- β -naphthol: Na salt, 492.5 in H_2O ; 576, 541.5 in H_2SO_4 (123).

6-Sulfo-2-naphthylamineazo- β -naphthol: Na salt, 494 in H_2O ; 579.5, 543.5 in H_2SO_4 (123).

7-Sulfo-2-naphthylamineazo- β -naphthol: Na salt, 493 in H_2O ; 580, 543 in H_2SO_4 (123).

8-Sulfo-2-naphthylamineazo- β -naphthol: Na salt, 494.5 in H_2O ; 581, 544.5 in H_2SO_4 (123).

$C_{20}H_{15}N_3O_7S_2$.— α -Naphthaleneazo-8-amino- α -naphthol-3, 6-disulfonic acid: Na salt, 544 in 0.1N HCl; 545 in 0.1N NaOH; 548 in pH 6.75 soln. (11).

3, 6-Disulfo-1-naphthylamineazo- β -naphthol: Na salt, 498.5 in H_2O ; 604.5, 568 in H_2SO_4 (123).

3, 8-Disulfo-1-naphthylamineazo- β -naphthol: Na salt, 492 in H_2O ; 578.5, 542 in H_2SO_4 (123).

4, 7-Disulfo-1-naphthylamineazo- β -naphthol: Na salt, 498.5 in H_2O ; 617, 575 in H_2SO_4 (123).

4, 8-Disulfo-1-naphthylamineazo- β -naphthol: Na salt, 491 in H_2O ; 540 in H_2SO_4 (123).

3, 6-Disulfo-2-naphthylamineazo- β -naphthol: Na salt, 493.5 in H_2O (123).

4, 7-Disulfo-2-naphthylamineazo- β -naphthol: Na salt, 495.5 in H_2O ; 582, 542.5 in H_2SO_4 (123).

4, 8-Disulfo-2-naphthylamineazo- β -naphthol: Na salt, 492 in H_2O ; 581.5, 544.5 in H_2SO_4 (123).

5, 7-Disulfo-2-naphthylamineazo- β -naphthol: Na salt, 490.5 in H_2O ; 580, 543 in H_2SO_4 (123).

6, 8-Disulfo-2-naphthylamineazo- β -naphthol: Na salt, 494.5 in H_2O ; 583.5, 546 in H_2SO_4 (123).

$C_{20}H_{15}N_3O_{10}S_3$.—5-Sulfo-1-naphthylamineazo- β -naphthol-3, 6-disulfonic acid: Na salt, 594.5, 555 in H_2SO_4 (123).

6-Sulfo-1-naphthylamineazo- β -naphthol-3, 6-disulfonic acid: Na salt, 572, 537.5 in H_2SO_4 (123).

$C_{20}H_{15}N_3O_{13}S_4$.—3, 6-Disulfo-2-naphthylamineazo- β -naphthol-3, 6-disulfonic acid: Na salt, 495 in H_2O ; 583, 547 in H_2SO_4 (123).

$C_{20}H_{16}N_2O_2$.—*p*-Benzoylbenzeneazo-*p*-cresol: 327 in EtOH; 513, 341 in NaOH (258); cf. (618).

$C_{20}H_{16}N_2O_6S$.—4-Sulfo-1, 5-diamino-2-naphtholazo- α -naphthol: Na salt, 521.5 in alk. soln.; 518 in acid soln. (123).

$C_{20}H_{16}N_4O_{11}S_3$.—3-Sulfo-2, 5-diamino-1-naphtholazo- β -naphthol-3, 6-disulfonic acid: Na salt, 496.5 in H_2SO_4 (123).

$C_{20}H_{17}N_3O$.—*p*-Methoxybenzylideneaminoazobenzene: 327 in EtOH; 513, 341 in NaOH (521).

$C_{20}H_{18}N_4O_8S_2$.—*p*-Acetylaminobenzeneazo-8-acetyl-amino- α -naphthol-3, 6-disulfonic acid (Na salt, C. I. 57): Pontacyl Carmine 6B, 514 in H_2O (concd.); 525 (dil.) (269).

$C_{20}H_{20}N_2O$.—*p*-Cymeneazo- β -naphthol: 532 in H_2SO_4 (677).

$C_{20}H_{20}N_2O_3S$.—*p*-Cymeneazo- α -naphthalene-4-sulfonic acid: Na salt, 460 in H_2O (677).

$C_{20}H_{20}N_2O_4S$.—*o*-Methyl-*m*-isopropyl-*p*-sulfo benzeneazo- β -naphthol: Na salt, 495 in H_2O (271).

$C_{20}H_{20}N_2O_7S_2$.—*o*-Methyl-*m*-isopropylbenzeneazo- β -naphthol-6, 8-disulfonic acid: Na salt, 492 in H_2O (271).

$C_{20}H_{20}N_2O_8S_2$.—*o*-Methyl-*m*-isopropylbenzeneazo-1, 8-dihydroxynaphthalene-3, 6-disulfonic acid: Na salt, 520 in H_2O (271).

$C_{20}H_{20}N_2O_{10}S_3$.—*o*-Methyl-*m*-isopropyl-*p*-sulfo benzeneazo- β -naphthol-3, 6-disulfonic acid: Na salt, 498 in H_2O (677). (The 6, 8-disulfo isomer in H_2O , 485 (677).)

$C_{20}H_{20}N_2O_{11}S_3$.—*o*-Methyl-*m*-isopropyl-*p*-sulfo benzeneazo-1, 8-dihydroxynaphthalene-3, 6-disulfonic acid: Na salt, 525 in H_2O (271).

$C_{20}H_{21}N_3$.—*p*-Cymeneazo- β -naphthylamine: 570 in H_2SO_4 (677).

$C_{20}H_{26}N_2$.—Azocymene: 465 in H_2SO_4 (677).

$C_{21}H_{13}N_3O_5$.—*p*-Nitronaphthalene-1-azo-4-naphthol-3-carboxylic acid: 470 in EtOH; K salt, 606 in EtOH (595).

$C_{22}H_{17}N_3O_3S$.—4-Diphenylazo- α -naphthylamine-4-sulfonic acid: 575 in dil. HCl (468).

$C_{22}H_{18}N_4O_4S$.—8-Sulfo-4-amino-1-phenylnaphthylamineazoresorcinol: 561.5 with excess H_2SO_4 (123).

$C_{22}H_{19}N_3O_7S_2$.—3, 6-Disulfo-8-hydroxy- α -naphthaleneazoethyl- α -naphthylamine (Na salt, C. I. 307): Pontacyl Sulfon Violet R, 530 in H_2O (concd.); 550 (dil.) (269).

$C_{22}H_{20}N_2O_2$.—*p*-Benzoylbenzeneazo-*p*-cresotole: 326 in EtOH (618).

$C_{23}H_{16}N_2O_2$.—*p*-Benzoylbenzeneazo- α -naphthol: 461, 330 in EtOH; 535, 300 in NaOH (258).

p-Benzoylbenzeneazo- β -naphthol: 486, 320 in EtOH; 513, 283 in NaOH (258).

$C_{23}H_{16}N_4O_4$.—*p*-Nitrobenzeneazo- β -hydroxynaphthoic acid anilide (Fast Red GG): 570 in H_2SO_4 (677).

$C_{23}H_{22}N_4O_3$.—Phenyl-*p*-dimethylaminobenzeneazobenzoyl-amino)-acetic acid: 461, 375 (306), 274 in EtOH (abs. of *d*, *l*, and *dl* forms identical) (649).

$C_{24}H_{16}ClN_3O_7S_3$.—Benzenylaminothiocresolazo-8-chloro- α -naphthol-3, 6-disulfonic acid (Na salt, C. I. 128): Diamine Rose BD on cotton and silk (627).

$C_{25}H_{19}N_3O_4$.— β -Naphthol deriv. of diazotized phenyl-*p*-aminobenzoyl-amino)-acetic acid: 486, (381), 314, (271) in H_2O ; 516, 443 with excess alkali; 553, 522 with excess acid (abs. of *d*, *l* and *dl* forms identical) (639).

$C_{26}H_{17}N_3O_6$.—*p*-Nitrobenzeneazophenolphthalein: alkali salt, 568 in Me_2CO ; 508 in EtOH; 495 in H_2O (643); cf. (501).

$C_{26}H_{21}N_5O_8S_2$.—3-Sulfo-2, 5-diamino- α -naphtholazophenyl- β -naphthylamine-5-hydroxy-7-sulfonic acid: 493.8 in dil. H_2SO_4 (123).

$C_{27}H_{20}N_4O_8S_2$.—8-Benzoylamino-2-amino-3, 5-disulfo- α -naphtholazo- β -naphthol: 525, 493 in H_2SO_4 (123).

Aminobenzoyl-H-acid-azo- β -naphthol: 608, 578 in H_2SO_4 (123).

Azo dyes derived from substituted pyrroles: (33, 378, 399, 408, 409).

p-Nitrobenzeneazocephaline: 610 in alk. Me_2CO ; 550 in alk. EtOH; 525 in alk. H_2O (502).

p-Nitrobenzeneazoemetamine: 627.5 in alk. Me_2CO ; 590 in alk. EtOH; 570 in alk. H_2O (502).

TABLE 2.—POLYAZO DYES

$C_{18}H_{18}N_6O_3$.—*p*-Nitrobenzeneazobenzeneazophenol: 395 in EtOH; Na salt, 546 in EtOH (521).

$C_{18}H_{14}N_4O$.—Benzeneazobenzeneazophenol: 435 (111); 497 in alk. H_2O (463).

$C_{18}H_{14}N_4O_2$.—Phenolazobenzeneazophenol: disodium salt, 515 in H_2O (463).

$C_{18}H_{18}N_8$.—Benzene-*m*-disazo-*bis-m*-phenylenediamine (hydrochloride, Bismarck Brown Y, C. I. 331): infra-red abs. (296); 460 on cotton (627); cf. (231).

$C_{20}H_{18}N_6$.—Benzeneazobenzeneazodimethylaniline: 509 (111).

$C_{22}H_{16}N_7O_{11}S_2$.—2-*p*-Nitrobenzeneazo-1-amino-8-naphthol-3, 6-disulfo-7-azo-*p*-nitrobenzene: Na salt, 612 in H_2O (609).

$C_{22}H_{16}N_4O$.—Benzeneazobenzeneazo- α -naphthol: 655, 625 in H_2SO_4 (196).

Benzeneazobenzeneazo- β -naphthol (Sudan III, C. I. 248): 640.9, 589.8 in H_2SO_4 (190); cf. (196).

$C_{22}H_{16}N_4O_3S$.—*p*-Sulfobenzeneazobenzeneazo- α -naphthalene: Na salt, 507 in H_2O ; 516 in 0.02N HCl; 663 in H_2SO_4 (436).

$C_{22}H_{16}N_4O_4S$.—Benzeneazobenzeneazo- α -naphthol-4-sulfonic acid (Na salt, C. I. 249): 627, 575 in H_2SO_4 (196).

Benzeneazobenzeneazo- β -naphthol-6-sulfonic acid: 610, 580 in H_2SO_4 (196).

Benzeneazobenzeneazo- β -naphthol-8-sulfonic acid: 598, 572 in H_2SO_4 (196).

$C_{22}H_{16}N_4O_6S_2$.—*p*-Sulfobenzeneazo-*o*-sulfobenzeneazo- α -naphthalene: Na salt, 524 in H_2O ; 542 in alk. H_2O ; 519 in 0.02N HCl; 643 in H_2SO_4 (436).

p-Sulfobenzeneazobenzeneazo- α -naphthalene-7-sulfonic acid: Na salt, 532 in H_2O (520 with alkali); 496 in 0.02N HCl; 657 in H_2SO_4 (436).

$C_{22}H_{16}N_4O_7S_2$.—Benzeneazobenzeneazo- α -naphthol-4, 8-disulfonic acid (Na salt, C. I. 251): 630, 575 in H_2SO_4 (196).

Benzeneazobenzeneazo- β -naphthol-3, 6-disulfonic acid (Na salt, C. I. 253): 616, 573 in H_2SO_4 (196).

Benzeneazobenzeneazo- β -naphthol-6, 8-disulfonic acid (Na salt, C. I. 252): 592, 550 in H_2SO_4 (196). Brilliant Croceine M, 545 on silk (627).

p-Sulfobenzeneazo-*o*-sulfobenzeneazo- β -naphthol (Na salt, Biebrich Scarlet, C. I. 280): (231).

$C_{22}H_{16}N_4O_9S_3$.—*p*-Sulfobenzeneazo-*o*-sulfobenzeneazo- α -naphthalene-7-sulfonic acid: Na salt, 539 in H_2O ; 530 in 0.02N HCl; 638 in H_2SO_4 (436).

$C_{22}H_{16}N_4O_{10}S_3$.—Benzeneazobenzeneazo- α -naphthol-3, 6, 8-trisulfonic acid: 620, 573 in H_2SO_4 (196).

Benzeneazobenzeneazo- β -naphthol-3, 6, 8-trisulfonic acid: 600, 555 in H_2SO_4 (196).

p-Sulfobenzeneazobenzeneazo- α -naphthol-4, 8-disulfonic acid: 642 in H_2SO_4 (196).

p-Sulfobenzeneazobenzeneazo- β -naphthol-3, 6-disulfonic acid: 607, 575 in H_2SO_4 (196).

p-Sulfobenzeneazobenzeneazo- β -naphthol-6, 8-disulfonic acid: 587 in H_2SO_4 (196).

p-Sulfobenzeneazo-*o*-sulfobenzeneazo- α -naphthol-4-sulfonic acid: 688, 596 in H_2SO_4 (196).

p-Sulfobenzeneazo-*o*-sulfobenzeneazo- β -naphthol-8-sulfonic acid: 620 in H_2SO_4 (196).

$C_{22}H_{16}N_4O_{13}S_4$.—*p*-Sulfobenzeneazo-*o*-sulfobenzeneazo- α -naphthol-4, 8-disulfonic acid: 631, 584 in H_2SO_4 (196).

p-Sulfobenzeneazo-*o*-sulfobenzeneazo- β -naphthol-3, 6-disulfonic acid: 630, 575 in H_2SO_4 (196).

p-Sulfobenzeneazo-*o*-sulfobenzeneazo- β -naphthol-6, 8-disulfonic acid: 589 in H_2SO_4 (196).

$C_{22}H_{16}N_4O_{16}S_5$.—*p*-Sulfobenzeneazo-*o*-sulfobenzeneazo- α -naphthol-3, 6, 8-trisulfonic acid: 629, 582 in H_2SO_4 (196).

p-Sulfobenzeneazo-*o*-sulfobenzeneazo- β -naphthol-3, 6, 8-trisulfonic acid: 607, 580 in H_2SO_4 (196).

$C_{22}H_{16}N_6O_9S_2$.—*p*-Nitrobenzeneazo-3, 6-disulfo-8-amino- α -naphtholazobenzene (Na salt, C. I. 246): Agalma Black 10B, 620 in H_2O (129); cf. (609); 600 in H_2O (concd.); 620 (dil.) (269).

$C_{22}H_{24}N_6$.—4, 4'-Benzenedisazodimethylaniline: (570), 544, 510 (473).

$C_{24}H_{18}N_4O_2$.—Diphenyldisazo-*bis*-phenol: monosodium salt, 496 (NaHCO₃); disodium salt, 370 (NaOH) (463).

5, 5'-*Bis*-benzeneazo-2, 2'-diphenol: 344 in EtOH (?) (544).

$C_{24}H_{18}N_4O_8S_2$.—Diphenyldisazo-*bis-p*-sulfophenol: 475 in alk. H_2O (468).

$C_{24}H_{18}N_6O$.—Benzeneazobenzeneazobenzeneazophenol: 436 (111).

$C_{24}H_{20}N_4O$.—*o*-Tolueneazo-*o*-tolueneazo- β -naphthol (Sudan IV, C. I. 258): 657.4, 605.5 in H_2SO_4 (190); cf. (516).

$C_{24}H_{20}N_4O_4S$.—*o*-Tolueneazo-*o*-tolueneazo- α -naphthol-4-sulfonic acid: 629, 589 in H_2SO_4 (196).

o-Tolueneazo-*o*-tolueneazo- β -naphthol-6-sulfonic acid: 630, 589 in H_2SO_4 (196).

o-Tolueneazo-*o*-tolueneazo- β -naphthol-8-sulfonic acid: 620, 580 in H_2SO_4 (196).

$C_{24}H_{20}N_4O_6S$.—*m*-Sulfobenzeneazo-*p*-methylanisoleazo- α -naphthol: Na salt, 506 in H_2O ; 503 in 0.02N HCl; 592 in 0.02N NaOH; 530 in 85% EtOH; 587 in 80% HCOOH (436).

m-Sulfobenzeneazo-*p*-methylanisoleazo- β -naphthol: Na salt, 506 in H_2O ; 502 in 0.02N HCl; 497 in 0.02N NaOH; (566), 540 in 85% EtOH; 661, 597 in 80% HCOOH (436).

p-Sulfobenzeneazo-*p*-methylanisoleazo- α -naphthol: Na salt, 513 in H_2O ; 512 in 0.02N HCl; 596 in 0.02N NaOH; 530 in 85% EtOH; 631, 586 in 80% HCOOH (436).

p-Sulfobenzeneazo-*p*-methylanisoleazo- β -naphthol: Na salt, 515 in H_2O ; 511 in 0.02N HCl; 507 in 0.02N NaOH; (566), 545 in 85% EtOH; 633, 610 in 80% HCOOH (436).

$C_{24}H_{20}N_4O_7S_2$.—*o*-Tolueneazo-*o*-tolueneazo- α -naphthol-4, 8-disulfonic acid: 630, 575 in H_2SO_4 (196).

o-Tolueneazo-*o*-tolueneazo- β -naphthol-3, 6-disulfonic acid: 635, 580 in H_2SO_4 (196).

p-Sulfo-*o*-tolueneazo-*o*-tolueneazo- α -naphthol-4-sulfonic acid: 647, 589 in H_2SO_4 (196).

p-Sulfo-*o*-tolueneazo-*o*-tolueneazo- β -naphthol-6-sulfonic acid: 650, 589 in H_2SO_4 (196).

p-Sulfo-*o*-tolueneazo-*o*-tolueneazo- β -naphthol-8-sulfonic acid: 630, 585 in H_2SO_4 (196).

o-Tolueneazo-*o*-tolueneazo- β -naphthol-6,8-disulfonic acid: 675, 580 in H_2SO_4 (196).

$C_{24}H_{20}N_4O_8S_2$.—*m*-Sulfobenzeneazo-*p*-methylanisoleazo- α -naphthol-4-sulfonic acid: Na salt, 591, 531 in H_2O ; 604, 524 in 0.02N HCl; 555 in 0.02N NaOH; 583, 538 in 85% EtOH; 675, 585, 542 in 80% HCOOH (436).

p-Sulfobenzeneazo-*p*-methylanisoleazo- α -naphthol-4-sulfonic acid: Na salt, 594, 533 in H_2O ; 601, 525 in 0.02N HCl; 586, 549 in 0.02N NaOH; 586, 549 in 85% EtOH; 676, 588, 547 in 80% HCOOH (436).

m-Sulfobenzeneazo-*p*-methylanisoleazo- α -naphthol-5-sulfonic acid: Na salt, 608, 545 in H_2O ; 616, 537 in 0.02N HCl; 587, 546 in 85% EtOH; 556 in 0.02N NaOH; 674, 602, 554 in 80% HCOOH (436).

p-Sulfobenzeneazo-*p*-methylanisoleazo- α -naphthol-5-sulfonic acid: Na salt, 604, 546 in H_2O ; 612, 538 in 0.02N HCl; 598, 560 in 0.02N NaOH; 585, 546 in 85% EtOH; 677, 606, (553) in 80% HCOOH (436).

m-Sulfobenzeneazo-*p*-methylanisoleazo- α -naphthol-7-sulfonic acid: Na salt, 522 in H_2O ; 518 in 0.02N HCl; 576 in 0.02N NaOH; 523 in 85% EtOH; 629, 586 in 80% HCOOH (436).

p-Sulfo-*p*-tolueneazo-*p*-methylanisoleazo-7-sulfo- α -naphthaleneazo-6-amino- α -naphthol-4-sulfonic acid: Na salt, 581 in H₂O (569 with alkali, 580 with acid) (436).

C₃₂H₂₄N₆O₆S₂.—Diphenyldisazo-*bis*- α -naphthylamine-4-sulfonic acid (Na salt, Congo Red, C. I. 370): 497, 319 in alk. EtOH; 577, (320) in dil. H₂SO₄ (215); cf. (468, 525); 500 on cotton (627); influence of concn. (269); quant. data (162q).

C₃₂H₂₄N₆O₇S₂.—Diphenyldisazo-4-sulfo- α -naphthylamine-7-amino- α -naphthol-3-sulfonic acid (Na salt): Pontamine Bordeaux B, metallic salts in H₂O; Na, 510, Ba, 505, Cr, 480, Al, 480 (677).

C₃₂H₂₄N₆O₈S₂.—Diphenyldisazo-*bis*-7-amino- α -naphthol-3-sulfonic acid (Na salt, C. I. 394): Pontamine Violet N, 520 in H₂O (concd.); 525 (dil.) (269); 545 in EtOH (266); Ba salt, 510 in H₂O (677). Erie Violet 3R identical with above when heated. When dissolved in cold—640, 585 in H₂O (545 in EtOH) (269); cf. (266); Ba salt, 635, 590 in H₂O (677).

C₃₂H₂₄N₆O₁₄S₄.—Diphenyldisazo-*bis*-8-amino- α -naphthol-3, 6-disulfonic acid (Na salt, C. I. 406): Pontamine Blue BBF, metallic salts in H₂O; Na, Ba, 580, Cu, 590, Al, 570, Cr, 595 (677).

C₃₂H₂₇N₅O₉S₂.—4-Sulfo-2-methylbenzeneazo-*p*-methylanisoleazo-6-benzoylamino- α -naphthol-3-sulfonic acid: Na salt, 641, (598), 530 in H₂O; 638, 522 in 0.02N HCl; (630), 542 in 0.02N NaOH; 571, 542 in 85% EtOH (436).

$C_{32}H_{27}N_9$.—Benzeneazobenzeneazobenzeneazobenzeneazodimethylaniline: 514 (111).

$C_{33}H_{25}N_5O_6S_2$.—*m*-Sulfobenzeneazo- α -naphthaleneazo-*p*-tolyl- α -naphthylamine-8-sulfonic acid (Na salt, C. I. 289): influence of neutral salts (635, 636); influence of concn. (269).

$C_{33}H_{25}N_5O_{15}S_4$.—3, 3'-Disulfodiphenylurea-4, 4'-disazo-*bis*-7-amino- α -naphthol-3-sulfonic acid (Na salt, C. I. 353): soln. and dyeing (22); influence of concn. (269).

$C_{34}H_{24}N_4O_{10}S_2$.—Phenolazodiphenylazo-8-amino-3, 6-disulfo- α -naphtholazo-*p*-nitrobenzene (Na salt, C. I. 593): Pontamine Green X (269).

$C_{34}H_{26}N_4O_2$.—Ditolyldisazo-*bis*- β -naphthol: 654.2, 606.1 in H_2SO_4 (190).

$C_{34}H_{26}N_4O_4$.—Dimethoxydiphenyldisazo-*bis*- β -naphthol (C. I. 499): 663.2, 614.2 in H_2SO_4 (190).

$C_{34}H_{26}N_4O_{10}S_2$.—Dimethoxydiphenyldisazo-*bis*- α -naphthol-4-sulfonic acid (Na salt, C. I. 502): Pontamine Blue AX, metallic salts in H_2O ; Na, 552, Cr, 550, Ba, 540, Al, Cu, 520 (677).

$C_{34}H_{27}N_5O_6S_2$.—7-Sulfo- α -naphthaleneazo-*p*-methylanisoleazo-6-phenylamino- α -naphthol-3-sulfonic acid: Na salt, 560 in H_2O ; 569 in 0.02*N* HCl; 550 in 0.02*N* NaOH (436).

$C_{34}H_{27}N_5O_{11}S_3$.—3, 6-Disulfo- α -naphthaleneazo-*p*-methylanisoleazo-6-phenylamino- α -naphthol-3-sulfonic acid: Na salt, (608), 556 in H_2O ; 554 in 0.02*N* HCl; 553 in 0.02*N* NaOH (436).

3, 6-Disulfo- β -naphthaleneazo-*p*-methylanisoleazo-6-phenylamino- α -naphthol-3-sulfonic acid: Na salt, 555 in H_2O ; 555 in 0.02*N* HCl; 558 in 0.02*N* NaOH; 582, 555 in 85% EtOH (436).

3, 6-Disulfo-8-amino- α -naphtholazoditolyazo- α -naphthol-4-sulfonic acid (Na salt, C. I. 472): Niagara Blue BR, 568 in H_2O at 23°; 567 at 49°; 565 at 76° (677).

$C_{34}H_{27}N_5O_{12}S_3$.—3, 7-Disulfo- β -naphtholazoethoxybenzidine-azo-7-amino- α -naphthol-3-sulfonic acid (Na salt, C. I. 492): 580 in H_2O (dissolved cold); 575 (dissolved hot); 565 in EtOH (266); cf. (269).

$C_{34}H_{27}N_5O_{14}S_4$.—3, 6, 8-Trisulfo- β -naphthaleneazo-*p*-methylanisoleazo-6-phenylamino- α -naphthol-3-sulfonic acid: Na salt, 562 in H_2O ; 561 in 0.02*N* HCl; 560 in 0.02*N* NaOH; 580, 556 in 85% EtOH (436).

$C_{34}H_{28}N_6O_6S_2$.—Ditolyldisazo-*bis*- α -naphthylamine-4-sulfonic acid (Na salt, C. I. 448): Erie Red 4B, 490 in H_2O (concd.); 498 (dil.); 505 in EtOH (269). Purpurine 4B (DuP.), 490 in H_2O (concd.), 496 (dil.), 510 in EtOH (677). Benzopurpurine 4B (By), on cotton, 505 (627). Diamine Red 4B, 512.5 on cotton (627).

Ditolyldisazo-*bis*- α -naphthylamine-5-sulfonic acid (Na salt, C. I. 449). Metallic salts of Benzopurpurine 6B in H_2O : Na, Cu, Al, 500; Cr, 505 (677).

$C_{34}H_{28}N_6O_9S_2$.—Ethoxydiphenyldisazo-*bis*-7-amino- α -naphthol-3-sulfonic acid (Na salt, C. I. 493): Diamine Black BO, dissolved with heat, 600 in H_2O (concd.); 580 (dil.); dissolved cold, 580 in H_2O (concd.); 570 (dil.); 570 in EtOH (266); cf. (269).

$C_{34}H_{28}N_6O_9S_3$.—Ditolyldisazo-3, 6-disulfo- β -naphthylamine- β -naphthylamine-6-sulfonic acid (Na salt, Vital Red, C. I. 456): 500 in H_2O (269).

$C_{34}H_{28}N_6O_{14}S_4$.—Ditolyldisazo-*bis*-8-amino- α -naphthol-3, 6-disulfonic acid (Na salt, Trypan Blue, C. I. 477): 585 in H_2O (485a); cf. (473).

$C_{34}H_{28}N_6O_{16}S_4$.—Dimethoxydiphenyldisazo-*bis*-8-amino- α -naphthol-3, 6-disulfonic acid (Na salt, C. I. 520): Pontamine Sky Blue 5BX, 595 in H_2O (concd.), 603 (dil.) (269). Metallic salts in H_2O : Na, 603, Al, 605, Cr, 610, Ba, 610, Cu, 580 (677).

Dimethoxydiphenyldisazo-*bis*-8-amino- α -naphthol-5, 7-disulfonic acid (Na salt, C. I. 518): Pontamine Sky Blue 6BX, lakes with Methylene Blue (265). Metallic salts in H_2O : Na, 620, Cu, 620, 670, Cr, 590, Ba, 618 (677).

$C_{35}H_{27}N_5O_{12}S_3$.—3, 6-Disulfo- β -naphthaleneazo-*p*-methylanisoleazo-6-benzoylamino- α -naphthol-3-sulfonic acid: Na salt (601),

535 in H_2O ; 516 in 0.02*N* HCl; 543 in 0.02*N* NaOH; 560 in 85% EtOH (436).

$C_{35}H_{27}N_5O_{15}S_4$.—3, 6, 8-Trisulfo- β -naphthaleneazo-*p*-methylanisoleazo-6-benzoylamino- α -naphthol-3-sulfonic acid: Na salt, (596), 540 in H_2O ; 535 in 0.02*N* HCl; 543 in 0.02*N* NaOH; 576, 538 in 85% EtOH (436).

$C_{38}H_{27}N_7O_{10}S_3$.—*p*-Sulfobenzeneazo-*o*-sulfobenzeneazo- α -naphthaleneazo-6-phenylamino- α -naphthol-3-sulfonic acid: Na salt, 593 in H_2O (580 with alkali, 621 with acid) (436).

$C_{38}H_{27}N_7O_{15}S_4$.—*p*-Sulfobenzeneazo-*o*-sulfobenzeneazo-7-sulfo- α -naphthaleneazo-6-phenylamino- α -naphthol-3-sulfonic acid: Na salt, 575 in H_2O (556 with alkali, 578 with acid) (436).

p-Sulfobenzeneazo-*o*-sulfobenzeneazo-7-sulfo- α -naphthaleneazo-6-phenylamino- α -naphthol-4-sulfonic acid: Na salt, 601 in H_2O (580 with alkali, 608 with acid) (436).

$C_{39}H_{29}N_7O_{10}S_3$.—*p*-Sulfobenzeneazo-*o*-sulfobenzeneazo- α -naphthaleneazo-6-*p*-tolylamino- α -naphthol-3-sulfonic acid: Na salt, 595 in H_2O (587 with alkali, 620 with acid) (436).

$C_{39}H_{29}N_7O_{15}S_4$.—*p*-Sulfobenzeneazo-*o*-sulfobenzeneazo-7-sulfo- α -naphthaleneazo-6-*p*-tolylamino- α -naphthol-3-sulfonic acid: Na salt, 578 in H_2O (560 with alkali, 579 with acid) (436).

p-Sulfobenzeneazo-*o*-sulfobenzeneazo-7-sulfo- α -naphthaleneazo-6-*p*-tolylamino- α -naphthol-4-sulfonic acid: Na salt, 603 in H_2O ; (576 with alkali, 604 with acid) (436).

$C_{46}H_{34}N_{10}O_{13}S_3$.—4-Sulfo- α -naphthaleneazo-3, 6-disulfo- α -naphthol-7-azo-*m*-toluylenediamineazodiphenylazosalicylic acid (Na salt, C. I. 561): Trisulfon Brown B (22).

Diazine Black D. R. Concd. (probably identical with Zambesi Black II): 560 in H_2O (concd.); 565 (dil.); 585 in EtOH (266, 269).

Diazo Dark Blue 3B: 560 in H_2O (concd.), 570 (dil.), 590 in EtOH (266, 269).

Pontachrome Yellow 3R: on wool (10).

Pontamine Copper Blue RRX (probably N. W. acid \rightarrow benzidine \rightarrow 2-amino-8-naphthol-5-sulfonic acid): 545 in H_2O (concd.); 555 (dil.) (269). Metallic salts in H_2O : Na, 555, Ba, 550, Al, 510, Cu, 530 (677).

TABLE 3.—TRIPHENYLMETHANE DERIVATIVES

$C_{19}H_{10}Br_4O_2$.—*m*-Tetrabromobenzaurin (subst. in phenol residues): 583 in alk. H_2O (461).

$C_{19}H_{13}BrO_2$.—*o*-Bromobenzaurin (subst. in benzene residue): 568 in alk. H_2O (461).

m-Bromobenzaurin (subst. in benzene residue): 565 in alk. H_2O (461).

p-Bromobenzaurin (subst. in benzene residue): 539 in alk. H_2O (461).

$C_{19}H_{13}BrN_2O_4$.—*p*-Bromo-*p*-dinitrotriphenylmethane: 274 in EtOH; Na salt, 513 in EtOH and C_6H_6 (221).

$C_{19}H_{13}N_3O_6$.—*p*-Trinitrotriphenylmethane: Na salt, 549 in EtOH (221).

$C_{19}H_{14}O$.—Fuchsone: 381, 262, 250 in EtOH; 462, 402, (289), 248 in concd. H_2SO_4 ; 472, 381, 283, 278, 270 in EtOH + HCl; 286, 250, in EtOH + KOH (491a); 379, (262) in $CHCl_3$ (219); (471 with excess $SnCl_4$ (438)); cf. (213, 218, 438, 442, 454, 470).

$C_{19}H_{14}O_2$.—Benzaurin: 435, 343, (284), 275 in EtOH; 504, 402, (284, 276, 266) in EtOH + HCl; 473, 410, (292, 285?), 256 in concd. H_2SO_4 ; 567, 379, 296, 250 in EtOH + KOH; 345, 296, 247 in 33% KOH (489a); cf. (155, 438, 442, 454, 461, 463, 491a).

$C_{19}H_{14}O_3$.—Aurin: 463, (385, 297, 276), 265 in EtOH; 476, (428, 333, 298, 289), 260 in concd. H_2SO_4 ; 482, (338, 309), 272, 266 in EtOH + HCl; 536, (500), 283 in EtOH + KOH; (364), 298, 248 in concd. aq. KOH (491a); cf. (57, 155, 174, 196, 231, 454, 461, 525).

$C_{19}H_{14}O_4$.—*o*-Dihydroxybenzaurin (subst. in phenol residues): 516 in alk. H_2O (467).

$C_{19}H_{14}O_5$.—*o*-Dihydroxyaurin: 545 in alk. H_2O (467).

$C_{19}H_{14}O_5S$.—*m*-Sulfobenzaurin (subst. in benzene residue): 560 in alk. H_2O (461).

p-Sulfobenzaurin (subst. in benzene residue): 568 in alk. H_2O ; 512 in acid H_2O (458).

m-Sulfobenzaurin (subst. in phenol residue): 559 in alk. H_2O (461).

$C_{19}H_{14}O_6$.—*o*-Trihydroxyaurin (resaurin): 498 in alk. EtOH (174).

m-Trihydroxyaurin (catechaurin): 583.5 in dil. $NaHCO_3$ soln. (461).

o-Hydroxy-*m*-dihydroxyaurin: 610 in alk. EtOH (174).

$C_{19}H_{15}Cl_3N_3(OAc)$.—*o*-Trichloro-*p*-rosaniline acetate: 533 in H_2O (440).

$C_{19}H_{15}N$.—Fuchsonimine: 430 in acid H_2O (461); chloride, 435, 335, 258 in EtOH (440); cf. (463).

$C_{19}H_{15}NO$.—*p*-Aminofuchson: 558 in H_2O (461).

$C_{19}H_{15}NO_2$.—*p*-Nitrotriphenylmethane: Na salt, 429 in EtOH + C_6H_6 (221).

o-Aminobenzaurin: 565 in H_2O (461).

p-Aminobenzaurin (C. I. 726): 539.1, 486.4 in alk. EtOH; 530.3, 477.4 in alk. H_2O (155); 497 in acid H_2O (461).

$C_{19}H_{15}Cl$.—Triphenylcarbonium chloride: abs. of alkylmercapto derivs. (54q).

$C_{19}H_{15}N(ClO_4)$.—*p*-Aminotriphenylcarbinol anhydride perchlorate: 485, 420, 310 in HOAc (314).

$C_{19}H_{16}N_2O$.—*p*-Diaminofuchson (C. I. 726): 541 in H_2O (461).

$C_{19}H_{16}O$.—*p*-Hydroxytriphenylmethane: 278 in EtOH (442).

Triphenylcarbinol: 269, 265, 262, 259, 253, 248, 242 in EtOH (492q); 431, 404, (289, 262, 241) in concd. H_2SO_4 (491q); cf. (219, 314, 470). Ethyl ether (7q). Methoxy derivs. (389q).

$C_{19}H_{16}O_2$.—*p*-Dihydroxytriphenylmethane: 289, 280, 271, 264, 258 in EtOH (489); cf. (370, 490).

p-Hydroxytriphenylcarbinol: (8q).

$C_{19}H_{17}NCl$.—*p*-Aminotriphenylmethane chloride: 280 in EtOH (442).

$C_{19}H_{17}N_2Cl$.—*p*-Diaminotriphenylcarbinol anhydride chloride (Döbner's Violet): 561.6 in H_2O ; 577 in EtOH (155); 568, 399, 305 in EtOH (442). Diacid salt, 480 (314); cf. (465).

$C_{19}H_{17}N_3O_9S_3$.—Sulfonated *p*-rosaniline (Na salt) and its mono- and trimethyl isomers (162q). Commercial acid fuchsin: infra-red abs., 0.8, (2.0?), 2.8, (4.2?), (4.7?), (5.2?), 6.2, 7.4, 8.3, 9.2, 9.8, (10.2?), (10.7?) μ (296); ultra-violet band, 294 in H_2O (308 with NH_4OH) (352); on silk (627); on wool (522); cf. (269, 421q).

$C_{19}H_{18}N_3Cl$.—*p*-Rosaniline (C. I. 676): base, 555, 287 in EtOH (20); chloride, in H_2O , 540.3, 483.7 (155); in EtOH, 547, (490), 295 (314); in *N* HCl, 588, 405; in HCl, 476 (20); diacid salt, 585; triacid salt, 485 (314); in solid form (352); cyanide, 532, 290, 249 in EtOH (381); cf. (3, 162q, 269, 273q, 352, 461, 497, 509q).

With rosaniline (Fuchsin, C. I. 677): infra-red abs., 0.7, (1.7?), 2.8, (4.1?), (4.7?), 6.3, 7.5, 8.6, (9.6), 11.1 μ (296); (3.5, 6.5, 8.2 μ) (80); influence of concn. (269, 273); influence of temp. (57); cf. (286q, 334, 335); dyeings (522, 627); cf. (4, 114, 218, 299q, 508q).

$C_{20}H_{12}Br_4O_8$.—Tetrabromorosolic acid: 566.4 in alk. H_2O ; 576.9 in alk. EtOH (350); influence of temp. (57).

$C_{20}H_{16}O_3$.—*p*-Methoxybenzaurin: 551 in alk. H_2O (467).

$C_{20}H_{16}O_3$.—Rosolic acid: 543.3 in alk. H_2O ; 569.4 in alk. EtOH (350); cf. (497).

$C_{20}H_{17}OCl$.—*o*-Methoxytriphenylcarbonium chloride: 550 in HOAc-HCl mixture (54q).

p-Methoxytriphenylcarbonium chloride: 470 in HOAc-HCl mixture (54q).

$C_{20}H_{20}N_3(Cl)$.—Rosaniline chloride: infra-red abs., 0.9, (1.6?), (2.7?), 6.3, 7.2, 7.8, 9.0, (9.4), 10.1, (10.5?), (11.3?) μ (296); 544.5 in H_2O (155); ultra-violet band at 291 in EtOH (289 with NH_3) (352); cf. (3, 231q, 273q, 647q). Phenolate (275).

$C_{21}H_{18}N_2O_3$.—*p*-Nitro-*p*-dimethylaminofuchson: "apparently 610" (467).

$C_{21}H_{18}NO$.—*p*-Dimethylaminofuchson: 586 in alk. H_2O ; 515, (530, 500) in acid H_2O (461); 468 in H_2SO_4 (470).

$C_{21}H_{18}NO_4$.—4-Dimethylamino-3', 4', 3'', 4''-tetrahydroxytriphenylcarbinol anhydride: 700 in alk. soln.; 595 in $NaHCO_3$ soln.; 565 in acid soln. (473).

$C_{21}H_{18}O_2Cl$.—*o*-Dimethoxytriphenylcarbonium chloride: 577, 495 in HOAc-HCl mixture (54q).

p-Dimethoxytriphenylcarbonium chloride: 500 in HOAc-HCl mixture (54q).

$C_{21}H_{20}NCl$.—*p*-Dimethylaminotriphenylcarbinol anhydride chloride: 485, 330, (290), (260) in very dil. acid (218); cf. (54q, 314, 442, 461, 464).

$C_{21}H_{21}N_2(Cl)$.—*sym.*-Dimethyl-*p*-diaminotriphenylmethane anhydride chloride: 587 in H_2O (155).

$C_{21}H_{22}N_3(Cl)$.—*asym.*-Dimethyl-*p*-rosaniline chloride: 547, 493 in H_2O (575 with acid) (467).

$C_{22}H_{21}O_3(Cl)$.—*o*-Trimethoxytriphenylcarbonium chloride: 546 in HOAc-HCl mixture (54q).

p-Trimethoxytriphenylcarbonium chloride: 480 in HOAc-HCl mixture (54).

$C_{22}H_{23}N_3O_9S_3$.—Ethylrosaniline trisulfonic acid (Na salt, C. I. 693): Red Violet 5RS, influence of concn. (269).

$C_{22}H_{24}N_3(Cl)$.—*p*-Triamino-*o*-tritolylicarbinol anhydride chloride (New Fuchsin, C. I. 678): 548.5 in H_2O (155); 541 in H_2O (concd.), 544 (dil.) (269); ultra-violet band at 292 in EtOH (290 with NH_3) (352); cf. (162q, 273q).

$C_{23}H_{16}O$.—Benznaphthaurin: 568 in H_2SO_4 (454).

$C_{23}H_{24}ClN_2(Cl)$.—*o*-Chloromalachite green: 630.1 in H_2O (151).

$C_{23}H_{24}N_2O$.—Tetramethyl-*p*-diaminofuchson: 540, 286 in EtOH; 521, 283 in $CHCl_3$; 461, 278 in Et_2O (218).

$C_{23}H_{24}N_2O_3S$.—Tetramethyl-*p*-diaminotriphenylcarbinol-*o*-sulfonic acid anhydride: Na salt, 623.9 in H_2O (155).

$C_{23}H_{24}N_3O_2(Cl)$.—*o*-Nitromalachite green: 633.1 in EtOH (151).

m-Nitromalachite green: 635.7 in EtOH (151).

p-Nitromalachite green: 637 in EtOH (151); 642 in H_2O (467).

$C_{23}H_{25}N_2(Cl)$.—Malachite green (C. I. 657): infra-red abs., 0.7, 3.4, 4.3, (4.8?), 6.5, 7.4, 8.5, (9.2), (10.6), (10.9), 11.2 μ (296); 616, 430 in H_2O (271); (400, 305 (419q)); influence of acidity (218, 219, 271, 306, 314, 463); influence of temp. (286); cf. (3, 54q, 111, 155, 352, 465, 525).

sym.-Diethyl-*p*-diaminotriphenylmethane carbinol anhydride chloride: 589.8 in H_2O (155).

$C_{23}H_{25}N_2O(Cl)$.—*o*-Hydroxymalachite green: 620.7 in H_2O (605.8, 560.3 with alkali); 617.7 in EtOH (155); cf. (111, 467).

m-Hydroxymalachite green: 617.4 in H_2O ; 618 in EtOH (155); cf. (111).

p-Hydroxymalachite green: 602.5 in H_2O (568.7, 518.6 with KOH); 599.5 in EtOH (558.5, 515.2 with KOH) (155); cf. (111, 174, 463).

$C_{23}H_{25}N_2O_2Cl$.—2, 4-Dihydroxymalachite green: 601 (acetate in EtOH + 1 mol HCl (111)).

3, 4-Dihydroxymalachite green: 603, 505 in acid EtOH (174).

$C_{23}H_{26}N_2O_3(Cl)$.—2, 3, 4-Trihydroxymalachite green: 612, 500 in acid EtOH (174); cf. (111).

$C_{23}H_{26}N_3(Cl)$.—*o*-Aminomalachite green: 616.2 in EtOH; 618.9 in H_2O ; 635.4 in dil. HCl (155); cf. (539).

m-Aminomalachite green: 614.7 in EtOH; 615.9 in H_2O ; 627.1 in dil. HCl (155); cf. (539).

$C_{28}H_{26}N_3(Cl)$.—*p*-Aminomalachite green: 576.2, 532.1 in AmOH; 578, 529.4 in EtOH; 586.3, 513.6 in H₂O; 623.9 in dil. HCl (155); 420 in HCl (467); cf. (152, 539).

$C_{24}H_{26}N_2O_3S$.—Tetramethyl-*p*-diaminodiphenyl-*m*-tolylcarbinol-*o*-sulfonic acid anhydride: Na salt, 622.3 in H₂O (155).

$C_{24}H_{27}ClN_3(Ac)$.—2-Chloro-3-amino-5-methylmalachite green: 614.5 in H₂O (541).

2-Chloro-4-amino-5-methylmalachite green: 617.5 in H₂O (541).

3-Chloro-2-amino-5-methylmalachite green: 594.6 in H₂O (541).

4-Chloro-2-amino-5-methylmalachite green: 613.4 in H₂O (541).

4-Chloro-3-amino-6-methylmalachite green: 620.4 in H₂O (541).

5-Chloro-3-amino-2-methylmalachite green: 617.6 in H₂O (541).

5-Chloro-3-amino-6-methylmalachite green: 632.2 in H₂O (541).

5-Chloro-4-amino-2-methylmalachite green: 611.5 in H₂O (541).

$C_{24}H_{27}N_2Cl$.—*o*-Methylmalachite green: 618 in H₂O; 619.5 in EtOH (155).

p-Methylmalachite green: 611.1 in H₂O, 614.7 in EtOH (155).

$C_{24}H_{27}N_2O(Cl)$.—*o*-Methyl-*p*-hydroxymalachite green: 617 in slightly acid H₂O; 587 in alk. H₂O (461).

o-Methoxymalachite green: 602.1 in H₂O; 601.1 in EtOH (155).

p-Methoxymalachite green: 603 in H₂O; 603.6 in EtOH (155); 613, 465, 290 in dil. acid (218); cf. (111, 467).

$C_{24}H_{27}N_4O_2(Ac)$.—2-Nitro-3-amino-5-methylmalachite green: 661.4 in H₂O (541).

2-Nitro-3-amino-6-methylmalachite green: 617.5 in H₂O (541).

3-Nitro-2-amino-5-methylmalachite green: 595.4 in H₂O (541).

5-Nitro-4-amino-2-methylmalachite green: 602.1 in H₂O (541).

$C_{24}H_{28}N_3(Cl)$.—Pentamethyl-*p*-rosaniline: 583.3, 529.5 in H₂O; 583.3, 538.5 in EtOH (155).

Commercial Methyl Violet: infra-red abs., 2.9, (4.4), 6.4, 7.2, 8.4, (9.1?), (9.4), 10.6 μ (somewhat different data with Paris Violet) (296); 540 in H₂O (concd.), 580 (dil.) (269); ultra-violet bands at 302, 247 in EtOH (260 with NH₃) (352); dyeings (170, 627); cf. (3, 162q, 274q, 419q).

Gentian Violet (274q); cf. (3, 114).

$C_{24}H_{28}N_3(Cl)$.—2-Amino-5-methylmalachite green: 618.5 in H₂O; 635.3 in dil. HNO₃; 618.1 in EtOH (539).

3-Amino-2-methylmalachite green: 619.8 in H₂O; 619.2 in EtOH (155); cf. (539).

3-Amino-4-methylmalachite green: 612.3 in H₂O; 612.6 in EtOH (155); 624.1 in dil. HNO₃; 622.9 in acid EtOH (539).

3-Amino-6-methylmalachite green: 620.6 in H₂O; 631.4 in dil. HNO₃; 619.1 in EtOH (630.1 with HNO₃) (539).

4-Amino-2-methylmalachite green: 601 in H₂O; 590.4, 536.6 in EtOH (155); influence of acidity (539).

4-Amino-3-methylmalachite green: 582.7, 512.8 in H₂O; 578, 529.9 in EtOH (155); 620.4 in dil. HNO₃ (539).

$C_{24}H_{28}N_3O_3S(Ac)$.—2-Sulfo-4-amino-5-methylmalachite green: 617.2 in H₂O (541).

4-Sulfo-2-amino-5-methylmalachite green: 590.8 in H₂O (541).

5-Sulfo-3-amino-2-methylmalachite green: 632.5 in H₂O (541).

5-Sulfo-3-amino-6-methylmalachite green: 632.2 in H₂O (541).

$C_{26}H_{24}N_3O_2(OAc)$.—Tetramethyl-*p*-diaminodiphenylisatinyl carbinol acetate: 599.1, 498.4 in H₂O (540).

$C_{26}H_{28}N_3O_7S_2$.—2, 4-Disulfo-5-hydroxydiethyl-*p*-diaminophenyliditolyl carbinol anhydride, Na salt (C. I. 715): Cyanole Extra, 612.5 in H₂O (606.3 with alkali); 611.3 in EtOH (267q). Cyanole FF, 622 on silk (627).

$C_{25}H_{29}N_3O(Cl)$.—*o*-Ethoxymalachite green: 606.7 in H₂O; 603.3 in EtOH (155).

p-Ethoxymalachite green: 605.3 in H₂O; 605.8 in EtOH (155).

$C_{25}H_{30}N_3(Cl)$.—Hexamethyl-*p*-rosaniline (Crystal Violet, C. I. 681): 590.5, 539.5 in H₂O; 591.1, 544.5 in EtOH (155); ultra-

violet bands at 305, 249 in EtOH (260 with NH₃) (352); diacid salt, 626 (2% H₂SO₄); triacid salt 490–495 (HCl) (314); triacid salt, 440, (312), 261 (H₂SO₄) (219); influence of concn. (269); dyeings (522, 627); lake with paper stock (265); in solid form, 540 (269); dye base, 590 in EtOH; 588 in Me₂CO; 490–495 in C₆H₆ (677); pseudo-base, 262 in EtOH (213); resorcinol addition product (278); cyanide, 268 in EtOH (381); cf. (2q, 54q, 111, 114q, 162q, 218, 274q, 276, 299q, 461, 463, 465, 518q).

$C_{26}H_{26}N_3O_2(OAc)$.—Tetramethyl-*p*-diaminodiphenyl-*o*-methylisatinylcarbinol acetate: 594.3, 503.7 in H₂O (540).

Tetramethyl-*p*-diaminodiphenyl-*p*-methylisatinylcarbinol acetate: 626.2 in H₂O (540).

$C_{26}H_{31}N_2(Cl)$.—*p*-Isopropylmalachite green: 614, 440 in H₂O; 462 in dil. H₂SO₄ (271).

$C_{26}H_{32}N_3(Cl)$.—*m*-Dimethylamino-*o*-methylmalachite green: 618.9 in H₂O; 620.7 in EtOH (155).

m-Dimethylamino-*p*-methylmalachite green: 614.4 in H₂O; 615.6 in EtOH (155).

p-Dimethylamino-*o*-methylmalachite green: 589.2, 545.5 in H₂O; 598.8, 551.5 in EtOH (155).

p-Dimethylamino-*m*-methylmalachite green: 589.3, 534.8 in H₂O; 590.6, 542.5 in EtOH (155).

Triethylosaniline (Hofmann's Violet, C. I. 679): 540 in H₂O (concd.); 585 (dil.) (269); cf. (231).

$C_{26}H_{33}ClN_3(Cl)$.—Heptamethyl-*p*-rosaniline (Methyl Green, C. I. 684): infra-red abs., 0.7, (2.0?), 3.0, 3.9, (4.5?), (5.1?), (5.5?), 6.3, 7.4, 8.8, 10.3 μ (296); cf. (3, 162q, 269, 511).

$C_{27}H_{32}N_3O_6S_2$.—Tetramethyltriaminodiphenyl- α -naphthylcarbinoldisulfonic acid anhydride, Na salt (C. I. 733): Intensive Blue, 612, (540) in H₂O (concd.); 615 (dil.) (269).

$C_{27}H_{32}N_2O_6S_2$.—Tetraethyldiaminotriphenylcarbinol-2, 4-disulfonic acid anhydride, Na salt (C. I. 672): Xylene Blue VS, 640 in H₂O; 632.5 in EtOH (267q).

Tetraethyldiaminotriphenylcarbinol-2, 5-disulfonic acid anhydride: Na salt, Alphazurine 2G, 640 in H₂O; 631.3 in EtOH (267q).

$C_{27}H_{32}N_2O_7S_2$.—2,4-Disulfo-5-hydroxytetraethyldiaminotriphenylcarbinol anhydride, Ca salt (C. I. 712): Patent Blue V, 637.5 in H₂O (627.5 with alkali); 630 in EtOH (267q); ultra-violet bands, 390, 305 (419); 410, 308 in EtOH (352); dyeings (522).

$C_{27}H_{32}N_2O_3S$.—*o*-Sulfotetraethyldiaminotriphenylcarbinol anhydride: Na salt, 630.8 in H₂O (155).

$C_{27}H_{33}N_3(Cl)$.—Tetraethyl-*p*-diaminotriphenylcarbinol anhydride chloride (Brilliant Green, C. I. 662): infra-red abs., 0.7, 1.3, (5.2), 6.4, 7.1, 7.5, (8.5), 9.0, 9.8, 10.8, 11.3 μ (296); 623 in H₂O (155); influence of concn. (269); influence of temp. (426); dyeings (522, 627); solid dye (546); ultra-violet bands at 429, 313 in EtOH (352).

$C_{27}H_{33}N_2O(Cl)$.—*m*-Hydroxybrilliant green: 623.6 in H₂O (155).

$C_{27}H_{34}N_3(Cl)$.—*o*-Dimethyl crystal violet: 605 in H₂O; 605, 560.3 in EtOH; 605.8, 562.5 in AmOH (155).

Tetraethyl-*p*-rosaniline: 591.4, 517.7 in H₂O; 582.5, 533 in EtOH; 580.7, 535.7 in AmOH (155).

$C_{29}H_{21}(Cl)$.—Phenyldiphenyl-naphthylchloromethane: 595, 495 in HOAc-H₂SO₄ mixture; 620, 495 in C₆H₅OH (98).

$C_{29}H_{23}NO_2$.—*p*-Dimethylamino-*p*-dihydroxyphenyldinaphthylcarbinol anhydride: 730 in H₂O (492 with acid) (467).

$C_{29}H_{25}N_4(OAc)$.—*p*-Azobenzenemalachite green: 572 in EtOH + 1 mol HCl (111).

$C_{29}H_{25}N_4O(OAc)$.—*m*-Azobenzene-*o*-hydroxymalachite green: 557 in EtOH + 1 mol HCl (111).

p-Azophenolmalachite green: 556 in EtOH + 1 mol HCl (111).

m-Azophenolmalachite green: 565 in EtOH + 1 mol HCl (111).

$C_{29}H_{25}N_4O_2(OAc)$.—*p*-Azoresorcinolmalachite green: 565 in EtOH + 1 mol HCl (111).

m-Azophenol-*o*-hydroxymalachite green: 565 in EtOH + 1 mol HCl (111).

$C_{29}H_{29}N_4O_3(OAc)$.—*p*-Azopyrogallolmalachite green: 567 in EtOH + 1 mol HCl (111).

$C_{29}H_{30}N_3(Cl)$.—*p*-Phenylaminomalachite green: 594, 538.5 in H₂O; 594, 549.5 in EtOH; 594, 552.6 in AmOH (31); cf. (152).

$C_{29}H_{32}N_3(Cl)$.—Tetramethylethyltriaminodiphenyl- α -naphthylcarbinol chloride (Victoria Blue R, C. I. 728): 565 in H₂O (concd.); 605 (dil.) (269).

$C_{30}H_{28}N_3(Cl)$.—Acridylmalachite green: 642 in H₂O (523).

$C_{30}H_{31}N_4O(OAc)$.—*p*-Azoanisolemalachite green: 561 in EtOH + 1 mol HCl (111).

$C_{30}H_{32}N_3(Cl)$.—*p*-Benzylaminomalachite green: 583.3, 526.7 in H₂O; 583.3, 537.5 in EtOH; 583.5, 540.5 in AmOH (155); cf. (152).

$C_{31}H_{33}N_3O_9S_3$.—Benzylpentamethyltriaminotriphenylcarbinol-trisulfonic acid anhydride (Na salt, Acid Violet 4BN, C. I. 695): 550 in H₂O (concd.); 590 (dil.) (269).

$C_{31}H_{34}N_3(Cl)$.—Benzylpentamethyl-*p*-rosaniline (Benzyl Violet, C. I. 683): 587, 535.7 in H₂O (152); cf. (274q).

$C_{31}H_{34}N_5(OAc)$.—*p*-Azodimethylanilinomalachite green: 557 in EtOH + 1 mol HCl (111).

$C_{31}H_{42}N_3(Cl)$.—Hexaethyl-*p*-rosaniline (Ethyl Violet, C. I. 682): 596.1, 545.5 in H₂O; 596, 550.5 in EtOH; 596.6, 552.6 in AmOH (155); influence of concn. (269, 274q).

$C_{32}H_{28}N_3(Cl)$.—Diphenylrosaniline and homologs (C. I. 689): Aniline Blue 2B (511q, 528q).

$C_{32}H_{29}N_3O_4S$.—Diphenyltriaminodiphenyltolylcarbinolsulfonic acid (Na salt, with triphenyl isomer, Alkali Blue, C. I. 704): (334q).

$C_{32}H_{36}N_3O_{10}S_3$.—Tetramethyl-*p*-tolyltriaminoethoxytriphenylcarbinoltrisulfonic acid anhydride (Na salt, C. I. 717): Pontacyl Violet 6BN, 540, 620 in H₂O (concd.); 620 (dil.); 610 in EtOH (269). Acid Violet 6BN (B), dyeings (522).

$C_{32}H_{36}N_3(Cl)$.—Tetramethylethylbenzyl-*p*-rosaniline: 585.7, 535.7 in H₂O (152).

$C_{33}H_{32}N_3(Cl)$.—Tetramethylphenyltriaminodiphenyl- α -naphthyl carbinol anhydride chloride (Victoria Blue B, C. I. 729): 618.8, (567) in H₂O (155); 565 in H₂O (concd.); 615 (dil.) (269). Base, 605 in EtOH; 482 in C₆H₆ (677).

$C_{34}H_{34}N_3(Cl)$.—Pentamethyl- α -naphthyl-*p*-rosaniline (Victoria Blue 4R, C. I. 690): 545 in H₂O (concd.); 590 (dil.) (269); cf. (3).

$C_{34}H_{39}N_3O_5S$.—Methyltetraethylphenyltriaminotriphenylcarbinolsulfonic acid anhydride (C. I. 700): Alkali Violet R, 540 in H₂O (concd.); 590 (dil.) (269).

$C_{35}H_{33}N_6O(OAc)$.—*p*-Azobenzeneazophenolmalachite green: 558 in EtOH + 1 mol HCl (111).

m-Azobenzeneazophenolmalachite green: 578 in EtOH + 1 mol HCl (111).

$C_{35}H_{34}N_6O$.—*p*, *p'*-Disazodimethylanilinetriphenylcarbinol: 505 in concd. HCl (111).

$C_{35}H_{34}N_6O_2$.—*p*-Hydroxy-*p'*, *p''*-disazodimethylanilinetriphenylcarbinol: 514 in concd. HCl (111).

$C_{36}H_{38}N_7(OAc)$.—*p*-Azobenzeneazodimethylanilinomalachite green: 558 in EtOH + 1 mol HCl (111).

$C_{37}H_{29}N_8O_5S_2$.—Triphenyltriaminotriphenylcarbinoldisulfonic acid anhydride (Na salt, C. I. 705): Soluble Blue (DuP.), 550 in H₂O (concd.); 560 (dil.) (269).

$C_{37}H_{29}N_3O_9S_3$.—Triphenyltriaminotriphenylcarbinoltrisulfonic acid anhydride (Na salt, C. I. 706): Methyl Blue, ultra-violet band at (380) in H₂O (301 with NH₃) (352).

$C_{37}H_{30}N_3(Cl)$.—Triphenyl-*p*-triaminotriphenylcarbinol anhydride chloride: 594.8 in EtOH (155); 594.8 in H₂O (151).

$C_{37}H_{31}N_3O_4S$.—Triphenyltriaminotriphenylcarbinolsulfonic acid anhydride (Na salt, C. I. 703): Methyl Alkali Blue (M. L. B.), 585 in H₂O (concd.); 590 (dil.) (269); Alkali Blue (305) in H₂O (300 with NH₃) (352).

$C_{37}H_{36}N_2O_5S_2$.—Dibenzyl-diethyldiaminotriphenylcarbinol-2, 4-disulfonic acid anhydride (Na salt, C. I. 673): 637.5 in H₂O; 630 in EtOH (267q).

Dibenzyl-diethyldiaminotriphenylcarbinol-2, 5-disulfonic acid anhydride: Na salt, 637.5 in H₂O; 630 in EtOH (267q).

Dibenzyl-diethyldiaminotriphenylcarbinoldisulfonic acid anhydride (Na salt, Guinea Green, C. I. 666): infra-red abs., 0.7, 3.1, 5.2, 6.4, 7.2, 7.5, (8.2), 9.0, 9.8, 10.8, 11.3 μ (296); dyeings (522); cf. (211q).

$C_{37}H_{36}N_2O_7S_2$.—2, 4-Disulfo-5-hydroxydibenzyl-diethyldiaminotriphenylcarbinol anhydride (Ca salt, Patent Blue A, C. I. 714): 637.5 in H₂O; (627.5 in alk.); 630 in EtOH (267q).

$C_{37}H_{36}N_2O_5S_3$.—Dibenzyl-diethyldiaminotriphenylcarbinol-*p*, *p'*, *o''*-trisulfonic acid anhydride (NH₄ salt, Alphazurine FG, C. I. 671): 630 in H₂O; 628.8 in EtOH (267q).

Dibenzyl-diethyldiaminotriphenylcarbinol-*p*, *p'*, *p''*-trisulfonic acid anhydride (Na salt, C. I. 670): 634, 425, 317 in H₂O (179q); 433, 313 in EtOH (311, 264 with NH₃) (352); dyeings (522, 590); cf. (419q, 422q, 519q).

$C_{37}H_{36}N_2O_{10}S_3$.—Fast Green FCF (*p*-hydroxyerioglaucine A): disodium salt, 628 in H₂O; trisodium salt, 611; indicator application (283q).

$C_{37}H_{37}N_3O_5S_2$.—Tetramethyl-*p*-diaminodibenzyl-*m*-aminotriphenylcarbinoldisulfonic acid anhydride (Na salt, C. I. 691): Fast Green extra, 628, 590 in H₂O (concd.); 622 (dil.); Fast Green CR and extra blue shade, 630 in concd. and dil. solns. (269).

$C_{37}H_{38}N_3(Cl)$.—Tetramethyldibenzyl-*p*-triaminotriphenylcarbinol anhydride chloride: 588, 532 in H₂O; 588.5, 542.5 in EtOH; 588.8, 544.5 in AmOH (152).

$C_{37}H_{39}N_7O$.—*p*-Dimethylamino-*p'*, *p''*-disazodimethylanilinetriphenylcarbinol: 516 in concd. HCl (111).

$C_{38}H_{33}N_3(Cl)$.—Triphenylrosaniline: 596.1 in EtOH (155); 597.4 in H₂O (151).

$C_{38}H_{42}N_3(Cl)$.—Tetraethyl-*p*-tolyltriaminodiphenyl- α -naphthylcarbinol anhydride chloride (Night Blue, C. I. 731): 570 in H₂O (concd.); 620 (dil.) (269).

$C_{40}H_{35}N_3O_5S_3$.—Trimethyltriphenyltriaminotriphenylcarbinol-trisulfonic acid anhydride (Na salt, C. I. 708): Hoechst New Blue, 311 in H₂O (306 with NH₃) (352).

$C_{41}H_{38}N_8$.—*p*-Azobenzene-*p'*, *p''*-disazodimethylanilinetriphenylmethane: 507 in concd. HCl (111).

$C_{41}H_{38}N_8O$.—*p*-Azophenol-*p'*, *p''*-disazodimethylanilinetriphenylmethane: 507 in concd. HCl (111).

$C_{41}H_{46}N_3O_5S_2$.—Dibenzyltetraethyltriaminotriphenylcarbinol-disulfonic acid anhydride (Na salt, C. I. 698): Pontacyl Violet C4B, 540 in H₂O (concd.); 590 (dil.) (269); cf. (276); Formyl Violet S4B, 599.8 on silk (627).

$C_{43}H_{43}N_9$.—*p*-Trisazodimethylanilinetriphenylmethane: 507 in concd. HCl (111).

$C_{46}H_{48}N_4(OAc)_2$.—Dimalachite green (diacetate): 622 (111).

Miscellaneous: Acid Violet, 300 in H₂O (309 with NH₃) (251); Acid Violet 4B extra (By), 530 in H₂O (concd.); 575 (dil.) (269); Acid Violet 6B, 535 in H₂O (concd.); 570 (dil.) (269); cf. (419); Alkali Blue 6B (By), 590 in H₂O (concd.); 580 (dil.) (269); Bavarian Blue DSF, 580 in H₂O (concd.); 595 (dil.) (269); Corallin, 460 in EtOH (concd.); 480 (dil.) (269); cf. (299q); Cotton Blue 6B extra, 311 in EtOH (294 with NH₃) (352); Guinea Violet 4B, dyeings (522); Iodine Green (231); Methyl Blue, infra-red abs., 0.7, 3.3, 5.2, 6.5, 7.3, 8.7, 9.5, 10.2, 10.4, (10.8), 11.4 μ (296); Neptune Green, infra-red abs. (296); New Patent Blue, 625 in H₂O; 617.5 in EtOH (26q); New Patent Blue 4B, 615 in H₂O, 608.8 in EtOH

(267q); Pontacyl Blue R, 575 in H_2O (concd.), 620 (dil.) (269); Pure Blue, 595 on cotton, 600, 580 on silk (522); Water Blue, influence of concn. (299); Water Blue 6B, 305 (419q).

TABLE 4.—PHTHALEINS AND SULFONPHTHALEINS

See also Table 5 for other so-called phthalains

$\text{C}_{19}\text{H}_{10}\text{Br}_2\text{Cl}_2\text{O}_6\text{S}$.—Dibromodichlorophenolsulfonphthalein ("Brom chlor phenol blue"): 596 in alk. soln. (81q); cf. (433q).

$\text{C}_{19}\text{H}_{10}\text{Br}_4\text{O}_6\text{S}$.—2, 3, 6, 7-Tetrabromophenolsulfonphthalein ("Brom phenol blue"): 593 in alk. soln. (81q); 440 in acid soln. (613q); cf. (58, 433q, 465).

$\text{C}_{19}\text{H}_{12}\text{Br}_2\text{O}_6\text{S}$.—Dibromophenolsulfonphthalein ("Brom phenol red"): 574 in alk. soln. (81q); cf. (433q).

$\text{C}_{19}\text{H}_{12}\text{Cl}_2\text{O}_6\text{S}$.—Dichlorophenolsulfonphthalein ("Chlor phenol red"): 573 in alk. soln. (81q); cf. (433q).

$\text{C}_{19}\text{H}_{14}\text{O}_6\text{S}$.—Phenolsulfonphthalein ("Phenol red"): 559 in alk. H_2O ; 507 in acid H_2O , 435 in "mid-form" (270); 433, (318), 265 in H_2O ; 509, (429, 396, 320, 284), 270 in abs. EtOH; 500, 376, (327), 265 in concd. H_2SO_4 ; 562, 360, 288 in alk. H_2O (178q); cf. (45, 58, 66q, 271, 288q, 433q, 455, 461, 465).

$\text{C}_{19}\text{H}_{14}\text{O}_7\text{S}$.—Catecholsulfonphthalein: 600 in NaHCO_3 soln.; 557 in dil. HCl (461).

$\text{C}_{20}\text{H}_{14}\text{Cl}_{10}\text{O}_4$.—1, 2, 3, 4, 5, 6, 7, 8, 4', 5'-Dekachlorophenolphthalein: 642 in alk. H_2O (462).

$\text{C}_{20}\text{H}_6\text{Br}_4\text{Cl}_4\text{O}_4$.—2, 3, 6, 7-Tetrabromo-3', 4', 5', 6'-tetrachlorophenolphthalein: 610, 377, 304 in alk. H_2O ; 615, 306 in alk. EtOH (288q); cf. (45q, 287).

$\text{C}_{20}\text{H}_6\text{Br}_8\text{O}_4$.—2, 3, 6, 7, 3', 4', 5', 6'-Octabromophenolphthalein: 608 in alk. H_2O ; 577 in H_2SO_4 (454).

$\text{C}_{20}\text{H}_6\text{Cl}_4\text{I}_4\text{O}_4$.—3', 4', 5', 6'-Tetrachloro-2, 3, 6, 7-tetraiodophenolphthalein: 621, 389, 308.5 in alk. H_2O ; 625, 308 in alk. EtOH (288q); cf. (45q, 287).

$\text{C}_{20}\text{H}_7\text{Br}_7\text{O}_4$.—2, 3, 6, 7, 3', 4' (?), 5'-Heptabromophenolphthalein: 609 in alk. H_2O (462).

$\text{C}_{20}\text{H}_5\text{Br}_9\text{O}_4$.—2, 3, 4 (?), 6, 7, 5' (?)-Hexabromophenolphthalein: 605 in alk. H_2O (462).

2, 3, 6, 7, 3', 5'-Hexabromophenolphthalein: 602 in alk. H_2O (462).

2, 3, 6, 7, 3', 6'-Hexabromophenolphthalein: 606 in alk. H_2O (462).

2, 3, 6, 7, 4', 5' (?)-Hexabromophenolphthalein: 592 in alk. H_2O (462).

$\text{C}_{20}\text{H}_5\text{Br}_4\text{IO}_4$.—2, 3, 6, 7-Tetrabromo-4-iodophenolphthalein: 600 in alk. H_2O (462).

$\text{C}_{20}\text{H}_5\text{Br}_4\text{NO}_6$.—2, 3, 6, 7-Tetrabromo-3'-nitrophenolphthalein: 597 in alk. H_2O (467).

2, 3, 6, 7-Tetrabromo-5'-nitrophenolphthalein: 599 in alk. H_2O (467).

$\text{C}_{20}\text{H}_5\text{Br}_5\text{O}_4$.—2, 3, 4, 6, 7-Pentabromophenolphthalein: 602 in alk. H_2O (462).

2, 3, 6, 7, 3'-Pentabromophenolphthalein: 597 in alk. H_2O (462).

2, 3, 6, 7 (4' or 5')-Pentabromophenolphthalein: 592 in alk. H_2O (462).

$\text{C}_{20}\text{H}_6\text{I}_6\text{O}_4$.—Pentaoidophenolphthalein ("probably two isomers"): 596 in alk. H_2O (462).

$\text{C}_{20}\text{H}_{10}\text{Br}_4\text{O}_4$.—2, 3, 6, 7-Tetrabromophenolphthalein: 580, 392, 305 in alk. H_2O ; 588, 311.5 in alk. EtOH (288q); 529 in H_2SO_4 (454); cf. (45q, 287, 441, 445, 460, 638q).

3', 4', 5', 6'-Tetrabromophenolphthalein: 583 in alk. H_2O (462); 501 in H_2SO_4 (454).

$\text{C}_{20}\text{H}_{10}\text{Cl}_4\text{O}_4$.—Tetrachloro-*o*, *p*-phenolphthalein: 576 (473).

2, 3, 6, 7-Tetrachlorophenolphthalein: 581.5, 303 in alk. H_2O ; 590, 309 in alk. EtOH; 530 in H_2SO_4 (460); cf. (45q, 638q).

3', 4', 5', 6'-Tetrachlorophenolphthalein: 303, 281, 272, 250 in abs. EtOH (178); 575, 362, 278 in alk. H_2O ; 583, 364, 280 in alk. EtOH (288q); cf. (45q, 287, 467, 638q).

$\text{C}_{20}\text{H}_{10}\text{I}_4\text{O}_4$.—2, 3, 6, 7-Tetraiodophenolphthalein: 593.5, 400, 312.5 in alk. H_2O ; 597, 313 in alk. EtOH (288q); cf. (45q, 287, 454, 458).

$\text{C}_{20}\text{H}_{11}\text{Br}_3\text{O}_4$.—2, 3, 6-Tribromophenolphthalein: 577 in alk. H_2O (462); cf. (638q).

3' (4' or 5'), 6'-Tribromophenolphthalein: 576 in alk. H_2O (462).

$\text{C}_{20}\text{H}_{12}\text{Br}_2\text{O}_3$.—2, 3-Dibromophenolphenyolphthalein: 568 in alk. H_2O (454).

$\text{C}_{20}\text{H}_{12}\text{Br}_2\text{O}_4$.—2, 3-Dibromophenolphthalein: 570 in alk. H_2O (462); 506 in H_2SO_4 (460).

3, 6-Dibromophenolphthalein: 569 in alk. H_2O (462); cf. (638q).

3', 5'-Dibromophenolphthalein: 571 in alk. H_2O (462).

3', 6'-Dibromophenolphthalein: 573 in alk. H_2O (462).

$\text{C}_{20}\text{H}_{12}\text{Br}_2\text{O}_6$.—3, 6-Dibromocatecholphthalein: 720, 489 in alk. H_2O (454).

$\text{C}_{20}\text{H}_{12}\text{Cl}_2\text{O}_4$.—2, 3-Dichlorophenolphthalein: 569 in alk. H_2O 505 in H_2SO_4 (460).

2, 7-Dichlorophenolphthalein: 570 in alk. H_2O (460).

4, 5-Dichlorophenolphthalein: 597 in alk. H_2O (454).

$\text{C}_{20}\text{H}_{12}\text{N}_2\text{O}_8$.—3', 5'-Dinitrophenolphthalein: 582 (473).

$\text{C}_{20}\text{H}_{13}\text{BrO}_4$.—Phenol-*p*-bromophenolphthalein: 559 in alk. H_2O (476).

3-Bromophenolphthalein: 561.5 in alk. H_2O (462).

4-Bromophenolphthalein: 567 in alk. H_2O (462).

3'-Bromophenolphthalein: 566 in alk. H_2O (462).

4'-Bromophenolphthalein: 556 in alk. H_2O (462).

5'-Bromophenolphthalein: 561 in alk. H_2O (462).

$\text{C}_{20}\text{H}_{13}\text{ClO}_4$.—1-Chlorophenolphthalein: 564 in alk. H_2O (462).

2-Chlorophenolphthalein: 560 in alk. H_2O ; 502 in H_2SO_4 (460).

3'-Chlorophenolphthalein: 563 in alk. H_2O (462).

$\text{C}_{20}\text{H}_{13}\text{IO}_4$.—1-Iodophenolphthalein: 568.5 in alk. H_2O (462).

$\text{C}_{20}\text{H}_{13}\text{NO}_6$.—3'-Nitrophenolphthalein: 570 in alk. H_2O (467).

4'-Nitrophenolphthalein: 542 (473).

5'-Nitrophenolphthalein: 570 (473); cf. (467).

m-Nitro-*o*, *p*'-phenolphthalein: 588 in alk. H_2O (456).

$\text{C}_{20}\text{H}_{13}\text{O}_4$.—"Bridged phenolphthalein" (in 4, 5 positions): 555 (111).

$\text{C}_{20}\text{H}_{14}\text{O}_2$.—Diphenylphthalide: (283, 276, 269, 259, 253) in EtOH; 446, (408), 305, 253 in concd. H_2SO_4 (490q).

$\text{C}_{20}\text{H}_{14}\text{O}_3$.—Phenylphenolphthalein (*p*-hydroxydiphenylphthalide): 395 in alk. H_2O (464); 262 in EtOH; 470 in H_2SO_4 (442); cf. (470).

$\text{C}_{20}\text{H}_{14}\text{O}_4$.—Isophenolphthalein (*o*, *p*'-phenolphthalein): 285, 277 in EtOH; (500), 449, (426), (286), (260) in H_2SO_4 ; 294, 243 in 33% KOH soln.; 590, 410 in alk. EtOH (487); 552 in alk. soln. (475); cf. (490).

Phenolphthalein: 284, 277 in EtOH; 494, 391, (324, 281, 260) in concd. H_2SO_4 ; 560, (367, 294), 253 in EtOH + KOH; 296, 248 in 33% aq. KOH (490); 552.5, 369, 286 in alk. H_2O ; 562, 364 in alk. EtOH (288q); 570 in alk. Me_2CO (501); cf. (13, 45, 58, 111, 156, 178, 195, 197, 262q, 287, 433q, 439q, 441, 442, 444q, 445, 454, 458, 461, 487, 583q, 638q).

Phenolisophthalein: 560 in alk. H_2O (461).

$C_{20}H_{14}O_4$.—Phenoltterephthalein: 550 in alk. H_2O (461); *cf.* (462).

Resorcinolphenylphthalein: 498 in H_2SO_4 (454).

$C_{20}H_{14}O_5$.—3'-Hydroxyphenolphthalein: 556 in H_2O with NaOH; 562 with $NaHCO_3$ (467).

4'-Hydroxyphenolphthalein: 542 in alk. H_2O ; 481 in H_2SO_4 (454).

Phenolpyrocatecholphthalein: 579 in alk. H_2O ; 552 in H_2SO_4 (455); *cf.* (550).

Phenolhydroquinolphthalein (*p*-Hydroxyisophenolphthalein): 498 in alk. H_2O (Moir?).

$C_{20}H_{14}O_6$.—3', 6'-Dihydroxyphenolphthalein: 549 in H_2O with NaOH; 563 with $NaHCO_3$ (467).

4', 5'-Dihydroxyphenolphthalein: 558 in H_2O with NaOH; 568 with $NaHCO_3$ (467).

Pyrocatecholphthalein: alkali salt, 635 in H_2O ; 600 in dil. NaOH soln.; 543.5 in H_2SO_4 (156); *cf.* (197, 454, 550).

$C_{20}H_{14}O_{10}S_2$.—2, 7-Disulfophenolphthalein: 577 in alk. H_2O (454).

$C_{20}H_{15}NO_3$.—Phenolanilinephthalein: 558 in alk. H_2O (455).

$C_{20}H_{15}NO_4$.—*o*-Amino-*o*, *p*'-phenolphthalein: 570 in alk. H_2O (473); (value given in (456) is erroneous).

$C_{20}H_{16}N_2O_4$.—*o*-Diaminophenolphthalein: 630 in alk. H_2O (454); (value of 610 given in (172) for "diaminophenolphthalein").

$C_{21}H_{12}Cl_4O_4$.—Tetrachloro-*o*, *p*'-phenol-*m*-cresolphthalein: 590 (473).

$C_{21}H_{14}Br_2O_4$.—2, 3-Dibromo-6-methylphenolphthalein: 573 in alk. H_2O ; 511 in H_2SO_4 (460).

2, 3-Dibromo-8-methylphenolphthalein: 584 in alk. H_2O ; 521 in H_2SO_4 (460).

$C_{21}H_{14}Br_2O_5S$.—2, 3, 6, 7-Tetrabromo-*m*-cresolsulfonphthalein ("Bromocresol Green"): 614 in alk. H_2O ; 619 in alk. EtOH (281q); *cf.* (81q, 433).

$C_{21}H_{14}Cl_4O_5S$.—2, 3, 6, 7-Tetrachloro-*m*-cresolsulfonphthalein ("Chlorocresol Green"): 612 in alk. soln. (81q).

$C_{21}H_{14}O_5$.—Phenyl-*o*-hydroxybenzoic acid-phthalein (hydroxydiphenylphthalide-*o*-carboxylic acid): 420 in weakly alk. H_2O (464); 471 in H_2SO_4 (470).

Phenyl-*p*-hydroxybenzoic acid-phthalein: 486 in alk. H_2O (457).

$C_{21}H_{14}O_6$.—Phenolphthalein-*o*-carboxylic acid: 561 in H_2O with NH_3 ; 567 with NaOH (456).

Isophenolphthalein-*m*-carboxylic acid: 562 in very weak alkali; 570 in strong alkali; 502 in H_2SO_4 (456).

$C_{21}H_{15}BrO_4$.—Phenolbromo-*o*-cresolphthalein: 570 in alk. H_2O (476).

Phenolbromo-*p*-cresolphthalein: 569 in alk. H_2O (476).

$C_{21}H_{15}IO_4$.—2-Iodo-3-methylphenolphthalein: 576 in alk. H_2O (473).

Phenol-6-iodo-*o*-cresolphthalein: 576 in alk. H_2O (476).

$C_{21}H_{16}Br_2O_5S$.—Dibromo-*o*-cresolsulfonphthalein ("Bromocresol Purple"): 591 in alk. H_2O (58q); *cf.* (66q). Ultra-violet abs. (21).

$C_{21}H_{16}O_3$.—Phenyl-*o*-cresolphthalein: 564 in alk. H_2O (454).

Phenyl-*m*-cresolphthalein: 506 in H_2SO_4 (457).

$C_{21}H_{16}O_4$.—Phenol-*o*-cresolphthalein: 562 in alk. H_2O (476); *cf.* (455).

Phenol-*m*-cresolphthalein: 569 in alk. H_2O ; 526 in H_2SO_4 (457); *cf.* (476).

Phenol-*p*-cresolphthalein: 563 in alk. H_2O (476); 572 in alk. H_2O ; 487 in H_2SO_4 (456).

Phenolphthalein methyl ether: 555 in alk. H_2O ; 503 in H_2SO_4 (457).

Phenolphthalein methyl ester: 560 in alk. H_2O (567 in strong alkali); 523 in H_2SO_4 (458); *cf.* (439).

$C_{21}H_{16}O_5$.—Phenolguaiacolphthalein: 580 in alk. H_2O ; 525 in H_2SO_4 (455).

5'-Methoxyphenolphthalein: 565 in alk. H_2O (467).

$C_{21}H_{17}NO_3$.—Phenolmethylanilinephthalein: 576 in alk. H_2O (455).

m-Methylaminoisophenolphthalein: 640 in alk. H_2O (456).

$C_{21}H_{18}O_5S$.—*o*-Cresolsulfonphthalein ("Cresol Red"): 437, (318), 287 in H_2O ; 525, (426), 406, (320), 276 in abs. EtOH; 509, 381, (284), 265 in concd. H_2SO_4 ; 573, 367, 294 in alk. aq. soln. (178); *cf.* (58q, 66q, 433q).

m-Cresolsulfonphthalein ("Metacresol Purple"): 580 in alk. soln.; 533 in acid soln. (81q).

$C_{21}H_{18}O_7S$.—Guaiacolsulfonphthalein: 608 in alk. H_2O ; 565 in *N* HCl; 570 in H_2SO_4 (455).

$C_{22}H_{14}Br_4O_4$.—Tetrabromophenolphthalein ethyl ester (638q).

$C_{22}H_{14}Cl_4O_4$.—*o*-Cresol-3', 4', 5', 6'-tetrachlorophthalein: 305, 282, 275, 253 in abs. EtOH (178).

$C_{22}H_{14}O_8$.—*o*-Dicarboxyphenolphthalein: 559 in alk. H_2O (454).

m-Dicarboxyphenolphthalein: 559 in alk. H_2O (454).

$C_{22}H_{14}O_{10}$.—Protocatechuicphthalein: 612 in alk. H_2O (454).

$C_{22}H_{16}Br_2O_4$.—*o*-Dibromo-*o*-cresolphthalein: 578 in alk. H_2O ; 530.5 in H_2SO_4 (454).

$C_{22}H_{16}Br_2O_6$.—Dibromoguaiacolphthalein: 673 in alk. H_2O (454).

$C_{22}H_{16}O_6$.—*p*-Carboxyisophenolphthalein methyl ether: 558 in alk. H_2O ; 503 in H_2SO_4 (456).

$C_{22}H_{18}O_4$.—*o*-Cresolphthalein: 569.5 in alk. H_2O ; 577 in alk. EtOH (156); 587 in AmOH (458); 284, 277 in abs. EtOH; 508, 386, (322), 282, (267), 234 in concd. H_2SO_4 (178); *cf.* (195, 197, 454, 476).

m-Cresolphthalein: 576 in alk. H_2O ; 583 in alk. EtOH (156); *cf.* (197, 457, 476).

Phenolphthalein dimethyl ether: 518 in H_2SO_4 ; 521 in $CHCl_3$ + $SnCl_2$ (314); *cf.* (457).

Phenol-*asym.*-*o*-xylenolphthalein: 578 in alk. H_2O (476).

Phenol-*adj.*-*o*-xylenolphthalein: 575 in alk. H_2O (476).

Phenol-4-hydroxy-*o*-xylenephthalein: 573 in alk. H_2O (473).

Phenol-*adj.*-*m*-xylenolphthalein: 570 in alk. H_2O (476).

Phenol-*asym.*-*m*-xylenolphthalein: 573 in alk. H_2O (476); *cf.* (473).

Phenol-*sym.*-*m*-xylenolphthalein: 572 in alk. H_2O (476).

Phenol-*p*-xylenolphthalein: 574 in alk. H_2O (476); *cf.* (473).

$C_{22}H_{18}O_5$.—Phenolhydroquinolphthalein ethyl ether: 552, (490) in alk. H_2O (457).

$C_{22}H_{18}O_6$.—Guaiacolphthalein: 597 in alk. H_2O ; 602 in alk. EtOH (156); *cf.* (197, 454).

3', 6'-Dimethoxyphenolphthalein: 568 in alk. H_2O (467)

4', 5'-Dimethoxyphenolphthalein: 556 in alk. H_2O (467).

5', 6'-Dimethoxyphenolphthalein: 571 in alk. H_2O (467).

$C_{22}H_{19}NO_2$.—Phenyldimethylanilinephthalein: 480 in alk. H_2O (464).

$C_{22}H_{19}NO_3$.—Phenoldimethylanilinephthalein: 587.5 in alk. H_2O (455); 430 in H_2SO_4 (470).

$C_{22}H_{20}O_6S$.—Hydroxyisopropylphenolsulfonphthalein: 598 in alk. H_2O ; 507 in acid H_2O (271).

$C_{23}H_{14}O_5$.—Phenolcoumarinphthalein: 565 in alk. H_2O (455).

$C_{23}H_{16}NO_7S$.—Phenolquinosolphthalein: 598 in alk. H_2O ; 520 in H_2SO_4 (455).

$C_{23}H_{20}O_4$.—Phenolpseudocumenolphthalein: 581 in alk. H_2O (476).

$C_{23}H_{22}O_5S$.—Phenolsulfonphthalein diethyl ether: (509, 402, 310, 282, 275, 268) in EtOH (178).

$C_{23}H_{24}N_2O_3S$.—*bis*-Dimethylanilinesulfonphthalein: 593 in H_2O ; 634 in acid H_2O (461).

$C_{24}H_{12}Cl_4O_4$.—Tetrachloro-*o*, *p*-phenol- α -naphtholphthalein: 630 (473).

$C_{24}H_{16}O_3$.—Phenyl- α -naphtholphthalein: (454, 467).

$C_{24}H_{16}O_4$.—*p*, *o*'-Phenol- α -naphtholphthalein: 612 in alk. H_2O (476); *cf.* (455).

$C_{24}H_{16}O_4$.—*p*, *p'*-Phenol- α -naphtholphthalein: 601 in NH_4OH soln.; 587 in concd. H_2SO_4 (473); *cf.* (476).

Phenol- β -naphtholphthalein: 570 in alk. H_2O (476); *cf.* (467).

$C_{24}H_{16}O_5$.—Resorcinol- α -naphtholphthalein: 468 in alk. H_2O (197).

$C_{24}H_{17}NO_3$.—Phenol- α -naphthylaminephthalein: 740 in alk. H_2O (455).

$C_{24}H_{18}Cl_4O_4$.—Tetrachloro-*o*, *p'*-phenolphthymolphthalein: 597 (473).

p-Xylenoltetrachlorophthalein: 625 (473).

$C_{24}H_{18}O_8$.—Methyl salicylate phthalein: 557 in alk. H_2O (454).

$C_{24}H_{20}O_4$.—Phenoltetrahydro- α -naphtholphthalein: 584 in alk. H_2O (476); 530 in H_2SO_4 (455).

$C_{24}H_{22}O_4$.—Phenolcarvacrolphthalein: 580 in alk. H_2O (455); *cf.* (476).

Phenolphthymolphthalein: 578 in alk. H_2O ; 520 in H_2SO_4 (455); *cf.* (476).

$C_{24}H_{22}O_4$.—*vic.-o*-Xylenolphthalein: 593 in alk. H_2O (476).

vic.-m-Xylenolphthalein: 581 in alk. H_2O (476).

p-Xylenolphthalein: 590 in alk. H_2O (476); *cf.* (473).

$C_{24}H_{22}O_6$.—3', 6'-Dimethoxy-*o*-cresolphthalein: 580 in alk. soln. (195).

3, 6'-Dimethoxy-*m*-cresolphthalein: 585 in alk. soln. (195).

$C_{24}H_{28}O_4$.—Phenolmentholphthalein: 563 in alk. H_2O (455).

$C_{26}H_{18}O_4$.— α -Naphtholmethyl ether phenolphthalein: 470 in alk. soln.; 572 in concd. H_2SO_4 (473).

$C_{26}H_{24}O_4$.—Thymol-*m*-cresolphthalein: 590 in alk. H_2O ; 530 in H_2SO_4 (457).

Thymol-*p*-cresolphthalein: 595 in alk. H_2O (457).

$C_{26}H_{26}O_5S$.—*o*-Cresolsulfonphthalein diethyl ether: 525, (394, 318), (284, 275, 269), 237 in EtOH (178).

$C_{26}H_{18}O_6$.—Phenolnaphthoxyacetic acid phthalein: 485 in slightly alk. soln.; 592 in concd. H_2SO_4 (473).

$C_{26}H_{19}NO_3$.—Phenoldiphenylaminephthalein: 565 in alk. H_2O (456).

$C_{26}H_{21}NO_3$.—Phenoldimethyl- α -naphthylaminephthalein: 625 in alk. soln. (467).

$C_{26}H_{26}O_4$.—*p*-Ethoxyphenolphthymolphthalein: 598 in alk. H_2O (457).

$C_{27}H_{18}O_5S$.— α -Naphtholsulfonphthalein: 730 in alk. H_2O ; 720, 500 in H_2SO_4 (455).

$C_{27}H_{28}Br_2O_5S$.—Dibromothymolsulfonphthalein ("Bromthymol Blue"): 617 in alk. H_2O (58q); ultra-violet abs. (21); *cf.* (66q, 433q).

$C_{27}H_{30}O_5S$.—Carvacrolsulfonphthalein: 593 in alk. H_2O , 603 in alk. EtOH (677).

Thymolsulfonphthalein ("Thymol Blue"): 596 in alk. H_2O ; 544 in acid H_2O (58q); 570 in H_2SO_4 (455); *cf.* (280q, 433q).

$C_{28}H_{14}Br_4O_4$.— α -Naphtholtetrabromophthalein: 678 in alk. H_2O ; 654 in H_2SO_4 (454).

$C_{28}H_{17}NO_6$.—3'-Nitro- α -naphtholphthalein: 730 in alk. H_2O (455).

$C_{28}H_{18}O_4$.—*o*, *o'*- α -Naphtholphthalein: 671 in alk. H_2O ; about 625 in concd. H_2SO_4 (473).

p, *p'*- α -Naphtholphthalein: 650 in alk. H_2O (476); *cf.* (156, 197, 454, 458, 66q).

Phenol- α -anthrophthalein: 628 in alk. H_2O ; 611 in H_2SO_4 (457).

Phenol- β -anthrophthalein: 730 in alk. H_2O (457).

$C_{28}H_{18}O_5$.—3'-Hydroxy- α -naphtholphthalein: 622 in alk. H_2O (454).

$C_{28}H_{24}O_4$.—Thymol- α -naphtholphthalein: 633 in alk. H_2O (457).

Thymol- β -naphtholphthalein: 700 in alk. H_2O (457).

$C_{28}H_{26}Br_4O_4$.—Thymoltetrabromophthalein: 623 in alk. H_2O ; 575 in H_2SO_4 (454).

$C_{28}H_{26}O_4$.—Tetrahydronaphtholphthalein: 602 in alk. H_2O (454).

$C_{28}H_{28}Br_2O_4$.—Dibromocarvacrolphthalein: 623 in alk. H_2O (454).

Dibromothymolphthalein: 625 in alk. H_2O (454).

$C_{28}H_{29}NO_6$.—3'-Nitrothymolphthalein: 602 in alk. H_2O (455).

$C_{28}H_{30}O_4$.—Carvacrolphthalein: 602 in alk. H_2O (156); 554 in H_2SO_4 (454); *cf.* (197, 476).

Thymolphthalein: 596.5 in alk. H_2O ; 603 in alk. EtOH (156); 548 in H_2SO_4 (454); ultra-violet band at 398 in alk. H_2O (458); *cf.* (58q, 197, 476).

$C_{32}H_{26}O_4$.—Thymol- α -anthrophthalein: "probably" 710 in alk. H_2O ; 636 in H_2SO_4 (457).

$C_{36}H_{22}O_4$.— α -Anthrophthalein: 740 in alk. H_2O ; 720 in H_2SO_4 (457).

TABLE 5.—XANTHENE DYES

$C_{13}H_8O_2$.—Xanthone: 333, 282 (also gives data on xanthene) (608); 405, 340 in H_2SO_4 (470).

$C_{13}H_8O_3$.—3-Hydroxyfluorone: 504 in EtOH + HCl (644).

$C_{13}H_8O_4$.—3, 6-Dihydroxyxanthone: 381 in EtOH + HCl (644).

$C_{13}H_{10}O_2$.—Xanthidrol: 450 in H_2O (470).

$C_{13}H_{10}O_4$.—3, 6-Dihydroxyxanthidrol: 479 in H_2O (465).

$(C_{16}H_{16}N_2O)_2SO_4$.—*sym.*-Dimethyldiaminoxanthenyl sulfate: 583 in EtOH (44q).

$C_{17}H_{18}N_2O_2$.—3, 6-Tetramethyldiaminoxanthone: 386.1 in EtOH + HCl (644).

$C_{17}H_{19}N_2O(Cl)$.—Tetramethyldiaminoxanthenyl chloride (Pyronine G, C. I. 739): 547.5, 505.6 in H_2O ; 547.9, 511.2 in EtOH; 548.3, 512.8 in AmOH (155); 507 in H_2O (concd.), 545 (dil.) (677); *cf.* (111, 465, 644). Cyanpyronine G; 663, 603, (280, 270) in EtOH (221).

$C_{19}H_8Br_4O_6S$.—Tetrabromoresorcinolsulfonphthalein: 527 in alk. H_2O (466).

$C_{19}H_9Br_4NO_6$.—2, 4, 5, 7-Tetrabromo-4'-nitroresorcinolbenzein: 527 in alk. H_2O (466).

$C_{19}H_{10}Br_2O_5S$.—Dibromosulfonfluorescein: (497.5), 462, (393, 307, 283, 269), 262, 241 in abs. EtOH; 450, (354, 340, 327, 304), 269, (261, 234) in concd. H_2SO_4 (177q). Diacetate: (497), 464, (447), 359, (303), 272, 265, 237 in abs. EtOH (177q).

$C_{19}H_{10}Br_4O_4$.—2, 4, 5, 7-Tetrabromoresorcinolbenzein: 519 in alk. H_2O (466).

$C_{19}H_{11}NO_5S$.—4'-Nitroresorcinolsulfonphthalein: 506 in alk. H_2O (466).

$C_{19}H_{12}O_5S$.—Sulfonfluorescein: (488), 446, (315, 300, 264, 252), 230 in abs. EtOH; 439, (333, 316, 291), 257, (252, 225) in concd. H_2SO_4 ; 502.5, (475, 379, 321, 293, 260), 243 in EtOH + KOH; diacetate, (482), 444, (411, 293), 259 in abs. EtOH; dichloride, 309, 299, 266 in abs. EtOH (177q); Moir reports bands at (522), 497 in alk. H_2O and at 576 in *N* HCl for resorcinolsulfonphthalein (455).

$C_{19}H_{12}O_6S$.—Hydroquinolsulfonphthalein: (510), 443, 366, 284, (242) in EtOH; (500), 432, 365, 280, (241) in H_2O ; (488), 403, 370, 274, (241) in concd. H_2SO_4 ; 542, 375, 315, 249 in EtOH + KOH; 461, 325, 250 in 33% aq. KOH; dibenzoate, (458), 388, (302), 269, 227 in EtOH (584q).

$C_{19}H_{14}BrO_4$.—3'-Bromoresorcinolbenzein: 497 in alk. H_2O (466).

4'-Bromoresorcinolbenzein: 493 in alk. H_2O (466).

6'-Bromoresorcinolbenzein: 505 in alk. H_2O (466).

$C_{19}H_{14}BrO_5$.—3'-Bromo-4'-hydroxyresorcinolbenzein: 490 in H_2O (550 with alkali) (466).

$C_{19}H_{14}NO_6S$.—Resorcinolsaccharein: "spectrum identical with fluorescein" (455).

$C_{19}H_{14}NO_6$.—4'-Nitroresorcinolbenzein: 500 in alk. H_2O (466).

$C_{19}H_{14}O_4$.—Resorcinolbenzein: 490, 459, (433, 370, 317, 312, 276, 270, 253) in EtOH; 446, (348, 295, 262, 251) in EtOH + HCl; 426, (370, 282), 256, 251 in concd. H_2SO_4 ; 505, (475, 379), 324, 292, (259), 242 in EtOH + KOH; 492, (384), 327, 285, (256), 239 in 5% aq. KOH (493q); 501 in alk. H_2O ; 442 in H_2SO_4 (454); 508 in EtOH (514, 478) with alkali (429).

$C_{19}H_{14}O_5$.—3'-Hydroxyresorcinolbenzein: 494 in H_2O (492 with alkali) (466).

4'-Hydroxyresorcinolbenzein: 484 in H_2O ; 492 in slightly alk. soln.; 544 with excess alkali (466).

6'-Hydroxyresorcinolbenzein: 492, 430 in H_2O (466).

$C_{19}H_{14}O_6$.—Hydroxyquinolbenzein: 500 in EtOH (523 with alkali) (429).

Pyrogallolbenzein: 496 in EtOH (535 with alkali) (429).

$C_{20}H_{10}O_8$.—Dekaiodo fluorescein: K salt, 549.5 in alk. H_2O ; 556.5 in alk. EtOH (272).

$C_{20}H_4Br_3Cl_4IO_5$.—4, 5, 7-Tribromo-3', 4', 5', 6'-tetrachloro-2-iodo fluorescein: 543 in alk. H_2O (466).

$C_{20}H_4Br_4Cl_4O_5$.—Tetrabromotetrachloro fluoran: 311 in EtOH (287).

$C_{20}H_4Br_4Cl_4O_5$.—2, 4, 5, 7-Tetrabromo-3', 4', 5', 6'-tetrachloro fluorescein (C. I. 778): K salt, 537.3, 498.5 in H_2O ; 549.9, 509.5 in EtOH; 474.5 in H_2SO_4 (155); ultra-violet band at 307 in H_2O (352); cf. (272, 287, 466, 637); also (?) (3, 162q, 299, 497, 642).

$C_{20}H_4Br_4I_4O_5$.—2, 4, 5, 7-Tetrabromo-3', 4', 5', 6'-tetraiodo fluorescein: 540 in alk. H_2O ; 551 in alk. EtOH (272).

3', 4', 5', 6'-Tetrabromo-2, 4, 5, 7-tetraiodo fluorescein: 548 in alk. H_2O ; 560 in alk. EtOH (637).

$C_{20}H_4Br_8O_5$.—Octabromo fluorescein: 539 in alk. H_2O ; 550 in alk. EtOH (272); 553 in 0.1% HOAc; 520 in solid form (677); cf. (456, 637).

$C_{20}H_4Cl_4I_4O_5$.—3', 4', 5', 6'-Tetrachloro-2, 4, 5, 7-tetraiodo fluorescein (C. I. 779): Na salt, 547.7, 507.3 in H_2O ; 558.1, 516.1 in EtOH; 490.5 in H_2SO_4 (155); 560 on wool (642); cf. (3, 162, 272, 466, 637).

$C_{20}H_4Cl_8O_5$.—Octachloro fluorescein: 537 in alk. H_2O (466).

$C_{20}H_4I_8O_5$.—Octaiodo fluorescein: 550 in alk. H_2O ; 558 in alk. EtOH (272).

$C_{20}H_4Br_4Cl_3O_5$.—2, 4, 5, 7-Tetrabromo-3', 4', 5'-trichloro fluorescein: 536 in alk. H_2O (466).

$C_{20}H_4Br_7O_5$.—2, 4, 5, 7, 3', 5', 6'-Heptabromo fluorescein: 540 in alk. H_2O (466).

$C_{20}H_4Br_4Cl_2O_5S_2$.—2, 4, 5, 7-Tetrabromo-3', 6'-dichlorothio fluorescein: 520.5 in H_2O + NH_3 ; 526.5 in EtOH + NH_3 (637).

$C_{20}H_4Br_4Cl_2O_5$.—2, 4, 5, 7-Tetrabromo-3', 5'-dichloro fluorescein: 538 in alk. H_2O (466).

2, 4, 5, 7-Tetrabromo-3', 6'-dichloro fluorescein (C. I. 774): K salt, 529.4, 492 in H_2O ; 541.1, 501.5 in EtOH; 466 in H_2SO_4 (155); 531.5 in alk. H_2O ; 546.5 in alk. EtOH (637); 545 on wool (642); ultra-violet band at 305 in H_2O (352); cf. (676q).

2, 4, 5, 7-Tetrabromo-4', 5'-dichloro fluorescein: 529 in alk. H_2O (466).

$C_{20}H_6Br_6O_5$.—2, 4, 5, 7, 3', 5'-Hexabromo fluorescein: 535 in alk. H_2O (466).

2, 4, 5, 7, 3', 6'-Hexabromo fluorescein: 539 in alk. H_2O (466); (538) (465).

$C_{20}H_6Cl_4I_4O_5S_2$.—2, 4, 5, 7-Tetraiodo-3', 6'-dichlorothio fluorescein: 560 in H_2O + NH_3 ; 565 in EtOH + NH_3 (637).

$C_{20}H_6Cl_4I_4O_5$.—2, 4, 5, 7-Tetraiodo-3', 6'-dichloro fluorescein (C. I. 777): Na salt, 538.1, 499.5 in H_2O ; 548.7, 508 in EtOH; 483 in H_2SO_4 (155); 540 in alk. H_2O ; 556.5 in alk. EtOH (637); ultra-violet band at 310 (352); infra-red abs., 8, (1.3), 3.5, 5.4, 6.4, 7.0, 7.6, 9.1, (9.9), 10.3, 11.0 μ (296); 560 on wool (642); cf. (388q, 390q, 391, 418q, 518q).

$C_{20}H_7Br_4NO_7$.—2, 4, 5, 7-Tetrabromo-3'-nitro fluorescein: 530 in alk. H_2O (466).

2, 4, 5, 7-Tetrabromo-5'-nitro fluorescein: 529 in alk. H_2O (466).

$C_{20}H_7Br_4O_5$.—2, 4, 5, 7, 3'-Pentabromo fluorescein: 529 in alk. H_2O (466).

2, 4, 5, 7, 5'-Pentabromo fluorescein: 526 in alk. H_2O (466).

$C_{20}H_7Cl_4IO_5$.—3', 4', 5', 6'-Tetrachloro-2-iodo fluorescein: 520 in alk. H_2O (466).

$C_{20}H_8Br_2N_2O_7$.—2, 7-Dibromo-4, 5-dinitro fluorescein: 522 in alk. H_2O (466).

4, 5-Dibromo-2, 7-dinitro fluorescein (C. I. 771): 535 on wool; 530 in gelatin (transmission); 541 (reflection) (642); 519 in H_2O ; 530 in solid form (677); cf. (162q, 497).

$C_{20}H_8Br_4O_5$.—2, 4, 5, 7-Tetrabromo fluorescein (Na salt, Eosin, C. I. 768): 516, 482.5 in H_2O ; 527.6, 489.2 in EtOH; 545 in H_2SO_4 (155); 523 in alk. EtOH (272); 285 in slightly acid EtOH (287); 510 on wool (642); 533 in 1% HOAc; 520 in solid form (677); infra-red abs., 0.7, 6.9, (8.4), 9.2, 10.2 μ (296); ultra-violet bands in H_2O at 344, 303 (352); cf. (335, 418); influence of temp., (57, 426); cf. (3, 114, 162q, 272, 299, 332, 390q, 391q, 445q, 447, 454, 497, 637).

3', 4', 5', 6'-Tetrabromo fluorescein: 510 in alk. H_2O ; 521 in alk. EtOH (272); 438.5 in H_2SO_4 (454); 515, 478 in solid form (677); cf. (466, 637).

$C_{20}H_8Cl_4O_5$.—3', 4', 5', 6'-Tetrachloro fluoran: 309, 295 in EtOH (286).

$C_{20}H_8Cl_4O_5$.—2, 4, 5, 7-Tetrachloro fluorescein: 518 in alk. H_2O (466); (519) (460).

3', 4', 5', 6'-Tetrachloro fluorescein: 509.5 in alk. H_2O ; 520 in alk. EtOH (272); ultra-violet abs. (287); cf. (466, 637).

$C_{20}H_8Cl_4O_7$.—3', 4', 5', 6'-Tetrachlorohydroxyhydroquinolphthalein: 577, 530 in alk. H_2O (466).

$C_{20}H_8I_4O_5$.—2, 4, 5, 7-Tetraiodo fluorescein (Na salt, Erythrosin, C. I. 773): 526, 351, 309, 260 in H_2O (179q); in EtOH, disodium salt, 531; monosodium salt, 541; dye acid, 490 (279); 467.5 in H_2SO_4 (155); 537.5 on wool (642); 542 on silk (627); cf. (10); influence of temp. (334q, 335q); infra-red abs. (0.9), 1.9, 3.1, 4.5, 6.4, 6.9, 7.4, 8.1, 9.5, 10.2, 10.8, (11.4) μ (296); cf. (114q, 272, 454, 628, 629, 637).

3', 4', 5', 6'-Tetraiodo fluorescein: 511 in alk. H_2O ; 522 in alk. EtOH (272); 532, 500 in solid form (677).

$C_{20}H_8N_4O_{13}$.—2, 4, 5, 7-Tetranitro fluorescein: 489 in H_2O ; 523.8 in EtOH (500.4 with alkali) (350).

$C_{20}H_8Br_3O_5$.—2, 4, 7-Tribromo fluorescein: 515 in alk. H_2O (466).

3', 5' (or 4'), 6'-Tribromo fluorescein: 511 in alk. H_2O (466).

$C_{20}H_8Cl_3O_5$.—3', 4', 5'-Trichloro fluorescein: 505 in alk. H_2O (466).

$C_{20}H_{10}Br_2O_5$.—2, 7-Dibromo fluorescein: 509 in alk. H_2O (466); 508 (460).

4, 5-Dibromo fluorescein: 505 in alk. H_2O ; 510 in alk. EtOH (272); 520, 490 in solid form (677); cf. (155, 637).

$C_{20}H_{10}Br_2O_5$.—3', 5'-Dibromofluorescein: 506 in alk. H_2O (466).
 3', 6'-Dibromofluorescein: 509 in alk. H_2O (466).
 $C_{20}H_{10}Cl_2O_3$.—4, 4'-Dichlorofluoran: 295, 284, 275, 265 in abs. EtOH (494q).
 $C_{20}H_{10}Cl_2O_3S_2$.—3', 6'-Dichlorothiofluorescein: 530, 503 in $H_2O + NH_3$ (637).
 $C_{20}H_{10}Cl_2O_5$.—3', 6'-Dichlorofluorescein: 505 in alk. H_2O ; 517.5 in alk. EtOH (637).
 $C_{20}H_{10}I_2O_5$.—4, 5-Diiodofluorescein (Na salt, C. I. 772): 507 in alk. H_2O ; 518 in alk. EtOH (637); 510.8 in H_2O (155).
 $C_{20}H_{10}N_2O_9$.—4, 5-Dinitrofluorescein: salts (497).
 $C_{20}H_{10}O_5S_2$.—Fluorescein disulfide: 509 in EtOH; 489.2 in alk. H_2O (395).
 $C_{20}H_{11}BrO_5$.—3'-Bromofluorescein: 501 in alk. H_2O (466).
 5'-Bromofluorescein: 499 in alk. H_2O (466).
 $C_{20}H_{11}NO_7$.—3'-Nitrofluorescein: 500 in alk. H_2O (466).
 5'-Nitrofluorescein: 498 in alk. H_2O (466).
 $C_{20}H_{12}O_3$.—Fluoran: 293, 284, 278, 262 in abs. EtOH; (468, 447, 427), 378, (362, 277), 259, (253) in concd. H_2SO_4 (494q); cf. (287, 442, 454, 470, 473).
 $C_{20}H_{12}O_3S_2$.—Thiofluorescein: 586 in alk. H_2O (172).
 $C_{20}H_{12}O_5$.—Fluorescein (Na salt, C. I. 766): 482, 455, (431, 374, 289, 283), 277 in EtOH; 443, (309, 298, 264, 249) in EtOH + HCl; 432, (329, 311, 290, 256), 250 in concd. H_2SO_4 (494q); Na salt, 489.3, 457.2 in H_2O ; 498.5, 465.7 in EtOH (155); 470 on wool (642); 500, 470 in solid form (677); influence of temp. (57); influence of pH (272); infra-red abs., 0.8, (1.3), 3.5, 5.4, 6.4, 7.0, 7.6, 9.1 (9.9), 10.3, 11.0 μ (296); cf. (3, 111, 114, 156, 287, 351q, 395, 418q, 429, 441, 444, 445, 447q, 454, 466, 470, 497, 603, 666q). Diacetate, 291, 282, 273, 262 in abs. EtOH (494q); *o*-toluidide, 533; *p*-toluidide, 557 (396); anilide, 555 (396).
 Hydroquinolphthalein: (517), 443, 363, 283, (245) in EtOH + HCl; (484), 396, 366, 271, (240) in concd. H_2SO_4 ; (526), 346, 261 in EtOH + KOH; 332, 247 in 33% aq. KOH (584q); 497.5 in H_2SO_4 (454); alkali salt: 494 in H_2O (466); 614, 506, 367 (441); 498 in alk. H_2O (454); 516.4, (502), 486.5, 456 in EtOH (156); cf. (287, 444q, 445). Dibenzoate: (299, 282, 272, 232) in EtOH (584q).
 $C_{20}H_{12}O_6$.—3'-Hydroxyfluorescein: 489 in H_2O (494 with alkali) (466); 420 in H_2SO_4 (454).
 4'- (or 5'-) Hydroxyfluorescein: 492 in H_2O (466).
o-Hydroxyfluorescein: 523, 498 (473, 550).
 $C_{20}H_{12}O_7$.—1, 8-Dihydroxyfluorescein (Phloroglucinolphthalein): 489 in H_2O (466); 460 in H_2O (156); 496 in alk. H_2O (197); 500 in alk. EtOH (463 with excess alkali) (156); 433 in H_2SO_4 (454).
 2, 7-Dihydroxyfluorescein (Hydroxyhydroquinolphthalein): 550, 527, 509 in alk. H_2O (466); 494.5, 462 in EtOH; 554.5, 503 in alk. EtOH; 580.5 with Zn salt (156); cf. (197, 429, 550).
 4, 5-Dihydroxyfluorescein (Gallein): 505 in slightly alk. H_2O ; 540 with excess alkali (156); 561.8 in dil. NaOH + NaSH (395); 495 in EtOH (505 with alkali) (429); 522.1 in EtOH with HCl and $SnCl_2$ (395); 461 in H_2SO_4 (454).
 3', 6'-Dihydroxyfluorescein: 493 (466).
 $C_{20}H_{12}O_8S_2$.—Thiogallein: 526.2 in EtOH with HCl and $SnCl_2$; 582.3 in EtOH with NaOH and NaSH (395).
 $C_{20}H_{15}N_2O_3(Cl)$.—Rhodamine chloride: 494, 461.4 in H_2O ; 500, 468 in EtOH (155).
 $C_{20}H_{16}O_5$.—4'-Methoxyresorcinolbenzein: 493 in alk. H_2O (466).
 6'-Methoxyresorcinolbenzein: 492, 430 in alk. H_2O (466).
 $C_{21}H_3Br_4Cl_2O_5$.—Phloxine methyl ester (K salt, C. I. 776): abs. in various solvents (3).
 $C_{21}H_{10}Br_4O_5$.—Eosin methyl ester (K salt, C. I. 769): in H_2O , 517 at 20°, 519 at 80°; in EtOH, 529.9 at 20°, 531.4 at 70°; in $CHCl_3$, 538.2 at 20°, 539.3 at 60° (664).
 $C_{21}H_{14}O_2$.— β , β -Dinaphthoxanthidrol: 508, 484 (473).

$C_{21}H_{14}O_6$.—3'-Methoxyfluorescein: 497 in alk. H_2O (466).
 4'- (or 5') Methoxyfluorescein: 492 in alk. H_2O (466).
 $C_{21}H_{18}O_2$.—*o*-Cresolbenzein: 437, (347, 285), 278 in EtOH; 515, 406, (297), 274 in EtOH + HCl; 581, 385, 300, (250) in EtOH + KOH; 488, 412, (297, 280), 261 in concd. H_2SO_4 ; 356, (296), 251 in concd. aq. KOH (495q).
 $C_{21}H_{27}N_2O(Cl)$.—Tetraethyldiaminoxanthenyl chloride (C. I. 741): 553.9, 514.4 in H_2O ; 553.7, 513.3 in EtOH; 553.7, 513.3 in AmOH (155).
 $C_{22}H_3Br_4Cl_4O_5$.—2, 4, 5, 7-Tetrabromo-3', 4', 5', 6'-tetrachloro- γ -orcinolphthalein: 555, (520) in alk. EtOH (486).
 $C_{22}H_{12}Br_4O_5$.—Eosin ethyl ester (K salt, C. I. 770): 536.7 at 20°, 538.4 at 70° in EtOH (57).
 2, 4, 5, 7-Tetrabromo- α -orcinolphthalein: 572 in alk. H_2O (486).
 2, 4, 5, 7-Tetrabromo- β -orcinolphthalein: 576 in alk. EtOH (486); 307 in EtOH (287).
 2, 4, 5, 7-Tetrabromo- γ -orcinolphthalein: 521 in alk. H_2O (466); 529 in alk. EtOH (486).
 $C_{22}H_{12}Cl_4O_5$.—3', 4', 5', 6'-Tetrachloro- α -orcinolphthalein: 562 in alk. H_2O (486).
 3', 4', 5', 6'-Tetrachloro- β -orcinolphthalein: 294 in EtOH (287); 554 in alk. EtOH (486).
 3', 4', 5', 6'-Tetrachloro- γ -orcinolphthalein: 511.5 in alk. H_2O (466); 521 in alk. EtOH (486).
 $C_{22}H_{13}Br_3O_5$.—Tribromo- β -orcinolphthalein: 463 in alk. H_2O (466).
 $C_{22}H_{14}Br_2O_5$.—4, 5-Dibromo-2, 7-dimethylfluorescein: 516 in alk. H_2O (466).
 $C_{22}H_{16}O_5$.—2, 7-Dimethylfluorescein (Cresorcin): 500 in alk. H_2O (466).
 α -Orcinolphthalein: 528 in alk. H_2O (486); cf. (197, 466).
 β -Orcinolphthalein: 536 in alk. H_2O (486); cf. (156); 440 (466); 281 (287); 546 in alk. EtOH (156).
 γ -Orcinolphthalein: 490.5, 453 in alk. H_2O (156); 500.5, 461 in alk. EtOH (156); cf. (466, 486).
 $C_{22}H_{16}O_7$.—3', 6'-Dimethoxyfluorescein: 499 in alk. H_2O (466).
 4', 5'-Dimethoxyfluorescein: 496 in alk. H_2O (466).
 $C_{22}H_{19}N_2O_3(Cl)$.—*asym.*-Dimethylrhodamine chloride: 524, 488.5 in H_2O ; 526.7, 489.2 in EtOH (519.5, 489.2 after standing) (155).
 $C_{23}H_{18}O_8$.—3', 4', 5'-Trimethoxyfluorescein: 499 in alk. H_2O (466).
 $C_{23}H_{20}NO_3(Cl)$.—Aporhodamine chloride: 530.7, 491.3, 459 in EtOH (155).
 $C_{23}H_{23}N_2O(Cl)$.—Tetramethylrosamine chloride: 548.7, 511.2 in H_2O ; 551.9, 515.1 in EtOH (155); 555, 393, 360 in EtOH (44).
 $C_{24}H_{20}O_5$.—Tetramethylfluoran: 480, 505 in concd. H_2SO_4 (476).
 $C_{24}H_{20}O_5$.—3', 6'-Dimethoxy-2, 7-dimethylfluoran: 585 in alk. soln. (195).
 $C_{24}H_{23}N_2O_3(Cl)$.—Tetramethylrhodamine chloride: 546.7, 509 in H_2O ; 539.5, 505.6 in EtOH (538.1, 501.6 after standing) (155).
sym.-Diethylrhodamine chloride: 519.3, 487 in H_2O ; 516.3, 483.7 in EtOH (155).
asym.-Diethylrhodamine chloride: 527.4, 490.5 in H_2O , 527.4, 490.5 in EtOH (523.6, 490 after standing) (155).
 $C_{24}H_{25}N_2O_3(Cl)$.—*asym.*-Diethylhomorhodamine chloride: 530.6, 496.2 in H_2O ; 527.3, 492.7 in EtOH (155).
asym.-Dimethylhomorhodamine chloride ethyl ester (C. I. 753): 533.7, 497.3 in H_2O ; 531.3, 494.8 in EtOH (155).
 $C_{24}H_{27}N_2O_3(Cl)$.—*sym.*-Diethylrhodamine chloride ethyl ester (C. I. 752): 521.9, 486.4 in H_2O ; 524.7, 489.2 in H_2SO_4 (155); influence of concn. (269); in various solvents (3); in solid form (548); 530 on wool (642).
 Triethylrhodamine chloride (C. I. 750): 353 in H_2O (352); 540 on wool (642).

$C_{27}H_{18}O_2$.—*C*-Phenyl- β , β -dinaphthoxanthidrol: 495, 470 (473).
 $C_{27}H_{18}NO_4$.—Tetraethylrosamine chloride: 563.5, 527.5 in H_2O (523).
 $C_{28}H_{10}Br_4O_7$.—2, 4, 5, 7-Tetrabromoanthraquinonefluorescein: NH_4 salt, 533 in H_2O ; 539, 500 in EtOH (649).
 $C_{28}H_{12}Br_2O_7$.—4, 5-Dibromoanthraquinonefluorescein: NH_4 salt, 519 in H_2O ; 525, 491 in EtOH (649).
 $C_{28}H_{14}O_7$.—Anthraquinonefluorescein: NH_4 salt, 506 in H_2O ; 512, 484 in H_2O (649).
 $C_{28}H_{16}O_8$.— α -Naphthofluoran: 500, 475 in H_2SO_4 (467); 496, 470 in H_2SO_4 (473).
 $C_{28}H_{16}O_6$.— α -Naphthofluorescein: 536.2, 496 in alk. H_2O ; 489.5, 525, 459.5 in EtOH (541.5, 501 with alkali) (156); cf. (466).
 $C_{28}H_{31}N_2O_3(Cl)$.—Tetraethylrhodamine chloride (Rhodamine B, C. I. 749): 552.6, 514.6 in H_2O ; 545.5, 509.6 in EtOH (543.5, 505.6 after standing) (155); infra-red abs., 0.8, (2.0), 3.0, 6.4, 7.3, 8.6, 8.9, (9.6), (11.0) μ (296); influence of concn. (269); dyeings (627, 642); cf. (3, 481, 519a, 666a, 676). Base: 545 in EtOH; 548 with band in the far violet in C_6H_6 (677).
 $C_{30}H_{35}N_2O_3(Cl)$.—Tetraethylrhodamine chloride ethyl ester (C. I. 751): 555.5, 516.3 in H_2O ; 551.9, 512.8 in EtOH (155); 560, 525 on wool (522).
 $C_{32}H_{23}N_2O_6S$.—Sulfodiphenyldiamino-*o*-carboxyphenylxanthenyl (Na salt, Violamine B, C. I. 757): 535 in H_2O (concd.); 545 (dil.) (269); 555 on wool (642).
 $C_{34}H_{16}O_{10}$.—Difluorescein: 495 (111).
 $C_{34}H_{25}N_2O_6S$.—Sulfodi-*o*-tolylldiamino-*o*-carboxyphenylxanthenyl (Na salt, Violamine R, C. I. 758): 361, 306 in H_2O (352); 540 on wool (642); influence of concn. (269).
 $C_{34}H_{34}N_2O(Cl)$.—Acridylpyronine B: 580, 534.8 in H_2O (523).
 $C_{34}H_{36}N_4O_2(Cl)_2$.—Dipyronine G: (668), 538 (111).
 $C_{36}H_{34}N_2O_6S$.—Sulfodimesityldiamino-*o*-carboxyphenylxanthenyl (Violamine G, C. I. 759): 522.5 in H_2O ; 535 on wool (642).

TABLE 6.—QUINOLINE DYES

NOTE.—The 2, 2'-linkage is denoted by the term "pseudocyanine." When employed without further qualification the term "carbocyanine" also implies the 2, 2'-linkage.

$C_{13}H_{15}N_2$.—Dimethylprotocyanine (1, 1'-dimethyl-2-pyridylmethane): 428, 405 in H_2O (472).
 $C_{17}H_{17}N_2$.—Dimethylmesocyanine: 495, 465, 430 in H_2O (472).
 $C_{17}H_{19}N_2S(I)$.—2, 1'-Diethylthio-(pseudo)-pyridocyanine iodide: two poorly defined bands between 460 and 400 (449).
 $C_{18}H_{11}NO_2$.—Quinoline yellow (C. I. 800): on wool (10); 440 in 50% EtOH; isopropyl deriv. and sulfonates (513).
 $C_{19}H_{14}N_2$.—Di-(quinolyl-2)-methane: base, 508, 479, 453 in EtOH (554).
 $C_{19}H_{17}N_2O_2(I)$.—2, 2'-Dimethyloxacarbo-cyanine iodide (Oxazole Yellow): 485, 456 in EtOH (346); (485, 460) (206).
 $C_{19}H_{17}N_2S(I)$.—1, 2'-Dimethylthiopseudocyanine iodide: 485, (460) (207).
 $C_{19}H_{17}N_2S_2(Br)$.—1, 1'-Dimethylthiocarbocyanine bromide (Thiazole Purple): 558, 526 in EtOH (346).
 $C_{19}H_{19}N_2S_2(I)$.—2, 2'-Diethylthiocyanine iodide: 423, 400 in EtOH (346); cf. (448).
 $C_{20}H_{16}N_2$.—*N*-Methylquinolylenequinaldine: base, 461 in EtOH (554).
 $C_{20}H_{18}N_3(I)$.—1, 1'-Dimethyl-2, 2'-azocyanine iodide: 424, 402, 285 in EtOH (205); 421, 396 in H_2O ; 375, 358 in concd. H_2SO_4 (472).
 $C_{20}H_{19}N_2S(I)$.—2-Methyl-1'-ethylthiopseudocyanine iodide: 485, (460) (207).
 1'-Methyl-2-ethylthiopseudocyanine iodide: 485, (460) (207).

$C_{20}H_{21}N_2(ClO_4)$.—*o*-Dimethylaminobenzylidenequinaldine methyl perchlorate: 455, 350 in EtOH (353 with HCl) (348).
 p -Dimethylaminobenzylidenequinaldine methyl perchlorate: 515, 338 in EtOH (350 with HCl) (348).
 p -Dimethylaminobenzylidenelepidine methyl perchlorate: 526, 293 in EtOH (348).
 $C_{20}H_{21}N_2S_2(I)$.—5 (or 5')-Methyl-2, 2'-diethylthiocyanine iodide: 427, 400 in EtOH (448).
 $C_{20}H_{22}N_3(I)$.— p -Dimethylaminoanil of quinaldine aldehyde ethiodide: 568 (205).
 $C_{21}H_{19}N_2(I)$.—1, 1'-Dimethylpseudocyanine iodide: 523, 488, 455 in EtOH; 317 with H_2SO_4 (340); cf. (150, 317).
 1, 1'-Dimethylisocyanine iodide: 558, 519 in EtOH (446); cf. (122, 202, 667); perchlorate, 545, 500, 286 in EtOH (317 with HCl) (348).
 $C_{21}H_{20}N_3(I)$.—5-Amino-1, 1'-dimethylisocyanine iodide: 555, 520 in EtOH (202).
 6-Amino-1, 1'-dimethylisocyanine iodide: 575, 535 in EtOH (202).
 7-Amino-1, 1'-dimethylisocyanine iodide: 570, 535 in EtOH (202).
 6'-Amino-1, 1'-dimethylisocyanine iodide: 570, 535 in EtOH (202).
 7'-Amino-1, 1'-dimethylisocyanine iodide: 545, 510 in EtOH (202).
 $C_{21}H_{21}N_2O_2(I)$.—2, 2'-Diethyloxacarbo-cyanine iodide: 485, 460 in EtOH (206).
 1', 6'-Dimethyl-2-ethylthioisocyanine iodide: 500, 487 in EtOH (56).
 2, 1'-Diethylthioisocyanine iodide: 503, 489 in EtOH (155).
 $C_{21}H_{21}N_2S(I)$.—2, 1'-Diethylthiopseudocyanine iodide: 493, 461 (449); 485, (460) (207).
 $C_{21}H_{21}N_2S_2(I)$.—2, 2'-Diethylcarbocyanine iodide: 559, 525 in EtOH (448).
 $C_{21}H_{23}N_3(I)$.— p -Dimethylaminobenzylidenequinaldine ethiodide: 532 (205).
 $C_{22}H_{21}N_2(I)$.—1-Methyl-1'-ethylisocyanine iodide: 558, 519 in EtOH (446).
 1, 6, 1'-Trimethylisocyanine iodide (Pinaverdol, C. I. 807): 558 in EtOH (667); cf. (361a, 668a).
 1, 1', 6'-Trimethylisocyanine iodide: 558 in EtOH (667).
 $C_{22}H_{23}N_2(ClO_4)$.— p -Dimethylaminocinnamylidenequinaldine methyl perchlorate: 523, 341 in EtOH (405 with HCl) (348).
 $C_{22}H_{23}N_2(I)$.—1, 3, 3, 1'-Tetramethylindopseudocyanine iodide: 470 in EtOH (207).
 $C_{22}H_{23}N_2S(I)$.—5, 1', 6'-Trimethyl-2-ethylthioisocyanine iodide: 507, 495 in EtOH (56).
 5-Methyl-2, 1'-diethylthioisocyanine iodide: 508, 492 in EtOH (56).
 $C_{23}H_{13}NO_5$.—Resorcinolquinolineine: 490 in alk. H_2O (467).
 $C_{23}H_{15}NO_4$.—Phenolquinolineine: 533 in alk. H_2O (467).
 $C_{23}H_{21}N_2(I)$.—1, 1'-Dimethyl-2, 2'-carbocyanine iodide: 607, 561, 521 in EtOH (331 with H_2SO_4) (340); cf. (203, 346, 667).
 1, 1'-Dimethyl-4, 4'-carbocyanine iodide: 715 in EtOH (206).
 $C_{23}H_{21}N_2S_2(Br)$.—2, 2'-Diallylcarbocyanine bromide: 560, 522 in EtOH (206).
 $C_{23}H_{22}N_3O(I)$.—5-Acetyl-amino-1, 1'-dimethylisocyanine iodide: 560, 525 in EtOH (202).
 6-Acetyl-amino-1, 1'-dimethylisocyanine iodide: 570, 530 in EtOH (202).
 7-Acetyl-amino-1, 1'-dimethylisocyanine iodide: 565, 530 in EtOH (202).
 6'-Acetyl-amino-1, 1'-dimethylisocyanine iodide: 565, 530 in EtOH (202).
 7'-Acetyl-amino-1, 1'-dimethylisocyanine iodide: 555, 525 in EtOH (202).

$C_{23}H_{22}N_2(I)$.—1, 6, 1', 6'-Tetramethylisocyanine iodide: 562 in EtOH (667).
 1, 6-Dimethyl-1'-ethylisocyanine iodide: 560 in EtOH (667).
 1, 1'-Diethylisocyanine iodide (Ethyl Red, C. I. 807): 558, 517 in EtOH (446); cf. (301).
 1, 6, 1', 6'-Tetramethylpseudocyanine iodide: 522, 490 in EtOH (207).
 1, 1'-Diethylpseudocyanine iodide: 525, 490 in EtOH (207); cf. (555).
 $C_{23}H_{22}N_2(Br)$.—"Rosol red bromide:" 526, 492, 276 in MeOH (342).
 $C_{23}H_{22}N_2OS(I)$.—6'-Ethoxy-2, 1'-diethylthioisocyanine iodide: 506, 493 in EtOH (56).
 $C_{24}H_{24}ClN_2(I)$.—6-Methyl-6'-chloro-1, 1'-diethylisocyanine iodide: 575, 540 in EtOH (587).
 6-Chloro-6'-methyl-1, 1'-diethylisocyanine iodide: 575, 547 in EtOH (587).
 $C_{24}H_{24}N_3(I)$.—*p*-Dimethylaminoanil of β -naphthoquinaldine aldehyde ethiodide: 560 in EtOH (205).
 $C_{24}H_{22}N_2(I)$.—2'-Methyl-1, 1'-diethylisocyanine iodide: 559, 518 (301).
 7-Methyl-1, 1'-diethylisocyanine iodide: 570, 535 in EtOH (587).
 6 (or 6')-Methyl-1, 1'-diethylpseudocyanine iodide: 530, 495 in EtOH (207).
 $C_{23}H_{22}N_2S_2(I)$.—5, 5'-Dimethyl-2, 2'-diethylthiocarbocyanine iodide: 563, 529 in EtOH (448).
 $C_{24}H_{27}N_2(I)$.—3, 3-Dimethyl-1, 1'-diethylindopseudocyanine iodide: 480 in EtOH (207).
 $C_{24}H_{27}N_2OS(I)$.—6'-Ethoxy-5-methyl-2, 1'-diethylthioisocyanine iodide: 511, 499 in EtOH (56).
 $C_{25}H_{17}NO_6$.—Orcinolquinoline: 496 in alk. H_2O (467).
 $C_{25}H_{19}NO_5$.—*o*-Cresolquinoline: 544 in alk. H_2O (467).
 $C_{25}H_{21}N_2(I)$.—1, 1'-Dimethyl-5, 6 (or 5', 6')-benzopseudocyanine iodide: 538, 500 in EtOH (207).
 $C_{25}H_{25}N_2(I)$.—*p*-Dimethylaminobenzylidene- β -naphthoquinaldine ethiodide: 525 in EtOH (205).
 1, 6, 1', 6'-Tetramethyl-2, 2'-carbocyanine iodide: 570, 530 in EtOH (202).
 1, 1'-Diethylcarbocyanine iodide (Pinacyanol, C. I. 808): infra-red abs. (387); 607, 562.5, 519.2 in EtOH (451); cf. (149, 203, 340, 362q, 363q, 450q, 668q).
 1, 4, 1', 2'-Tetramethyl-2, 4'-carbocyanine iodide: 653, 606 (667).
 1, 1'-Diethyl-2, 4'-carbocyanine iodide: 657, 606.5 in EtOH (450q).
 1, 1'-Diethyl-4, 4'-carbocyanine iodide (Kryptocyanine, C. I. 810): 711.5, 655 in EtOH (450q); cf. (449).
 $C_{25}H_{27}Cl_2N_2(I)$.—5, 5'-Dichloro-1, 3, 3, 1', 3', 3'-hexamethylindocarbocyanine iodide: 551, 517, (489) in MeOH (342).
 $C_{25}H_{27}N_2(I)$.—1, 1'-Diethyl-6, 6'-dimethylisocyanine iodide (Orthochrome T, C. I. 807): 520 in alk. H_2O (concd.); 570 (dil.) (269); cf. (362).
 Propylisocyanine: 563, 522 in EtOH (446).
 $C_{25}H_{27}N_2O(I)$.—1, 1'-Diethyl-6-methoxy-6'-methylisocyanine iodide: 580, 540 in EtOH (587).
 1, 1'-Diethyl-6-methyl-6'-methoxyisocyanine iodide: 575, 540 in EtOH (587).
 1, 1'-Diethyl-6'-ethoxyisocyanine iodide: 575, 540 in EtOH (587).
 $C_{25}H_{27}N_2O_2(I)$.—1, 1'-Diethyl-6, 6'-dimethoxyisocyanine iodide: 585, 560 in EtOH (587).
 $C_{25}H_{27}N_4(I)$.—1, 1'-Diethyl-6, 6'-diaminocarbocyanine iodide: 640, 595 in EtOH (204).
 $C_{25}H_{29}N_2(I)$.—1, 3, 3, 1', 3', 3'-Hexamethylindocarbocyanine iodide (Indolenine Red): 548, 512 in EtOH (206); cf. (346); 546, 512, (483), 281 in MeOH (342).

$C_{25}H_{19}N_2(Cl)$.—1, 1'-Benzylidene-2, 2'-quinocyanine chloride (Quinoline Red, C. I. 805): 536, 499 (78).
 $C_{25}H_{29}N_2(I)$.—Methylhexylisocyanine iodide: 560, 519 in EtOH (446).
 $C_{25}H_{29}N_2O(I)$.—1, 1'-Diethyl-6-methyl-6'-ethoxyisocyanine iodide: 575, 545 in EtOH; 580 in $CHCl_3$ or C_7H_8 ; 590 in C_6H_7N (587); bromide, 575, 535 in H_2O ; 577, 535 in EtOH; 583, 540 in $CHCl_3$ (influence of temp. given) (588).
 1, 1'-Diethyl-6-ethoxy-6'-methylisocyanine iodide: 580, 545 in EtOH (587).
 $C_{25}H_{29}N_2O_2(I)$.—1, 1'-Diethyl-6-ethoxy-6'-methoxyisocyanine iodide (Pinachrome, C. I. 807): 530 in alk. H_2O (concd.); 575 (dil.); 580 in EtOH (95%) (269); 535 in H_2O ; 650, 595 in EtOH (588); cf. (361q).
 $C_{27}H_{25}N_2(I)$.—1, 1'-Diallyl-4, 4'-carbocyanine iodide; 715 in EtOH (206).
 1, 1'-Diethyl-5, 6 (or 5', 6')-benzopseudocyanine iodide: 538, 500 in EtOH (207).
 Diethylbenzocisocyanine iodide (?): 580, 548 in EtOH (341).
 $C_{27}H_{29}N_2(Br)$.—1, 1'-Diethyl-4, 4'-dimethyl-2, 2'-carbocyanine bromide (Fischer's α -Pseudodicyanine): 606, 559 in EtOH (316).
 $C_{27}H_{29}N_2(Cl)$.—1, 1'-Diethyl-6, 6'-dimethyl-2, 2'-carbocyanine chloride: 613, 566 in EtOH (316).
 $C_{27}H_{29}N_2(I)$.—1, 1'-Diethyl-2', 4-dimethyl-2, 4'-carbocyanine iodide (Fischer's α -Dicyanine): 655.5, 603.5 in EtOH (450q); cf. (149, 667).
 $C_{27}H_{33}N_2(I)$.—3, 3, 3', 3'-Tetramethyl-1, 1'-diethylindocarbocyanine iodide: 548, 512 in EtOH (206).
 $C_{28}H_{19}N_3$.—*sym*.-Triquinolyl-2-methane: 523, 487 in EtOH (556).
 $C_{28}H_{25}N_2(I)$.—1-Ethyl-1'-methyl-2'-phenylisocyanine iodide: 565, 525 in H_2O or EtOH (301).
 $C_{28}H_{27}N_2(I)$.—1, 1'-Diethyl-6'-methyl-5, 6-benzocisocyanine iodide (?): 585, 550 in EtOH (341).
 $C_{28}H_{27}N_2(Br)$.—1, 1'-Diethyl-5, 6-benzocarbocyanine bromide: 625, 575, 535 in EtOH (451).
 $C_{28}H_{29}N_2(I)$.—6, 6'-Dimethyl-1, 1'-diallyl-2, 2'-carbocyanine iodide: 620, 570 in EtOH (206).
 $C_{29}H_{31}N_4O_2(I)$.—1, 1'-Diethyl-6, 6'-diacetylaminocarbocyanine iodide: 625, 575 in EtOH (204).
 $C_{29}H_{33}N_2(I)$.—1, 1'-Diethyl-4, 6, 4', 6'-tetramethyl-2, 2'-carbocyanine iodide (Fischer's "Pseudodicyanine Iodide"): 611, 565 in EtOH (316).
 $C_{29}H_{33}N_2(Br)$.—1, 1'-Diethyl-4, 6, 2', 6'-tetramethyl-2, 4'-carbocyanine bromide (Fischer's "Dicyanine Bromide"): 662, 610 in EtOH (317).
 $C_{29}H_{33}N_2O_2(I)$.—1, 1'-Diethyl-5, 5'-diethoxycarbocyanine iodide: 603, 559 in EtOH (55).
 1, 1'-Diethyl-6, 6'-diethoxycarbocyanine iodide: 622, 576 in EtOH (55).
 1, 1'-Diethyl-7, 7'-diethoxycarbocyanine iodide: 617, 571 in EtOH (55).
 $C_{29}H_{35}N_2(I)$.—1, 1'-Diisoamylcyanine iodide (Cyanine, C. I. 806): infra-red abs., 0.7, 3.3, (5.1), 6.6, 7.5, 8.5, 9.5, 10.4 μ (296); cf. (80, 510, 511); 586, 550 in H_2O ; 595, 552 in EtOH (3); cf. (114q, 361q, 362q, 528q); influence of temp. (334, 363q).
 $C_{29}H_{35}N_2O_2(I)$.—1, 1'-Diethyl-2, 2'-dimethyl-6, 6'-diethoxyisocyanine iodide: 620 in EtOH (500).
 $C_{30}H_{25}N_3O(I)$.—5-Cinnamoylamino-1, 1'-dimethylisocyanine iodide: 560, 525 in EtOH (202).
 6-Cinnamoylamino-1, 1'-dimethylisocyanine iodide: 575, 535 in EtOH (202).
 6'-Cinnamoylamino-1, 1'-dimethylisocyanine iodide: 570, 530 in EtOH (202).
 7'-Cinnamoylamino-1, 1'-dimethylisocyanine iodide: 560, 520 in EtOH (202).

- $C_{31}H_{31}NO_4$.—Thymolquinoline: 593 in alk. soln. (467).
 $C_{31}H_{27}N_2O_2(I)$.—1, 1'-Diethyl-4, 2'-dimethyl-6, 6'-diethoxy-2, 4'-carbocyanine iodide (Dicyanine A, C. I. 811): 672 in EtOH (500); band at 1.4μ (387).
 $C_{33}H_{27}N_2(I)$.—4, 4'-Diphenyl-1, 1'-dimethylpseudocyanine iodide: 541, 501 (150).
 $C_{33}H_{27}N_2(Br)$.—5, 6, 5', 6'-Dibenzo-1, 1'-diethylcarbocyanine bromide: 638, 588, 550 in EtOH (451).
 $C_{35}H_{29}N_2(I)$.—4, 4'-Diphenyl-1, 1'-diethylcarbocyanine iodide: 624, 576 in EtOH (149).
 $C_{35}H_{33}N_2(I)$.—4, 4'-Diphenyl-1, 6, 1', 6'-tetramethylpseudocyanine iodide: 547, 507 in EtOH (150).
 $C_{37}H_{33}N_2(I)$.—4, 4'-Diphenyl-1, 6, 1', 6'-tetramethylcarbocyanine iodide: 631, 581 in EtOH (149).
 $C_{44}H_{44}ClN_4O_6(I)$.—4'-Chloro-3, 3'-di-(*o*-carbethoxyphenylmethylcarbonyl)-1, 2, 1'-trimethylisocyanine iodide: 574, 325 (250).

TABLE 7.—AZINE DERIVATIVES

$C_{12}H_8N_2$.—Phenazine: 355 in EtOH (217); *cf.* (111, 317); 360, (240) in Et₂O (309); monacid salt, 450, 385, 255 (309); *cf.* (317); diacid salt, 552, 506, 395, 265 (317); *cf.* (309, 316).

$C_{12}H_8N_2O_2$.—3, 6-Dihydroxyphenazine: 510 (465).

$C_{12}H_9N_3$.—3-Aminophenazine: 472, 265 in EtOH (317); 468, 365, 265 in Et₂O (309); monacid salt, 557, 516, 385, 285, 255 in H₂O (309); *cf.* (155); 557, 516.8, 483 in EtOH (155); 385, 280 (317); diacid salt, 750 in HCl; triacid salt, 541, 506 in H₂SO₄ (317); *cf.* (309).

$C_{12}H_{10}N_4$.—2, 3-Diaminophenazine: 454, 285, 265 in EtOH (317); chloride, 483.7, 455.5, 433.8 in EtOH (155); 285 (317); diacid salt, 505, 463 in EtOH; triacid salt, 505 in H₂SO₄; tetraacid salt (598), (489) in fuming H₂SO₄ (317).

$C_{12}H_{10}N_4$.—3, 6-Diaminophenazine: 447, 265 in EtOH (317); chloride, 513, 491.5 in H₂O (155); 521.7, 490 in EtOH (155); 280 (317); diacid salt, 580 in EtOH; polyacidic salts (317).

$C_{12}H_{10}N_4$.—Aminophenylphenazine: 310 in EtOH + HCl (377).

$C_{13}H_{10}N_4O_4$.—1, 3-Dinitromethyldihydrophenazine: 581, 538 (304).

$C_{13}H_{11}N_2$.—*N*-Methylphenazine: monacid salt, 390, 260 in acid EtOH; diacid salts, 560, 510, 400, 265 in H₂SO₄ (316); *cf.* (309); holo- and merquinoid salts (217).

$C_{13}H_{11}N_3$.—3-Aminomethylphenazine: 530, 505, 490 in Et₂O; monacid salt, 562, 525, (494), 385, 285 in EtOH; diacid salt, 674.5, 610, 459 in H₂SO₄; triacid salt, 520, 490 in fuming H₂SO₄ (319); *cf.* (308, 309).

$C_{13}H_{13}N_4(ClO_4)$.—3, 6-Diaminomethylphenazine perchlorate: 530, 483 in EtOH (320); *cf.* (318).

$C_{15}H_{13}N_4(Cl)$.—Cyantrypaflavine: 533, 501, 275 in EtOH (221).

$C_{16}H_{19}N_4(Cl)$.—3, 5-Tetramethyldiaminophenazonium chloride: 510 in H₂O (465).

$C_{17}H_{21}N_4(Cl)$.—3, 5-Tetramethyldiaminomethylphenazonium chloride: 567, 280, 265 in EtOH (182).

$C_{18}H_{16}N_4$.—Phenazineazine: 431 (111).

$C_{18}H_{12}Cl_2N_2(Cl)$.—3, 6-Dichlorophenylphenazonium chloride: 411, 269 in EtOH (23).

$C_{18}H_{12}N_2O_2$.—Hydroxyaposafranine: 488, 263 in dil. NaOH soln.; 479, 270 in dil. HCl (23).

$C_{18}H_{13}N_3$.—Phenylphenazine: monacid salt, 395, 265 in EtOH; diacid salt, 570, 525, 416, 270 in H₂SO₄ (316); *cf.* (309).

$C_{18}H_{13}N_3$.—1-Aminophenylphenazine: monacid salt, 487, 390, 310, 240 (nitrate in EtOH) (319); *cf.* (245); diacid salt, 390, 263 in H₂SO₄; triacid salt, 603, 485 in 100% H₂SO₄ (319); *cf.* (309).

2-Aminophenylphenazine: monacid salt, 582 in EtOH; diacid salt, 400, 288 in EtOH + H₂SO₄; triacid salt, 575, 470 in H₂SO₄ (319).

3-Aminophenylphenazine (Aposafarine): 555, 512, 483 in EtOH (319); 290 (309); monacid salt, 563, 519, 483, 390, 285 in EtOH; diacid salt, 694, 625, 570, (465), 420, 285 in 60% H₂SO₄; triacid salt, 580, 520, 490, 420, 270 in H₂SO₄ (319); *cf.* (155, 309, 324).

$C_{18}H_{16}N_3$.—Dimethylnaphtheurhodine: 482 in EtOH (or CHCl₃) (377).

$C_{18}H_{16}N_4(ClO_4)$.—1, 3-Diaminophenylphenazine perchlorate: 585, 463, 431, 295 in EtOH; diacid salt, 564, 530, 490, 395, 285 in EtOH + H₂SO₄; triacid salt, 483 in H₂SO₄; tetraacid salt, 530 in fuming H₂SO₄ (320); *cf.* (308, 309).

2, 6-Diaminophenylphenazine perchlorate: 640, 605, 330, 295 in EtOH; diacid salt, 565, 528, 483, 390, 285 in EtOH + H₂SO₄; triacid salt, 610, (583), 410, 295 in H₂SO₄ (320); *cf.* (309).

$C_{18}H_{16}N_4(Cl)$.—2, 13-Diaminophenylphenazine chloride: monacid salt (460), 400, 297, 265 in acid EtOH; abs. of diacid salt indefinite; triacid salt, 563, 518, 410, 275 in concd. H₂SO₄ (309).

3, 6-Diaminophenylphenazine chloride (Phenosafranine, C. I. 840): 525, 494 in H₂O (155); 534, 501, 270 in EtOH; diacid salt (645), 586, 400, 290 in acid EtOH; triacid salt, (583) in H₂SO₄; tetraacid salt, 570 in fuming H₂SO₄ (320); influence of concn. (269); *cf.* (23, 354, 221, 308, 309, 467). Phenosafranineazodimethylaniline, 579; phenosafraninedisazo-*bis*-dimethylaniline: 513 (111).

3, 7-Diaminophenylphenazine chloride: diacid salt, 567, 530 in acid EtOH (308).

3, 11-Diaminophenylphenazine chloride: 572, 535, 490 in EtOH; diacid salt, 565, 525 in acid EtOH (308); *cf.* (246).

3, 13-Diaminophenylphenazine chloride: 572, 535, 490, 395, 285 in H₂O; diacid salt, 565, 525, 490, 400, 286 in dil. H₂SO₄ (309); *cf.* (35).

$C_{19}H_{15}N_3$.—3-Phenylaminomethylphenazine: 525 in Et₂O; monacid salt, 565, 410, 285 in EtOH; diacid salt, 478 in H₂SO₄ (319).

$C_{20}H_{15}N_3O$.—2-Acetylaminophenylphenazine: monacid salt, 500, 400, 285 in EtOH; diacid salt, 570, 515, (470) in H₂SO₄ (319).

$C_{20}H_{16}N_3O$.—3-Acetylaminophenylphenazine: 564, 530, 499 in EtOH; monacid salt, 508, (489), (472), 410, 285 in EtOH; diacid salt, 579, 520, 441, 415 in H_2SO_4 (319); cf. (309).

$C_{20}H_{17}N_4O(Cl)$.—1-Acetyl amino-3-aminophenylphenazine chloride: 590, 548 in EtOH (320).

2-Acetyl amino-6-aminophenylphenazine chloride: 582, 543 in EtOH (320).

$C_{20}H_{18}N_4(Cl)$.—*asym.*-Dimethylphenosafranine chloride (C. I. 842): 550, 526.5 in H_2O ; 551.9, 511.5 in EtOH; 555, 514.4 in AmOH (155).

Ethylphenosafranine chloride: 537.5, 502.4 in H_2O ; 539.3, 500 in EtOH; 543, 503 in AmOH (155).

$C_{21}H_{21}N_4(Cl)$.—Diamino-*o*-tolyliditolazine chloride (with phenyl isomer, commercial Safranine, C. I. 841): 495 in H_2O (concd.); 515 (dil.) (269); ultra-violet abs. and influence of acidity (388); on silk (10, 627); 535, 515 on wool (522); cf. (1624, 391). Safranine-azodimethylaniline (C. I. 133): infra-red abs. (511). Safranine-azo- β -naphthol (C. I. 135): 600 on cotton, 608.5 with tannin mordant (627).

$C_{22}H_{18}N_3$.—Phenyl naphthophenazine: monacid salt, 480, 290; diacid salt, 524, 513, 484, 303 (321); cf. (324).

Phenylisonaphthophenazine: monacid salt (475), 415, 292 in H_2O (325); 496 in EtOH (322); diacid salt, 632, 598, 503, 310 in H_2SO_4 (325); cf. (322).

$C_{22}H_{18}N_3$.—2-Aminophenyl naphthophenazine: monacid salt, 545, (490), 440, 312, 290; diacid salt, 290: triacid salt, 510, 485, 305 (321); cf. (324).

2-Aminophenylisonaphthophenazine: 580, 560, 465, perchlorate in EtOH; diacid salt, 490 in 50% H_2SO_4 ; triacid salt, 590, 506, 450 in fuming H_2SO_4 (322); cf. (325).

3-Aminophenyl naphthophenazine (Isorosinduline): 575, 531, 493 in Et₂O; monacid salt, 565, 533, 425, 310, 282, 265; diacid salt, 690, 481, 285; triacid salt, 529, 517, 485, 302 (321); cf. (324).

3-Aminophenylisonaphthophenazine: monacid salt, 581, 540, 499; diacid salt, 430 in 50% H_2SO_4 ; triacid salt, 590, 505, 450 in fuming H_2SO_4 (322); cf. (325).

6-Aminophenyl naphthophenazine (Rosinduline): 599, 556, 516, 483 in Et₂O; monacid salt, 533, 501, 472, 313; diacid salt, 668, 605, 555, (453), 335; triacid salt, 530, 512, 490 (321); cf. (324).

6-Aminophenylisonaphthophenazine: monacid salt, 581, 545, (425), 335, 270 in H_2O ; diacid salt, 395, 293 in 30% H_2SO_4 ; triacid salt, 586, 539, 482, 303 in concd. H_2SO_4 (325); cf. (322).

7-Aminophenyl naphthophenazine: monacid salt (577), 350, 277; diacid salt, 288; triacid salt, 583, 500, 302 (321); cf. (324).

7-Aminophenylisonaphthophenazine: monacid salt, 580, 544, 335, 285 in H_2O ; diacid salt, 462, 296 in 35% H_2SO_4 ; triacid salt, 583, 535, 485, 305 in concd. H_2SO_4 (325); cf. (322).

8-Aminophenyl naphthophenazine: monacid salt, (486), 456, 333, 285; diacid salt 290; triacid salt, 577, 496, 460, 304 (321); cf. (324).

8-Aminophenylisonaphthophenazine: monacid salt, 586, 547, 457, (362), 332, 272 in H_2O ; diacid salt (475), 400, 290 in 30% H_2SO_4 ; triacid salt, 584, 536, 482, 303 in concd. H_2SO_4 (325); cf. (322).

9-Aminophenyl naphthophenazine: monacid salt, 585, 480, 442, 335; diacid salt, 287; triacid salt, 579, 495, 460, 288 (321); cf. (324).

9-Aminophenylisonaphthophenazine: monacid salt, 585, 553, 408, 325 in H_2O ; diacid salt, 580, 458, 333, in 50% H_2SO_4 ; triacid salt, 583, 532, 508, 450, 310 in H_2SO_4 (325); cf. (322).

10-Aminophenyl naphthophenazine: monacid salt, (465), 290; diacid salt, 290 (321); cf. (324).

10-Aminophenylisonaphthophenazine: chloride in H_2O , 420, 335, 260 (245); diacid salt, 489, (450) in dil. H_2SO_4 ; triacid salt, 585, 535, 490 (322).

12-Aminophenyl naphthophenazine: monacid salt, 287; diacid salt, 290; triacid salt, (645, 593), (520, 488, 452), 310 (321); cf. (324).

13-Aminophenyl naphthophenazine: monacid salt, 287; diacid salt, 290; triacid salt, (590), (528, 492), (540), (310) (321); cf. (324).

13-Aminophenylisonaphthophenazine: perchlorate in EtOH, 475; diacid salt, 488 in 10% H_2SO_4 ; triacid salt, 590, 500, (470?), 450 in concd. H_2SO_4 (322).

$C_{22}H_{18}N_4O_2(Cl)$.—1, 3-Di-(acetyl amino)-phenylphenazine chloride: 580, 505 in EtOH (320).

2, 6-Di-(acetyl amino)-phenylphenazine chloride: 545, 504 in EtOH (320).

$C_{22}H_{23}N_4(Cl)$.—*asym.*-Diethylphenosafranine chloride: 561.8, 531.2 in H_2O ; 556.1, 569.3 in EtOH; 558.5, 517.5 in AmOH (155).

$C_{24}H_{12}N_6$.—Phenazineazineazine: 432 (111).

$C_{24}H_{17}ClN_3(Cl)$.—3-Chloro-6-phenylaminophenylphenazine: 545, 405, 316 (23).

$C_{24}H_{18}N_4$.—3-Phenylaminophenylphenazine: 516 in Et₂O; monacid salt, 569.3, 400, 285 in EtOH; diacid salt, 490 in H_2SO_4 (319).

$C_{24}H_{18}N_4$.—2, 3-Di-(phenyl amino)-phenazine: 480, 285 in EtOH; monacid salt, 508, 285 in EtOH; diacid salt, 542 (317).

$C_{24}H_{19}N_4(Cl)$.—Phenylphenosafranine chloride: 547 in H_2O ; 556 in EtOH; 561 in AmOH (155).

$C_{24}H_{20}N_3(Cl)$.—Dimethylisorosinduline chloride (Neutral Blue, C. I. 832): infra-red abs. (296).

$C_{26}H_{21}N_4(ClO_4)$.—3, 6-Di-(phenyl amino)-methylphenazine perchlorate: 572 in EtOH (320).

$C_{26}H_{22}N_4$.—3, 6-Di-(tolyl amino)-phenazine: 494, 285 in EtOH; monacid salt, 572, 285 in EtOH; polyacidic salts (317). Indazine M: 598.5 on cotton; 610 with tannin mordant (627).

$C_{26}H_{23}N_4(Cl)$.—Tetraethylphenosafranine chloride (C. I. 847): 589, 548.9 in H_2O ; 578.7, 534.8 in EtOH; 580.2, 535.7 in AmOH (155); 579, 535, 285 in EtOH (221); perchlorate in EtOH, 595, 545 (320).

$C_{27}H_{25}N_4(ClO_4)$.—3, 6-Di-(*p*-tolyl amino)-methylphenazine perchlorate: 580 in EtOH (320).

Aminophenyl amino-*p*-tolyliditolazonium salts (and homologs) C. I. 846: Aniline violet, various salts (497).

$C_{28}H_{19}ClN_3(NO_3)$.—3-Chloro-6- α -naphthylaminophenylphenazine nitrate: 549, 390, 303 (23).

$C_{30}H_{20}N_3Cl$.—Aminonaphthylidindaphthazine and diamino isomer (Magdala Red, C. I. 857): 570 in EtOH; 575 in $C_6H_5NH_2$ (299q).

$C_{30}H_{23}N_4(Cl)$.—*sym.*-Diphenylphenosafranine chloride: 570.7 in H_2O ; 580.7 in EtOH; 585.7 in AmOH (155).

$C_{32}H_{24}ClN_4(NO_3)$.—3-Chloro-7-phenyl amino-6-naphthyl amino-phenylphenazine nitrate: 561, 303 (23).

$C_{34}H_{26}N_4(NO_3)$.—3-Phenyl amino-6- α -naphthylaminophenylphenazine nitrate: 561, 302 (23).

Fast Blue: influence of concn. (299). Induline dyes: (65). Nigrosine SS: infra-red abs. (387). Rhoduline Blue R: 550 in H_2O (concd.), 565 (dil.) (269). Rhoduline Red B (C. I. 844): 510 in H_2O (concd.), 533 (dil.) (269). Azine and eurhodol dyes obtained from the reduction products of azo dyes (123).

TABLE 8.—OXAZINE DERIVATIVES

$C_{12}H_2BrNO_3(NH_4)$.—Tetrabromoresorufin, NH_4 salt (C. I. 908): (481).

$C_{12}H_5N_3O_9$.—1, 3, 5, 7-Tetranitrophenazoxine: (304).

1, 3, 6, 7-Tetranitrophenazoxine: 642 in alk. EtOH (304).

1, 3, 6, 8-Tetranitrophenazoxine: 632 in alk. EtOH (304).

$C_{12}H_5N_4O_7$.—1, 3, 6-Trinitrophenazoxine: 639 in alk. EtOH (304).

1, 3, 7-Trinitrophenazoxine: 505 in alk. EtOH (304).

$C_{12}H_7N_2O_3$.—Resorufin: 568, 422 in EtOH (648); K salt, 573.6, 554.8, 530.8 in H_2O ; 588.5, 578.8, 559.4, 540.1 in EtOH; 592.4, 580.5, 561.2, 543.5 in AmOH (155); cf. (465, 497).

$C_{12}H_7NO_4$.—Resazurin: Na salt, 601, 555.9 in H_2O ; 610.2, 587.5 in EtOH; 629.8, 612, 592.5, 574, 559.6 in AmOH (155); cf. (497).

$C_{12}H_7N_3O_5$.—1, 3-Dinitrophenazoxine: 534, 502 in EtOH (304).

3, 6-Dinitrophenazoxine: 704 in alk. EtOH (304).

$C_{12}H_5NO$.—Phenazoxonium salts: monoacid, 505 (312); 410, 313 (309); diacid, 460 (in $H_2SO_4 + H_2O_2$) (312).

$C_{12}H_5N_2O_3$.—3-Nitrophenazoxine: 678, 618, 572 in alk. EtOH (304).

$C_{12}H_5N_2O_2$.—Resorufamine: 577.7, 533.9 in H_2O ; 578.7, 535.7 in EtOH; 580.2, 536.6 in AmOH (155).

$C_{12}H_5N_2O$.—1-Aminophenazoxonium salts: monoacid, 400, 285, 265; diacid, 535, (480), 430, 265 (in H_2SO_4) (312); cf. (309).

3-Aminophenazoxonium salts: monoacid, 492, 285, 265; diacid, 640, 590, 285, 265 (312); cf. (309).

$C_{12}H_{10}N_3O$.—1, 3-Diaminophenazoxonium salts: monoacid, (440) in dil. H_2SO_4 ; diacid (568), 529, 265 in 50% H_2SO_4 (309).

3, 6-Diaminophenazoxonium salts: chloride, 586.8, 541.5 in H_2O ; 593, 574.5, 545.1 in EtOH; 598.3, 579.5, 549.5 in AmOH (155); bands at (410) in H_2O (309) and at 285, 265 in EtOH (313); triacid salt, 522 (with fuming H_2SO_4) (309).

$C_{14}H_{12}N_2O_2$.—Dimethylresorufamine: 591.7, 545.5 in H_2O ; 580, 538.5 in EtOH; 576.2, 535.7 in AmOH (155).

$C_{14}H_{12}NO$.—3, 6-Dimethylphenazoxonium salts: monoacid, 560, (460); diacid, 500 (in H_2SO_4) (312); cf. (309).

$C_{14}H_{14}N_3O(Cl)$.—*asym.*-3, 6-Dimethyldiaminophenazoxonium chloride: 619.5, 570 in H_2O ; 616, 597.1, 566.8 in EtOH; 618, 598.5, 568.2 in AmOH (155).

$C_{15}H_{12}N_2O_5$.—Dimethylaminohydroxycarboxydiphenoxazone (C. I. 883): Gallocyanine W, 520 in H_2O (concd.), 620 (dil.) (269).

$C_{15}H_{16}N_3O(Cl)$.—3, 5-Trimethyldiaminophenazoxonium chlo-

ride: 633.1, 579 in H_2O ; 628.5, 609.9, 575.3, in EtOH; 630.6, 611.1, 577 in AmOH (155).

3-Aminopheno-6-dimethylamino-*o*-tolazoxonium chloride: 628.2, 578.5 in H_2O ; 625.7, 603.9, 576 in EtOH; 628.2, 606.7, 578.5 in AmOH (155); cf. (499). Brilliant Cresyl Blue, 575 in H_2O (concd.), 625 (dil.); base, 485 in $CHCl_3$ (677).

$C_{15}H_{11}N_3O$.—3-Aminonaphthophenazoxonium salts: chloride, 581.7, 538.5, 500.2 in H_2O (155); 586, 540, 499, 275, 315 in EtOH; triacid salt, 580 in 25% oleum; base, 519 in Et₂O (315).

6-Aminonaphthophenazoxonium salts: chloride, 464, 335, 285, 265 in EtOH (315); diacid salt, 575 in concd. H_2SO_4 (303); cf. (315).

$C_{16}H_{12}N_3O$.—3, 6-Diaminonaphthophenazoxonium salts: chloride, 590.4, 544.5 in H_2O ; 610.5, 593, 545.5 in EtOH; 615.9, 595.6, 570.7 in AmOH (155); monoacid salt, ultra-violet bands at 320, 266 in EtOH; diacid salt, 460 in H_2SO_4 ; triacid salt, 585 in oleum (315).

3, 6-Tetramethyldiaminophenazoxonium salts: chloride, 648.9, 591.4 in H_2O ; 643.3, 620.7, 588.6 in EtOH; 644.6, 622.3, 589.8 in AmOH (155); nitrate, 645, 588, 285, 260 in EtOH (313); cf. (221); triacid salt, 557, 518 (oleum) (309).

asym.-3, 6-Diethyldiaminophenazoxonium chloride: 622.5, 573.2 in H_2O ; 619.2, 598.5, 569.3 in EtOH; 621.3, 599.9, 571 in AmOH (155).

asym.-3, 6-Dimethyldiamino-2,7-di-*o*-tolazoxonium chloride: 631.4, 581 in H_2O ; 628.5, 606.9, 578.5 in EtOH; 629.8, 608.4, 580 in AmOH (155).

$C_{17}H_{20}N_3O(Cl)$.—3, 6-Tetramethyldiaminopheno-*o*-tolazoxonium chloride: 660, 602.2 in H_2O ; 653.7, 597 in EtOH; 655.2, 633.7, 597.9 in AmOH (155).

$C_{18}H_{14}N_3O(Cl)$.—3, 6-Phenyldiaminophenazoxonium chloride: 605, 285, 265 in EtOH (312).

$C_{18}H_{16}N_3O$.—3-Dimethylaminonaphthophenazoxonium salts: chloride, 620.1, 572, 531.2 in H_2O ; 623, 574.5, 533 in EtOH; 628.8, 578.2, 536.1 in AmOH (155); cf. (249, 303, 315); diacid salt, 520 (H_2SO_4) (315); influence of concn. (269). (Meldola's Blue, C. I. 909.)

3-Dimethylaminoisonaphthophenazoxonium salts: nitrate in EtOH with trace of HCl, 620, 582 (303).

$C_{18}H_{15}N_2O_2(Cl)$.—3-Dimethylamino-9-hydroxynaphthophenazoxonium chloride (C. I. 915): 627.8, 575.7, 534.8 in H_2O ; 637.6, 584.5, 541.5 in EtOH; 647.2, 591.4, 547.5 in AmOH (155).

$C_{18}H_{16}N_3O(Cl)$.—3-Dimethylamino-6-aminonaphthophenazoxonium chloride: 636.4, 582.7 in H_2O ; 624.5 in EtOH; 623.6 in AmOH (155); cf. (183, 303).

$C_{18}H_{22}N_3O(Cl)$.—*asym.*-3, 6-Dimethyldiethyldiaminophenazoxonium chloride: 651.7, 594.5 in H_2O ; 645.1, 622, 590.9 in EtOH; 646.9, 623.9, 591.9 in AmOH (155).

3, 6-Triethyldiaminophenazoxonium chloride: 637.4, 584.5 in H_2O ; 632.4, (611.1), 579 in EtOH; 634.2, 612.3, 581 in AmOH (155).

$C_{19}H_{18}N_3O(Cl)$.—3-Dimethylamino-6-aminonaphtho-*o*-tolazoxonium chloride (Cresyl Violet): 585 in H_2O ; 603 in EtOH (6); cf. (1629).

$C_{19}H_{24}N_3O(Cl)$.—3-Dimethylaminopheno-6-diethylamino-*o*-tolazoxonium chloride (C. I. 876): 644.4, 606.4 in H_2O ; 656.7, 599.9 in EtOH; 658.1, 636, 601.3 in AmOH (155).

3-Diethylaminopheno-6-dimethylamino-*o*-tolazoxonium chloride: 653.7, 632.7, 597.1 in EtOH; 656.3, 634.7, 599.6 in AmOH; 603 in H_2O (155).

$C_{20}H_{18}N_3O(Cl)$.—3-Phenylamino-6-dimethylaminophenazoxonium chloride: 651, 265 in EtOH (313).

9-Acetylamino-3-dimethylaminoisonaphthophenazoxonium chloride: 590 in EtOH with trace of HCl (303).

$C_{20}H_{19}N_2O(Cl)$.—3-Diethylaminonaphthophenazoxonium chloride: 622.3, 573.3, 532.1 in H_2O ; 625.2, 575.7, 533.9 in EtOH; 631.1.

C₂₀H₁₉N₂O(Cl).—(Continued)

579.5, 537 in AmOH (155); *cf.* (183); chlorate in EtOH with trace HCl, 629, 585, 539 (303).

C₂₀H₁₉N₂O(ClO₄).—3-Diethylaminoisonaphthophenazoxonium perchlorate: 625, 580 in EtOH with trace HCl (303).

C₂₀H₁₉N₃O.—3-Diethylamino-6-aminonaphthophenazoxine: 525 in abs. EtOH (303).

C₂₀H₂₀N₂O(Cl).—3, 6-Tetramethyldiaminonaphthophenazoxonium chloride (C. I. 911): 662.2, 603.5 in H₂O; 656.3 in EtOH; 652.6 in AmOH (155).

3-Dimethylamino-6-ethylaminonaphthophenazoxonium chloride: 641.8, 587 in H₂O; 634.1 in EtOH; 633.7 in AmOH (155).

3-Diethylamino-6-aminonaphthophenazoxonium chloride: 643.5, 592 in H₂O; 630.4 in EtOH; 629.4 in AmOH (155); polyacidic salts (303); influence of concn. (269). (The sulfate is Nile Blue A, C. I. 913. Nile Blue A-azodimethylaniline has max. abs. at 582 (111).)

C₂₀H₂₆N₃O(Cl).—3, 6-Tetraethyldiaminophenazoxonium chloride: 664.6, 597.4 in H₂O; 646.9, 624, 592.2 in EtOH; 649, 626.1, 593.5 in AmOH (155).

C₂₁H₂₀N₃O(Cl).—3-Phenylaminopheno-6-dimethylamino-*o*-tolazoxonium chloride: 656.3 in H₂O; 658.1 in EtOH or AmOH (155).

C₂₂H₂₁N₃O₂.—3-Diethylamino-6-acetylaminonaphthophenazoxine: 560 in abs. EtOH (303).

C₂₂H₂₂N₃O₂(Cl).—3-Diethylamino-6-acetylaminonaphthophenazoxonium chloride: 662, 602 in EtOH with trace HCl (303).

3-Diethylamino-9-acetylaminonaphthophenazoxonium chloride: 596 in EtOH with trace HCl (303).

C₂₄H₁₈N₃O(Cl).—*sym.*-3, 6-Diphenyldiaminophenazoxonium chloride: 664, 285, 265 in EtOH (313).

C₂₄H₂₀N₃O(Cl).—3-Dimethylamino-9-phenylaminonaphthophenazoxonium chloride: 605.5, 555.9, 518.6 in H₂O; 585.7, 545.5 in EtOH; 585, 543.5 in AmOH (155).

3-Dimethylamino-6-phenylaminonaphthophenazoxonium chloride: 645 in EtOH with trace HCl (303).

C₂₄H₂₈N₃O(Cl).—3, 6-Tetraethyldiaminonaphthophenazoxonium chloride: 671.4, 615.3 in H₂O; 671.4 in EtOH; 674.6 in AmOH (155).

C₂₅H₂₂N₃O(Cl).—3-Dimethylamino-6-*p*-tolylaminonaphthophenazoxonium chloride: 670, 600 in H₂O; 670 in EtOH (183).

C₂₆H₂₂N₄O₂(Cl)₂.—Di-Meldola's Blue: 702 (111).

C₂₆H₂₄N₃O(Cl).—3-Diethylamino-6-phenylaminonaphthophenazoxonium chloride: triacid salt, 582 (303).

C₂₇H₂₆N₃O(Cl).—3-Diethylamino-6-*p*-tolylaminonaphthophenazoxonium chloride: 670, 615 in H₂O; 670 in EtOH (183).

3-Diethylamino-6-benzylaminonaphthophenazoxonium chloride (C. I. 914): 592 in H₂O (concd.), 650 (dil.) (269).

C₃₂H₂₈N₃O.—3-Diethylamino-6-diphenylaminonaphthophenazoxine: 550 in abs. EtOH (303).

TABLE 9.—THIAZINE DERIVATIVES

C₁₂H₅Cl₄NS.—Tetrachlorothiodiphenylamine: 596 in H₂SO₄ (625).

C₁₂H₆N₄O₄S.—1, 3, 6-Trinitrothiodiphenylamine: 667 in alk. EtOH (304).

C₁₂H₇Cl₂NS.—Dichlorothiodiphenylamine: 569 in H₂SO₄ (625).

C₁₂H₇NOS.—3-Oxythiazine (Thiazone): 543 in H₂O; (acid salts) (529).

C₁₂H₇NO₂S.—6-Hydroxythiazone (Thionol): 584.5, 544.5 in H₂O; 594.8, 558 with alkali; 607.2, 596, 579, 554.8 with alk. EtOH (155); *cf.* (465).

C₁₂H₇N₂O₄S.—1, 3-Dinitrothiodiphenylamine: (595), 520 in alk. EtOH (304).

3, 6-Dinitrothiodiphenylamine: 492 in alk. EtOH (304).

C₁₂H₈ClNS.—Chlorothiodiphenylamine: 544 in H₂SO₄ (625).

C₁₂H₈N₂O₂S.—3-Nitrothiodiphenylamine: 703, 641, 589 in alk. EtOH (304).

C₁₂H₈N₂OS.—3-Hydroxy-6-aminothiazine (Thionoline): 592.2, 547.5 in H₂O; 595.3, 580, 552.6 in EtOH (155); *cf.* (5, 42).

C₁₂H₈NS.—Thiazine: acid salt, 518, 435; diacid salt, 520, 460, 290 (H₂SO₄) (313); *cf.* (309, 323).

C₁₂H₈NS.—Thiodiphenylamine: 520, 478, 461 in H₂SO₄ (Ber. 27: 3321; 94).

C₁₂H₈N₂S.—1-Aminothiazine: acid salt, 410, 290 in acid EtOH; diacid salt, 540, 440, 290 (H₂SO₄) (313); *cf.* (309).

3-Aminothiazine (Thiazime): chloride, 598.5, 554.8, 516 in H₂O; 593, 548.5, 511.2 in EtOH (155); 292 (H₂O) (311); diacid salt, 470 (H₂SO₄) (309); *cf.* (42, 323, 529).

C₁₂H₁₀N₂S.—Aminothiodiphenylamine: 555.9, 515.2 in H₂O (153).

C₁₂H₁₀N₃S(Cl).—1, 3-Diaminodiphenazthionium chloride: 486, 310 in dil. H₂SO₄ (309).

2, 7-Diaminodiphenazthionium chloride: 535 (42); 532 (625).

3, 6-Diaminodiphenazthionium chloride (Thionine, C. I. 920); 602.5, 559.4 in H₂O; 605.3, 588.3 in EtOH (155); 284 in H₂O (309); triacid salt, 470 (H₂SO₄) (309); influence of temp. (57); influence of concn. (269); *cf.* (5, 42, 111, 307, 465, 529).

C₁₃H₁₁N₂S(ClO₄).—3-Methylaminodiphenazthionium perchlorate: 596, 553, (514), 290 in acid EtOH (311).

C₁₃H₁₁NOS.—*N*-Methylthiodiphenylamine sulfoxide: acid salt, 515; diacid salt, 460 (H₂SO₄) (313).

C₁₃H₁₂N₂S(Cl).—Methylthionine chloride: 611.4, 568.2 in H₂O; 614.7, 598.5, 567 in EtOH (155).

3, 6-Diaminopheno-*o*-tolazthionium chloride: 604.4, 562.5 in H₂O; 607.2, 590.9 in EtOH (155).

3, 6-Diaminopheno-*m*-tolazthionium chloride: 592 in H₂O (153); 604.4, 587.5 in EtOH (155).

C₁₄H₈Br₂N₂OS.—Tetrabromomethylene violet: 580, 536 in C₆H₅CH₃; 590, 557 in C₆H₅NO₂; 612 in H₂SO₄; 551, 596 in HOAc; 600, 557 in AmOH (625, 580 with KOEt) (182).

C₁₄H₁₁N₂OS(Cl).—3-Acetaminodiphenazthionium chloride: 556, 458 in H₂O (529).

C₁₄H₁₂NS.—3, 6-Dimethylthiazine: holo- and meriquinoid salts; visible and ultra-violet spectrum of sulfate (323); visible spectrum of chloride (529).

C₁₄H₁₃N₂S(ClO₄).—3-Dimethylaminodiphenazthionium perchlorate: 635, 586, (536), 293 in EtOH (311).

C₁₄H₁₃N₂OS(Cl).—Dimethylthionoline chloride (Bernthsen's Methylene Violet): 622.3, 573.2 in H₂O; 601.6, 558.1 in EtOH (155); *cf.* (5, 42).

C₁₄H₁₄N₂S(Cl).—*sym.*-Dimethylthionine chloride: 620.1, 574.5 in H₂O; 617.8, 572 in EtOH (155); *cf.* (5).

asym.-Dimethylthionine chloride (Azure A): 638, 587 in H₂O; 630.1, 579.5 in EtOH (155); *cf.* (307); influence of temp. (57).

Ethylthionine chloride: 612.2, 570.7 in H₂O; 617.1, 600.7, 569.5 in EtOH (155).

C₁₅H₁₆N₂S(Cl).—*asym.*-Dimethyldiaminopheno-*o*-tolazthionium chloride: 640, 588.3 in H₂O; 630.8, 580.2 in EtOH (155). Toluindine Blue O (C. I. 925): 580 in H₂O (concd.), 635 in H₂O (dil.) (269).

asym.-Dimethyldiaminopheno-*m*-tolazthionium chloride: 627.6, 578.2 in H₂O; 626.5, 630, 579.5 in EtOH (155).

Trimethylthionine chloride: 651.7, 596.1 in H₂O; 642.4, 588.3 in EtOH (155); *cf.* (277).

C₁₆H₁₄N₂O₂S(Cl).—Diacylthionine chloride: 535 in H₂O (529).

C₁₆H₁₇INS(I).—Iodomethylene blue iodide: 661.4, 610.9 in H₂O; 659.2, 610.2 in EtOH (180).

C₁₆H₁₇N₂S(Br).—3-Diethylaminodiphenazthionium bromide: 638, 589, (540), 293 in acid EtOH (311).

$C_{16}H_{17}N_2OS(Cl)$.—Diethylthionine chloride: 625.5, 577 in H_2O ; 607.2, 561.8 in EtOH (155).

$C_{16}H_{17}N_4O_2S(Cl)$.—Nitromethylene blue: 658, 606, (470), 280 in H_2O ; 400, 300 in 90% H_2SO_4 (309). Methylene Green B (C. I. 924): 665 on cotton (627); influence of concn. (269).

$C_{16}H_{18}N_3S(Cl)$.—*sym.*-Diethylthionine chloride: 621.6, 575.7 in H_2O ; 619.2, 573.2 in EtOH (155); cf. (5).

asym.-Diethylthionine chloride: 641, 590.9 in H_2O ; 633.7, 582 in EtOH (155); cf. (181).

Tetramethylthionine chloride (Methylene Blue, C. I. 922): 667.5, 608.4 in H_2O ; 657.4, 602.1 in EtOH (155); ultra-violet bands, 290, 243 in EtOH (302); influence of temp. (57, 426); influence of acidity (276, 309); influence of concn. and solvent (269, 276); lakes (265); dyeings (522); solid dye (269); dye base, 527 in $CHCl_3$ (677); cf. (5, 161q, 277q, 299q, 307, 581).

$C_{16}H_{19}N_4S(I)$.—Aminomethylene blue iodide: 647.5, 578 in AmOH (180); cf. (309).

$C_{17}H_{20}N_3S(Cl)$.—Trimethylethylthionine chloride (C. I. 926): 668.5, 609.9 in H_2O ; 658.1, 603 in EtOH (155).

Diethylmethylthionine chloride: 655, 600.2 in H_2O ; 645.1, 590.9 in EtOH (155).

Diethylaminophenoamino-*o*-tolazthionium chloride: 643.2, 593.5 in H_2O ; 634.7, 583.2 in EtOH (155).

Diethylaminophenoamino-*m*-tolazthionium chloride: 630, 582 in H_2O ; 630.1, 607.5, 582 in EtOH (155).

$C_{18}H_{13}N_2S(Cl)$.—3-Phenylaminodiphenazthionium chloride: 592, (428) in H_2O (529); 626, 572, 290 in acid EtOH (311).

$C_{18}H_{14}N_3S(NO_3)$.—Phenylthionine nitrate: 625, 290 in acid EtOH (302).

$C_{18}H_{22}N_3S(Cl)$.—Triethylthionine chloride: 655.9, 601.6 in H_2O ; 646.5, 592.2 in EtOH (155).

sym.-Diethyldimethylthionine chloride: 672.2 in H_2O ; 659.9 in EtOH; 658.9 in $CHCl_3$; 668.5 in CS_2 ; influence of temp. (57).

asym.-Diethyldimethylthionine chloride: 670, 611.4 in H_2O ; 659.2, 604.1 in EtOH (155); influence of temp. (57); cf. (5).

Diethyldiaminodi-*o*-tolazthionium chloride (C. I. 927): New Methylene Blue, 575 in H_2O (concd.), 630 (dil.) (269); on cotton, 610 (627).

$C_{19}H_{16}N_2S(Br)$.—3-Phenylmethylaminodiphenazthionium bromide: 637, 607, (539), 296 in acid EtOH (311).

$C_{19}H_{16}N_3S(Cl)$.—*asym.*-Phenylmethylthionine chloride: 627, 288 in acid EtOH (302).

$C_{19}H_{24}N_3S(Cl)$.—Methyltriethylthionine chloride: 671.5, 612.9 in H_2O ; 660.2, 604.7 in EtOH (155).

Diethylaminophenoethylamino-*o*-tolazthionium chloride: 658.9, 605.8 in H_2O ; 647.2, 592.7 in EtOH (155).

$C_{20}H_{26}BrN_3S(Br)$.—Bromotetraethylthionine bromide: 670, 624 in H_2O ; 676, 614.8 with KOH (181).

$C_{20}H_{26}N_4O_2S(Br)$.—Nitrotetraethylthionine bromide: 639.7 in H_2O ; 672 in EtOH (181).

$C_{20}H_{26}N_3S(Cl)$.—Tetraethylthionine chloride: 673, 614.3 in H_2O ; 661.1, 605.5 in EtOH (155); 664.7 in $CHCl_3$; 667.4 in CS_2 ; influence of temp. (57).

$C_{20}H_{27}N_4S(Br)$.—Aminotetraethylthionine bromide: 623.8 in EtOH (181).

$C_{21}H_{20}N_3S(NO_3)$.—Phenyltrimethylthionine nitrate: 645, 290 in EtOH (302).

$C_{24}H_{18}N_3S(Cl)$.—*sym.*-Diphenylthionine chloride: 700, 290 in acid EtOH (302).

$C_{26}H_{22}N_3S(Cl)$.—*sym.*-Diphenyldimethylthionine chloride: 670, 290 (302).

$C_{28}H_{26}N_7S(OH)$.—Thioninedisazo-*bis*-dimethylaniline: 505 (111).

"Methylene Azure." (42, 57, 581).

TABLE 10.—ANTHRAQUINONE DERIVATIVES

Abbreviations: S. B. A. = sulfuric-boric acid; B. A. A. = boric acid-acetic anhydride

$C_{14}H_5Br_3O_5$.—Tribromoflavopurpurin: 537.4, 498.4 in dil. H_2SO_4 (350).

$C_{14}H_5Br_3O_6$.—Tribromohydroxyanthrapurpurin: 570, 532 in alk. H_2O ; 548, 506, 474 in H_2SO_4 ; 557, 516 in S. B. A. (101).

$C_{14}H_6Br_2O_4$.—Dibromoquinizarin: 605, 570 in dil. KOH; 555, 518 in H_2SO_4 (107); 578, 534 in B. A. A. (103).

$C_{14}H_7BrO_4$.—3-Bromoalizarin: 515, 481.5 in H_2SO_4 (350). 2-Bromoquinizarin: 603, 565 in dil. KOH; 553, 515 in H_2SO_4 (107); 570, 530 in B. A. A. (103).

$C_{14}H_7BrO_6$.—Bromopurpurin: 524.7, 492.4 in H_2SO_4 (350).

$C_{14}H_7ClO_4$.—2-Chloroquinizarin: 565, 528 in B. A. A. (103); 601 in alk. H_2O (467).

$C_{14}H_7FO_4$.—2-Fluoroquinizarin: 560, 522 in B. A. A. (103).

$C_{14}H_7NO_6$.—3-Nitroalizarin (C. I. 1033): 518.3, 490.4 in H_2SO_4 (350); 577.7, 533.7, 494 in alk. H_2O (155).

4-Nitroalizarin (C. I. 1031): 601.9, 557, 519.5 in alk. H_2O ; 564.7, 525.8 in EtOH (609.6, 564.7, 526.7 with alkali) (155).

$C_{14}H_7NO_7$.—Nitroflavopurpurin: 525.1, 493.4 in dil. H_2SO_4 (350).

$C_{14}H_8O_2$.—Anthraquinone: 412, 310, 265 in H_2SO_4 (443).

$C_{14}H_8O_3$.—1-Hydroxyanthraquinone: 570.4, 522.9, 495 in $CHCl_3$; 570, 515.9, 495 in EtOH; 551.6 in H_2SO_4 (350); 475, 305, 262 in H_2SO_4 (443); 500, 480 with excess alkali (474); cf. (431, 457).

2-Hydroxyanthraquinone: 500, 410, 320, 288 in H_2SO_4 ; alkali salt, 492, 300, 238 in H_2O (443); 495, 470 with excess alkali (474); cf. (457).

$C_{14}H_8O_4$.—1, 2, Dihydroxyanthraquinone (Alizarin, C. I. 1027): in H_2SO_4 , 605.4, 493.1 (351); (540.5), 497, 464 (155); 625, 501, 316, 270 (443); cf. (350, 379, 430); in S. B. A. (617.5), (569.5), 500, 466.3 (155); in EtOH, 455, (286), 247 (394); with excess alkali in H_2O , 610.8, 566.5, 527.6; in EtOH, 624.9, 578.2, 537.1 (155); cf. (443, 474); alkali salt, 527, 330, 260; on mordants, Sn, 473, Al, 507, Cr, 528 (431); absorption in solid and vapor form (336).

1, 4-Dihydroxyanthraquinone (Quinizarin, C. I. 1028): in EtOH, 516, 502.1, 484.4, 468.8, 453.9 (155); cf. (430, 431); 314, 279, 244 (394); in H_2SO_4 , 548.3, 509.6, 476.4 (155); cf. (351, 379, 430); 325, 272 (443); in S. B. A., 547.5, 508.8, 475.5 (155); in B. A. A., 558, 520 (103); cf. (105); in vapor form, 513.7, 504, 492.6, 481.5, 473.6, 463.5 (430); with excess alkali in EtOH, 608.1, 565.4, 529.4; in H_2O , 596.1, 553.7, 517.7 (155); cf. (430, 431, 443, 474); on mordants, Sn, (546), 492, Al, 575, 528, Cr, 587, (537) (431).

1, 5-Dihydroxyanthraquinone (Anthrarufin, C. I. 1029): in H_2SO_4 , 570.7, 557.7, 528.5, 517.7, 487.1 (155); cf. (350); 320, 272 (443); in S. B. A., 570.7, 550, 528.2, 515.2, 491.3, (459.5) (155); in B. A. A., 570, 527 (105); with excess alkali, 500, 470 (474); cf. (443).

1, 7-Dihydroxyanthraquinone: 501.4 in H_2SO_4 (350).

1, 8-Dihydroxyanthraquinone (Chrysazin, C. I. 1030): 533, 495.6, 465.9 in H_2SO_4 ; 533.9, 496.5, 466.9 in S. B. A. (155); 597.9, 538 (350).

2, 3-Dihydroxyanthraquinone (Hystazarin): 619.8, 587.4 in dil. NaOH (351).

2, 6-Dihydroxyanthraquinone (Anthraflavin): 495, 462.6 in H_2SO_4 (351); cf. (350, 379); 293 (443); alkali salt, 500, 406, 338, 290 in H_2O (443); with excess alkali, 485, 480, 400 (474).

$C_{14}H_8O_4$.—2, 7-Dihydroxyanthraquinone (Isoanthraflavin): 539.7, 493.6 in H_2SO_4 (350); cf. (379); 303 (443); alkali salt, 505, 394, 343, 305 in H_2O (443); with excess alkali, 500, 475, 390 (474).

$C_{14}H_8O_5$.—1, 2, 3-Trihydroxyanthraquinone (Anthragallol, C. I. 1035): in H_2SO_4 , 575, 525.6, 486.4, 456.6 (155); cf. (156, 350, 379, 430); also 291 (443); in S. B. A., 522.5, 486.5, 455 (band at 578 due to by-product) (156); alkali salt (620), 509, 428, 288 (443).

1, 2, 4-Trihydroxyanthraquinone (Purpurin, C. I. 1037): in H_2SO_4 , 559.9, 520.4, 489.2 (155); cf. (350, 430); (320), 280 (443); in S. B. A., 559.9, 520.4, 489.2 (155); in EtOH, 521.1, 485.5, 455.5 (155); cf. (430, 431); in vapor form, 525.6, 504.5 (430); alkali salt, 546.7, 508.9, 477.7 (155); cf. (430, 431); 275 (443); in alk. EtOH, 550.7, 512.8, 481.5 (155); on mordants: Sn, 538, 512, Al, 553, 520, Cr, 564, 530 (431).

1, 2, 5-Trihydroxyanthraquinone (Brilliant Alizarin Bordeaux R, C. I. 1038): in H_2SO_4 , 640, 573.2, 530, 501 (430); cf. (155, 350); in S. B. A., 640.4, 587, 512.8 (155); in EtOH, (523.8), 470; in vapor form, 513.5, 505, 489.6, 480.5, 469.3 (430); with excess alkali, 619.5, 573.2, 533.5 in H_2O ; 631.5, 583, 541.1 in EtOH (155); cf. (430).

1, 2, 6-Trihydroxyanthraquinone (Flavopurpurin, C. I. 1039): in H_2SO_4 , 531.2, 490.2, 457.8 (155); cf. (351); in dil. H_2SO_4 , 533.5, 495.4 (350); cf. (379); in S. B. A., 534.8, 492.3, (456.6) (155); in excess alkali, 594.8, 551, 512.8 in H_2O (155); cf. (351); 601, 557, 518.5 in EtOH (351).

1, 2, 7-Trihydroxyanthraquinone (Anthrapurpurin, C. I. 1040): in H_2SO_4 , 548.5, 508.8, 478.3 (155); cf. (350); in S. B. A., 687, 512.6, 479.3, 448.9; with excess alkali, 605.8, 561.8, 523 in H_2O ; 610.8, 567, 527.6 in EtOH (155).

1, 2, 8-Trihydroxyanthraquinone: in H_2SO_4 , 549.5, 510, 478.3; in S. B. A., 594.3, 548.9, 514.4; in alk. H_2O , 618, 570.7, 534, 498.5; in alk. EtOH, 631.1, 583, 540.5, 505.5 (155).

1, 4, 5-Trihydroxyanthraquinone: 584.2, 539.1, 497.7 in H_2SO_4 ; 595.6, 550.5, 511.3 in S. B. A.; 526.7, 512.8, 492.5, 478.9, 462 in EtOH (611.7, 560.7, 521.3 with alkali); 598.8, 553.7, 516.3 in alk. H_2O (155).

1, 4, 6-Trihydroxyanthraquinone: 587, 554, 515 in H_2SO_4 ; 561, 513 in S. B. A.; 591, 553 in alk. H_2O (101).

$C_{14}H_8O_5S$.—1-Sulfoanthraquinone: 385, 340 in alk. H_2O (474).

$C_{14}H_8O_6$.—1, 2, 5, 8-Tetrahydroxyanthraquinone (Quinalizarin, C. I. 1045): 637.7, 573.2, 530.3, 492 in H_2SO_4 ; 635.4, 590.9 in S. B. A.; 530.7, 517.0, 490.2, 461.4 in EtOH; (649.7, 634.1), 590.1, 546.5 with alkali; 587.0, 543.5, (506.4) in alk. H_2O (155); cf. (350, 431); on mordants: Sn, 510; Al, 542; Cr, 548 (431).

Oxyflavopurpurin; 523, 490 in H_2SO_4 ; 534, 494 in S. B. A.; 541, 501 in alk. H_2O (101).

Oxyanthrapurpurin; 587, 534, 500, 467 in H_2SO_4 ; 590, 489, 469 in S. B. A.; 561, 521, 489 in alk. H_2O (101).

1, 3, 5, 7-Tetrahydroxyanthraquinone (Anthrachrysone): 508.3, 471.7 in H_2SO_4 (350).

1, 4, 5, 8-Tetrahydroxyanthraquinone: 636.4, 617.1, 584.2, 539.9, 526.2 in H_2SO_4 ; 637.7, 618.3, 585.5, 568.7, 541.1, 527.4 in S. B. A.; 568, 543.9, 519.7, 507.1, 485.6, 475.1 in EtOH; 620.7, 574, 533.9 in alk. H_2O (155).

2, 4, 6, 8-Tetrahydroxyanthraquinone: 504.8, 472 in H_2O ; 512.8, 478.3 in S. B. A.; 449.5 in EtOH; (541) in alk. H_2O (155).

$C_{14}H_8O_7$.—1, 2, 4, 5, 8-Pentahydroxyanthraquinone (Alizarin Cyanin, C. I. 1050): 633.2, 583, 538.5 in H_2SO_4 ; 629.8, 577, 532.5 in S. B. A.; 559.2, 545.3, 520.2, 507.7, 485.9, 475.5 in EtOH (587, 543.9, 507.4 with alkali); 581.7, 538.7, 520.4 in alk. H_2O (155); on mordants: Sn, 555; Al, 584; Cr, 592 (431); in organic solvents (430).

$C_{14}H_8O_8$.—1, 2, 3, 5, 6, 7-Hexahydroxyanthraquinone (Rufigallol, C. I. 1052): 576.5, 531.9 in H_2SO_4 (351); cf. (350, 379); 572.5, 530.3, 457, (432) in H_2SO_4 ; 576.2, 534 in S. B. A. (155); 443 in EtOH (431); on mordants: Sn, 478; Al, 496; Cr, 510 (431).

1, 2, 4, 5, 6, 8-Hexahydroxyanthraquinone (C. I. 1062): 608, 588.3, 555.9, 542.5, 513.6 in H_2SO_4 ; 599.7, 550.7, 506.4 in S. B. A.; 546.3, 533.5, 521.3, 508.7, 496.9, 486.7, 475.9, 465.5 in EtOH (155).

1, 2, 4, 5, 7, 8-Hexahydroxyanthraquinone (C. I. 1064): (661.5), 584.3, 540.5, 502.4 in H_2SO_4 ; 649.5, 593.5, 546.5, 506.4 in S. B. A.; (611), 568.2, 550.5, 527.8, 512, 492.3, 480 in EtOH (155).

1, 3, 4, 5, 7, 8-Hexahydroxyanthraquinone: (675), 604.4, 556.4, 519 in H_2SO_4 ; 565.5, 548.7, 534.8, 508.9, 499.5, (487.5) in EtOH (430); cf. (431); on mordants: Sn, 550; Al, 592; Cr, 600 (431).

$C_{14}H_8O_8S_2$.—1, 5-Disulfoanthraquinone: 420, 333 in alk. H_2O (474).

$C_{14}H_9NO_3$.—1-Hydroxy-4-aminoanthraquinone: 562.5, 522.2 in H_2SO_4 ; 571.2, 528.3, 486, 455 in S. B. A.; 570.2, 529.4, 493 in EtOH (602.7, 559.4, 521.7 with alkali); 590.7, 548.5, 511.2 in alk. H_2O (155).

$C_{14}H_9NO_4$.—1, 2-Dihydroxy-4-aminoanthraquinone (C. I. 1032): 560.3, 515.2, 485 in H_2SO_4 ; 569.5, 526.7, 489 in S. B. A.; 564, 523.5, 488.5 in EtOH (567.7, 527.6, 491.7 with alkali); 559.2, 519.9, 486.4 in alk. H_2O (155); (531.3, 495.2 in H_2SO_4 (350)).

394, 343, 305 1, 2-Dihydroxy-3-aminoanthraquinone: 540.3, 499.4 in H_2SO_4 (350).

2, 4-Dihydroxy-1-aminoanthraquinone: 550.9, 510.5, 480.5, 450 in H_2SO_4 ; 552.6, 511.7, 477, 448 in S. B. A.; 552.8, 515.2, 482.5 in EtOH (555.5, 520.6, 487.8 with alkali); 545.9, 510.4, 480.7 in alk. H_2O (155).

$C_{14}H_{10}N_2O_2$.—1, 4-Diaminoanthraquinone (584.5, 568.2), (537.3, 526.7), (497, 492.4) in S. B. A.; 595.6, 551.3, 512.7 in EtOH (155).

$C_{14}H_{10}N_2O_4$.—1, 5-Dihydroxy-4, 8-diaminoanthraquinone: 617.7, 568, 523 in H_2SO_4 ; (626.1, 609.9), (577.7, 562.9), (536, 524), in EtOH (641.4, 591, 547.5 with alkali) (155).

$C_{14}H_{12}N_4O_2$.—1, 4, 5, 8-Tetraaminoanthraquinone: 576, 531.5, 507.5 in S. B. A.; 638.7, 590.4, 549.3 in EtOH (625.5, 578.2, 536.6 with acid) (155).

$C_{14}H_7Br_3O_6$.—Tribromococcin: 556, 514, 482 in H_2SO_4 ; 570, 528 in S. B. A.; 581, 538 in alk. H_2O (101).

$C_{14}H_8O_7$.—Purpurincarboxylic acid (pseudopurpurin): 563.5, 520.8, 489.8 in H_2SO_4 (350).

$C_{14}H_9BrO_6$.—2-Methoxy-3-bromoquinizarin: 520, 485 in H_2SO_4 ; 540, 505 in S. B. A.; 540, 505 in dil. KOH (107).

$C_{14}H_{10}O_3$.—1-Hydroxy-4-methylantraquinone: 555.2 in H_2SO_4 ; 523.5 in $CHCl_3$ (350).

$C_{14}H_{10}O_4$.—1, 8-Dihydroxy-3-methylantraquinone: 604.8, 534.4, 499.2 in H_2SO_4 (350).

$C_{14}H_{10}O_5$.—Methylhydroxyalazarin: 607.2, 569.4, (519.7) in H_2SO_4 (350).

α -Methylantragallol: 541.5, 502.4 in H_2SO_4 (350).

1, 4, 6-Trihydroxy-8-methylantraquinone: 580, 524, 486 in H_2SO_4 ; 579, 527, 486 in S. B. A.; 595, 532 in alk. H_2O (101).

1, 5, 8-Trihydroxy-2-methylantraquinone: 459 in EtOH + HCl; 517 in EtOH + NaOH (195).

1, 5, 8-Trihydroxy-3-methylantraquinone: 487 in EtOH + HCl; 557 in EtOH + NaOH (195).

1, 5, 8-Trihydroxy-4-methylantraquinone: 478 in EtOH + HCl; 520 in EtOH + NaOH (195).

2, 5, 8-Trihydroxy-1-methylantraquinone: 468 in EtOH + HCl; 532 in EtOH + NaOH (195).

$C_{14}H_{10}O_6$.—Methyltetrahydroxyanthraquinone: 540, 501 in H_2SO_4 ; 546, 503 in S. B. A.; 539, 501 in alk. H_2O (101).

$C_{14}H_{12}O_4$.—Dimethylanthrurufin: 569.4, 520.8 in H_2SO_4 (350). Alizarin dimethyl ether: 597.6, 487.5 in H_2SO_4 (351); cf. (379).

Quinizarin dimethyl ether: 564.4, 519.8, (484.3) in H_2SO_4 ; 577.4, 535.4, 494.1 in neutral soln. (351); cf. (379).

Anthraflavin dimethyl ether: 501.5, 472.6, (436.9) in H_2SO_4 (351); cf. (379).

$C_{14}H_{12}O_6$.—Dimethylantragallol: 544.3, 507.5 in H_2SO_4 (350). Anthragallol ethyl ether: 515 in H_2SO_4 (351); cf. (379).

C₁₆H₁₂O₆.—Dimethyltetrahydroxyanthraquinone (probably 1, 5-dimethylanthrachrysone): 635.3, 617.8, 582.4, 540.3 in H₂SO₄ (350).

C₁₆H₁₄N₂O₂.—1, 4-Dimethylaminoanthraquinone: (624.9, 602.5), (572.0, 552.8), (526.7, 509.6) in S. B. A.; 644.5, 595.1, 550.5 in EtOH (155).

C₁₇H₉NO₄.—1, 2-Dihydroxyanthraquinone- α -quinoline (C. I. 1068): 597.7, 551.5, 516.8, 487.8 in H₂SO₄; 660, 603 in S. B. A.; 588.8, 545.5, 507.2 in EtOH; 578.3, 535.3, 497.3 in H₂O; 567.5, 526.9, 491.9 in alk. H₂O; 576, 530.5, 494.7 in alk. EtOH (155).

1, 2-Dihydroxyanthraquinone- β -quinoline (C. I. 1066): 604.4, 560.7, 524, 492.7 in H₂SO₄; 578 in S. B. A.; 675, 617.7, (579.5) in alk. H₂O; 690.6, 632.1, 580.7 in alk. EtOH (155). Alizarin Blue: on wool (10); infra-red bands at 0.8 and 1.0 μ with strong band at 0.5 μ in EtOH (388).

C₁₇H₁₄O₆.—Trimethylanthragalol: 554.1, 507.5 in H₂SO₄ (350).

1-Hydroxy-2-methyl-5, 8-dimethoxyanthraquinone: 460 in EtOH + HCl; 507 in EtOH + NaOH (195).

1-Hydroxy-3-methyl-5, 8-dimethoxyanthraquinone: 473 in EtOH + HCl; 525 in EtOH + NaOH (195).

1-Hydroxy-4-methyl-5, 8-dimethoxyanthraquinone: 467 in EtOH + HCl; 506 in EtOH + NaOH (195).

C₁₈H₁₆O₄.—Quinizarin diethyl ether: 577, 535, (494) in H₂SO₄ (379).

Anthraflavin diethyl ether: 504.5, 477.5, (439.8) in H₂SO₄ (351); cf. (379).

Isoanthraflavin diethyl ether: 505.1, 492.3 in H₂SO₄ (351); cf. (379).

C₁₈H₁₆O₆.—Anthragallol diethyl ether: 515 in H₂SO₄ (379).

Anthrapurpurin diethyl ether: 508.1 in H₂SO₄ (351).

Flavopurpurin diethyl ether: 542.3, 501.5 in H₂SO₄ (351); cf. (379).

C₁₈H₈N₂O₇.—1-Hydroxy-2, 6-dinitronaphthacenequinone: 416 in EtOH (521, 408 with NaOEt) (41).

C₁₈H₉ClO₃.—1-Chloro-6-hydroxynaphthacenequinone: 571, 523, 304 in S. B. A.; 458, 250 in EtOH (510, 402, 261 with NaOEt) (41).

C₁₈H₁₀O₃.—1-Hydroxynaphthacenequinone: 571, 324 in S. B. A.; 455, 249 in EtOH (526, 263 with NaOEt) (41).

C₁₈H₁₀O₄.—1, 6-Dihydroxynaphthacenequinone: 540, 492, 463, 331, 294 in S. B. A.; 488, 260 in EtOH (555, 265 with NaOEt) (41).

1, 7-Dihydroxynaphthacenequinone: 613, 571, 297 in S. B. A.; 476 in EtOH (488, 250 with NaOEt) (41).

1, 8-Dihydroxynaphthacenequinone: 571, 323 in S. B. A.; 454, 291 in EtOH (508, 472, 250 with NaOEt) (41).

C₁₈H₁₀O₅.—1, 2, 6-Trihydroxynaphthacenequinone: 570, 326 in S. B. A.; 488, 280 in EtOH (513 with NaOEt) (41).

C₁₈H₁₀O₇S.—1, 5-Dihydroxynaphthacenequinone-4 (?)—sulfonic acid: 610, 571, 300 in S. B. A.; 488, 260 in EtOH (588 with NaOEt) (41).

C₁₈H₁₁NO₃.—1-Amino-6-hydroxynaphthacenequinone: 541, 508, 292 in S. B. A.; 556, 510, 481, 264 in EtOH (562, 264 with NaOEt) (41).

C₁₈H₁₁NO₄.—1-Amino-6, 8-dihydroxynaphthacenequinone: 571, 293 in S. B. A.; 556, 513, 477 in EtOH (588, 250 with NaOEt) (41).

C₁₉H₁₂O₄.—1-Hydroxy-5-methoxynaphthacenequinone: 700, 300 in S. B. A.; 481, 252 in EtOH (530, 261 with NaOEt) (41).

1-Hydroxy-8-methoxynaphthacenequinone: 571, 327 in S. B. A.; 467, 290 in EtOH (532, 260 with NaOEt) (41).

C₂₀H₁₃NO₃.—1-Hydroxy-4-phenylaminoanthraquinone: 585, 540.5 in H₂SO₄; 692.7, 546.5, 506.4 in S. B. A.; 588.6, 546.5, 508.3 in EtOH; 631.5, 583.2, 541.1 in alk. EtOH (155).

C₂₀H₂₀O₅.—Flavopurpurin triethyl ether: 535.3, (489.5), 468.4 in H₂SO₄ (351).

C₂₀H₂₀O₈.—Rufigallol triethyl ether: 579, 544.6 in H₂SO₄ (351); cf. (379).

C₂₁H₁₃NO₄.—1-Benzoylamino-4-hydroxyanthraquinone (Algol Pink R, C. I. 1128): 577, 534.5, 489.5 in H₂SO₄ (190); cf. (116); 538, 496 in C₉H₇N (116).

C₂₁H₁₃NO₆.—1-Benzoylamino-4, 5, 8-trihydroxyanthraquinone (Algol Violet B, C. I. 1130): 656, 603, 529, 495 in H₂SO₄; 637, 559, 523 in C₉H₇N (116); 600, 575 on cotton (522).

C₂₁H₁₄N₂O₃.— α -Benzoylhydrazinoanthraquinone: 540, 500, 300, 264 in H₂SO₄ (560, 530 on adding H₃BO₃) (39).

β -Benzoylhydrazinoanthraquinone: 504, 400, 303, 254 in H₂SO₄ (39).

C₂₁H₁₅NO₃.—1-Hydroxy-4-*o*-tolylaminoanthraquinone: 586.5, 541.5 in H₂SO₄; 591.5, 545.3, 505 in S. B. A.; 583.5, 542, 504 in EtOH (628.2, 579.5, 538 with alkali) (155).

1-Hydroxy-4-*p*-tolylaminoanthraquinone: 587, 542.5 in H₂SO₄; 592.2, 545.9, 505.6 in S. B. A.; 587.5, 546.5, (509) in EtOH (632.4, 583.3, 541.5 with alkali) (155).

C₂₂H₁₄O₆.—1, 8-Diacetoxynaphthacenequinone: 571, 328 in S. B. A.; 400 in EtOH (476, 382 with NaOEt) (41).

C₂₂H₁₅NO₄.—1-Benzoylamino-4-methoxyanthraquinone (Algol Scarlet G, C. I. 1129): 490, 460 in C₉H₇N; 597, 530, 500 in H₂SO₄ (116).

C₂₄H₁₄N₂O₅.—1-Hydroxy-2 (?)—nitro-6 (?)—anilinonaphthacenequinone: 588, 297 in S. B. A.; 610, 575 in EtOH (606 with NaOEt) (41).

C₂₄H₁₅NO₃.—1-Anilino-6-hydroxynaphthacenequinone: 556, 293 in S. B. A.; 526 in EtOH (613, 568 with NaOEt) (41).

C₂₆H₁₈N₂O₂.—1, 4-Dianilinoanthraquinone: 633.4, 577.5, 533 in H₂SO₄; 521.7, (483) in S. B. A.; 642.4, 589.6, 545.5 in EtOH (155).

1, 5-Dianilinoanthraquinone: 533 in solid form; 482 in vapor form (340 $^{\circ}$) (336).

C₂₈H₈Cl₄O₂.—4, 5, 4', 5'-Tetrachloro-*meso*-naphthodianthrone: 610, (564), 518 in H₂SO₄ (113); cf. (437).

C₂₈H₁₀Br₂O₂.—3, 3'-Dibromo-*meso*-naphthodianthrone: 550 in H₂SO₄ (113).

C₂₈H₁₀Cl₂O₂.—3, 3'-Dichloro-*meso*-naphthodianthrone: 254 in H₂SO₄ (113).

4, 4'-Dichloro-*meso*-naphthodianthrone: 591, 521 in H₂SO₄ (113).

C₂₈H₁₂Br₂O₂.—3, 3'-Dibromo-*meso*-benzodianthrone: 640 in H₂SO₄ (113).

C₂₈H₁₂Cl₂O₂.—3, 3'-Dichloro-*meso*-benzodianthrone: 645 in H₂SO₄ (113).

C₂₈H₁₂Cl₄O₂.—1, 5, 1', 5'-Tetrachlorodianthrone: 546 in H₂SO₄ (113).

4, 5, 4', 5'-Tetrachlorodianthrone: 567 in H₂SO₄ (113).

1, 4, 1', 4'-Tetrachlorodianthrone: 546 in H₂SO₄ (113).

C₂₈H₁₂O₂.—*meso*-Naphthodianthrone: 569, 511 in H₂SO₄ (113).

C₂₈H₁₂N₂O₂.—Indanthrene Yellow G (C. I. 1118): 484, 454 in C₉H₇N; 510, 479, 453 in H₂SO₄ (116).

C₂₈H₁₄Cl₂O₂.—3, 3'-Dichlorodianthrone: 546, 450 in H₂SO₄ (113).

4, 4'-Dichlorodianthrone: 630, 584 in H₂SO₄ (113).

C₂₈H₁₅NO₄.— α , β -Dianthraquinonylamine (Algol Orange R, C. I. 1137): 496 in C₉H₇N (116).

C₂₈H₁₆O₂ (?)—Helianthrone: 618, (590) in H₂SO₄ (437).

Dianthrone: 558, (530) in H₂SO₄ (437).

C₂₈H₁₈N₂O₄.—1, 4-Dibenzoyldiaminoanthraquinone (Algol Red 5G, C. I. 1131): 541, 502 in C₉H₇N; 571, 530, 491 in H₂SO₄ (116).

C₂₈H₁₈N₂O₅.—1, 5-Dibenzoyldiamino-8-hydroxyanthraquinone (Algol Red R, C. I. 1133): 560.2, (521.4), 488.4 in S. B. A. (190); 562, 524, 492 in C₉H₇N; 610, 568, 526 in H₂SO₄ (116).

C₂₈H₂₂N₂O₅S.—1-*p*-Toluido-4-*o*-sulfo-*p*-toluidoanthraquinone: 649.7, 591 in H₂SO₄; 643.8, 586.5, 540.3, 500, 469.5 in S. B. A.; 650.7, 596.1, 552.2 in EtOH (155).

$C_{28}H_{22}N_2O_2$.—1, 4-Di-*o*-toluidoanthraquinone: 634.4, 578.2, 533.4 in H_2SO_4 ; (618, 600.2), (567, 551.5), (523, 512.8) in S. B. A.; 638.7, 585.7, 543.1 in EtOH (155).

1, 4-Di-*p*-toluidoanthraquinone: 632.7, 578.2, 533 in H_2SO_4 ; 618.3, 567, 522.4 in S. B. A.; 644.1, 590.9, 546.5 in EtOH (155).

1, 5-Di-*p*-toluidoanthraquinone: 482 in vapor form (370°) (336).

$C_{28}H_{16}N_2O_5$.—1, 1'-Dianthraquinonylurea: 265 in H_2SO_4 (40).

1, 2'-Dianthraquinonylurea: 260 in H_2SO_4 (40).

2, 2'-Dianthraquinonylurea (C. I. 1138): 410, 270 in H_2SO_4 (40).

$C_{30}H_{12}Br_2O_2$.—Dibromopyranthrene (Indanthrene Scarlet G, C. I. 1098): 509, 478, 449 in C_9H_7N ; 538 in H_2SO_4 (116).

$C_{30}H_{14}O_2$.—Pyranthrene (Indanthrene Gold Orange G, C. I. 1096): 486 in C_9H_7N ; 620, 575, 545, 504 in H_2SO_4 (116); 544.3, 503.5 in vat (190).

$C_{30}H_{16}O_4$.—2, 2'-Dianthraquinonylethylene (Anthraflavone, C. I. 1095): 581, 548 in H_2SO_4 (116).

$C_{30}H_{18}N_2O_4$.—*N*-Dimethylindanthrene (C. I. 1108): Algol Blue K, 700 in xylene (190).

$C_{30}H_{28}N_4O_2$.—Tetramethyl-*p*-diamino-1, 4-dianilinoanthraquinone: 628.8, 575, 530.7 in H_2SO_4 ; 619.5, 568.2, 524 in S. B. A. (155).

$C_{31}H_{18}N_2O_4$.— β -Anthraquinone- α -anthra-*N*-methylpyridone-amine (Algol Red B, C. I. 1155): 555, 521, 488 in C_9H_7N ; 530, 493, 460 in H_2SO_4 (116); 524.8, 490.5, 457.8 in S. B. A. (190).

$C_{34}H_{14}Cl_2O_2$.—Dichloroisoviolanthrone (C. I. 1104): Indanthrene Violet 2R, 594, 545, 505 in C_9H_7N (116).

$C_{34}H_{16}O_2$.—Violanthrone (Indanthrene Dark Blue BO, C. I. 1099): 578.3, 535.6, 500.8 in vat (190); Violanthrene B, 618, 568, 523, 488 in C_9H_7N ; 575, 531, 524 in H_2SO_4 (116).

Isoviolanthrone (Indanthrene Violet R, C. I. 1103): 603, 555, 516, 482 in C_9H_7N ; 520, 490 in H_2SO_4 (116).

$C_{42}H_{20}Cl_2N_2O_6$.—Dichloro-di- α -anthraquinonyl-2, 7-diaminoanthraquinone (Indanthrene Bordeaux B, C. I. 1143): 540, 500 in C_9H_7N ; 580 in H_2SO_4 (116).

$C_{42}H_{22}N_2O_6$.—Di- α -anthraquinonyl-2, 6-diaminoanthraquinone (Indanthrene Red G, C. I. 1140): 641, 587, 543.2, 497.7 in H_2SO_4 (190); 530, 500 in C_9H_7N (116).

2, 7-Di- α -anthraquinonyldiaminoanthraquinone (Indanthrene Red R, C. I. 1142): 520, 500 in C_9H_7N (116); 525 on cotton (522).

$C_{44}H_{26}N_2O_8$.—4, 4'-Dimethoxy-di- α -anthraquinonyl-2, 6-diaminoanthraquinone (Algol Bordeaux 3B, C. I. 1141): 668, 540, 500 in C_9H_7N ; 606, 572 in H_2SO_4 (116); 608.5, 538.5 in S. B. A. (190).

Algol Brown B (C. I. 1166): 581, 536 in C_9H_7N (113).

Algol Corinth (C. I. 1144): 606, 561 in C_9H_7N ; 603, 552 in H_2SO_4 (116).

Algol Gray B (C. I. 1145): 642, 547 in C_9H_7N ; 615, 562 in H_2SO_4 (116).

Alizarin Blue S 5R: 540 in H_2O (concd.), 560 (dil.) (269).

Alizarin Red W: 610, 559, 518 in alk. EtOH (369).

Cibanone Brown B (C. I. 1171): 568, 528, 488 in C_9H_7N ; 581, 543, (493) in H_2SO_4 (116).

Cibanone Brown G: 570, 530, 493 in C_9H_7N ; 581, 530, (490) in H_2SO_4 (116).

Cibanone Yellow R (C. I. 1170): 530.6, 492.6 in H_2SO_4 (190); cf. (116).

Helindone Orange GRN (C. I. 1147): 490 in C_9H_7N (116).

Indanthrene Blue GED: 650 on cotton (522).

Indanthrene Brown B (C. I. 1120): 614, 557 in C_9H_7N (116).

Indanthrene Gray: 530, 490 in C_9H_7N (116).

Indanthrene Maroon R (C. I. 1125): 553, 493 in C_9H_7N (116).

Indanthrene Orange RT (C. I. 1157): 557, 492 in H_2SO_4 (116).

Indanthrene Violet RT (C. I. 1100): 601, 554, 511 in C_9H_7N ; 575, 531, 524 in H_2SO_4 (116); 583.2, 539.7, 500 in xylene (190).

TABLE 11.—INDIGO DERIVATIVES AND RELATED COLORING MATTERS

$C_{13}H_{11}NO_3$.—2-Indole-3-pentanoneindigo: 478 in $CHCl_3$ (254).

$C_{14}H_{10}N_2O_2S_2$.—Disulfurylindigo: 460, 288 in HOAc; 455 in H_2SO_4 (382).

$C_{15}H_{10}N_2O_5S$.—Sulfurylindigo: 456, 254 in EtOH (633, 288 with alkali); 472 in H_2SO_4 (382).

$C_{16}H_2Br_8N_2O_2$.—Octabromoindigo: 611.5 in xylene; 613.5 in tetralin (154).

$C_{16}H_2Cl_8N_2O_2$.—Octachloroindigo: 606.9, 555.4 in xylene; 604.3, 555.2 in methyl benzoate (191); cf. (194).

$C_{16}H_4Br_6N_2O_2$.—4, 5, 7, 4', 5', 7'-Hexabromoindigo: 616.2 in xylene; 623.6 in $CHCl_3$ (189); 619 in tetralin (154).

$C_{16}H_6Br_4N_2O_2$.—4, 5, 7, 5', 7'-Pentabromoindigo: 615 in xylene; 621.3 in $CHCl_3$ (189); 618 in tetralin (154).

$C_{16}H_8Br_2Cl_2N_2O_2$.—5, 5'-Dibromo-4, 4'-dichloroindigo (C. I. 1189): 612.5 in xylene (191); 631.3 in methyl benzoate (194); 615.5 in tetralin (154).

7, 7'-Dibromo-5, 5'-dichloroindigo: 611.5 in xylene; 614.5 in tetralin (154).

$C_{16}H_8Br_2O_2S_2$.—5, 5'-Dibromothioindigo (C. I. 1208): 555.5, 513.8 in xylene (190); 564, 522, 486, 455 in C_9H_7N (116); 559, 515 in tetralin (154).

6, 6'-Dibromothioindigo: 539.5, 498 in xylene; 541.5, 500 in tetralin (154).

$C_{16}H_6Br_3NO_2S$.—2-(5, 7-Dibromoindole)-5'-bromo-2'-thionaphtheneindigo (C. I. 1222): 598, 557 in C_9H_7N ; 550 in H_2SO_4 (116); 590, 545 in xylene; 592.5, 547.5 in tetralin (154).

2-(4, 5, 7-Tribromoindole)-2'-thionaphtheneindigo: 585.5, 539.5 in xylene; 588, 542 in tetralin (154).

$C_{16}H_6Br_4N_2O_2$.—5, 7, 5', 7'-Tetrabromoindigo (C. I. 1184): 623 in $CHCl_3$ (350); 620 in $C_6H_5NO_2$ (87); 613 in xylene; 616 in tetralin (154); cf. (188, 191). (Ciba Blue 2B reported as 653, 600.5 in xylene (190).)

5, 7, 5', 7'-Tetrabromoindirubin (C. I. 1205): 579.5, 537 in xylene (190); 590, 545 in C_9H_7N ; 580 in H_2SO_4 (116); 613 in xylene; 616 in tetralin (154).

$C_{16}H_6Cl_2O_2S_2$.—4, 4'-Dichlorothioindigo: 545, 503 in xylene; 547.5, 505 in tetralin (154).

5, 5'-Dichlorothioindigo (C. I. 1209): 547.3, 504 in xylene (190); 556, 511 in C_9H_7N (116); 550.5, 507.5 in tetralin (154).

6, 6'-Dichlorothioindigo (C. I. 1210): Ciba Red B, 539, 497.5 in xylene; 541, 499.5 in tetralin. Helindone Rose R, 538, 497 in xylene; 540, 499 in tetralin (154).

$C_{16}H_6Cl_4N_2O_2$.—4, 7, 4', 7'-Tetrachloroindigo: 596.7, 546.8 in xylene; 600.6, 551.7 in methyl benzoate (191).

5, 7, 5', 7'-Tetrachloroindigo (C. I. 1190): 609 in xylene; 616.6 in methyl benzoate (191); cf. (194); 615 in $C_6H_5NO_2$ (87); 613.5 in tetralin (154).

$C_{16}H_7Br_2NO_2S$.—2-(5-Bromoindole)-5'-bromo-2'-thionaphtheneindigo (C. I. 1221): 600, 556 in C_9H_7N (116); 589, 544.5 in xylene; 591.5, 547 in tetralin (154); cf. (190).

3-(5, 7-Dibromoindole)-2'-thionaphtheneindigo (C. I. 1226): 543.5, 502 in xylene; 546, 504 in tetralin (154). Thioindigo Scarlet G, 500 in C_9H_7N ; 580, 500 in H_2SO_4 . Ciba Red G, 530, 500 in C_9H_7N (116).

2-(5, 7-Dibromoindole)-2'-thionaphtheneindigo: 584, 539 in xylene; 586.5, 541.5 in tetralin (154).

- $C_{16}H_7Br_3N_2O_2$.—5, 7, 5'-Tribromoindigo: 608.7 in xylene (188); 612.5 in xylene; 615.5 in tetralin (154).
- $C_{16}H_7Br_3N_2O_2S$.—Tribromo-3-indole-2'-(6'-aminothionaphthene)-indigo (Helindone Brown G, C. I. 1227): 540 in H_2SO_4 (116).
- $C_{16}H_5BrNO_2S$.—2-(5-Bromoindole)-2'-thionaphtheneindigo (C. I. 1220): 582.5, 538.5 in xylene; 585, 541 in tetralin (154). (Ciba Grey G, 598, 548 in C_9H_7N (116).)
- $C_{16}H_5Br_2N_2O_2$.—4, 4'-Dibromoindigo: 613 in $C_2H_2Cl_4$ (165).
- 5, 5'-Dibromoindigo: 621 in $C_2H_2Cl_4$ (165); 605.5 in xylene; 609 in tetralin (154); cf. (188, 350).
- 6, 6'-Dibromoindigo: 591.6, 536.5 in xylene; 593.5, 554 in methyl benzoate (191); 585 in $C_2H_2Cl_4$ (165); 592, 550 in tetralin (154); cf. (117, 194).
- 7, 7'-Dibromoindigo: 606 in $C_2H_2Cl_4$ (165).
- 6, 6'-Dibromindirubin: 567, 520 in xylene (118).
- $C_{16}H_5Br_2N_2O_2S_2$.—5, 5'-Dibromo-6, 6'-diaminothioindigo (C. I. 1215): 519, 484 in xylene; 521, 485.5 in tetralin (154).
- $C_{16}H_5Br_4N_4O_2$.—5, 7, 5', 7'-Tetrabromo-6, 6'-diaminoindigo (C. I. 1187): 559, 523 in xylene; 562.5, 526 in tetralin (154); 563.3 in methyl benzoate (194); 585.1 in H_2SO_4 (350).
- $C_{16}H_5Cl_2N_2O_2$.—6, 6'-Dichloroindigo: 558.5, 518.5 in xylene; 561, 521 in tetralin (154).
- $C_{16}H_5I_2N_2O_2$.—6, 6'-Diiodoindigo: 598, 546.5 in xylene; 600.9, 558.1 in methyl benzoate (194).
- $C_{16}H_5N_4O_6$.—5, 5'-Dinitroindigo: 585.5 in $CHCl_3$ (?) (350).
- 6, 6'-Dinitroindigo: 635.5 in xylene; 638 in tetralin (154).
- $C_{16}H_5N_6O_2(Cl)_2$.—Tetrazoindigo chloride: 565, 517 in H_2O (115).
- $C_{16}H_8O_3S_2$.—Thioindigo: 543.5, 502 in xylene; 546, 504 in tetralin (154); 547 in $CHCl_3$ (163); 552, 508 in C_9H_7N (116); 407, 310 in H_2SO_4 (382); cf. (111, 167, 169, 190, 524).
- $C_{16}H_8O_3S_2$.—Hydroxythioindigo: 539, (497.5) in xylene (88).
- Thioindigo sulfoxide: 520 in xylene (524).
- $C_{16}H_8O_4S_2$.—5, 5'-Dihydroxythioindigo: 590 in $C_2H_2Cl_4$ (164).
- 6, 6'-Dihydroxythioindigo: 560, 520 in H_2SO_4 (164).
- Thioindigo sulfone: 500 in xylene (524).
- $C_{16}H_8O_6S_2$.—Trihydroxythioindigo: 487.7 in xylene (88).
- $C_{16}H_9NO_2S$.—2-Indole-2'-thionaphtheneindigo: 575, 531.5 in xylene; 577.5, 533.5 in tetralin (154); 579 in $CHCl_3$ (163); cf. (122).
- 3-Indole-2'-thionaphtheneindigo (C. I. 1225): 544.5, 507 in xylene; 546, 504 in tetralin (154); 510 in C_9H_7N ; 580 in H_2SO_4 (116); cf. (640).
- $C_{16}H_{10}N_2O_2$.—Indigo (C. I. 1177): 630 in $C_6H_5NH_2$ (382); 615.9 in HOAc (117); 604.8 in $CHCl_3$ (350); 590.9 in xylene (117); 601.5 in tetralin (154); 472, 300 in H_2SO_4 (382). (Formánek reports band at 637, Krüss at 605.1); 678 in solid form; 546 in vapor at 320° (336); 650 on cotton (522); cf. (111, 187, 191, 524, 528q, 602q, 669q).
- Indirubin: 561, 522 in xylene; 564, 525 in tetralin (154); 544 in HOAc (641); 568, 534 in C_9H_7N (116); 289 in MeOH (108); 492 in vapor form (305°) (336).
- Isoindigo: 520, 335, 268 in MeOH (108); 477 in HOAc (641).
- $C_{16}H_{10}N_2O_2S_2$.—5, 5'-Diaminothioindigo: 592, 523 (111).
- 7, 7'-Diaminothioindigo (C. I. 1213): 646 in C_9H_7N ; 584, 550 in H_2SO_4 (116).
- $C_{16}H_{10}N_2O_5S$.—Indigo-5-sulfonic acid: K salt, 608 in H_2O ; 615 in 80% EtOH; 525 in solid form (268q).
- $C_{16}H_{10}N_2O_5S_2$.—Indigo-5, 5'-disulfonic acid: K salt, 610 in H_2O ; 610 in 80% EtOH (268q); Na salt (C. I. 1180): 612, 289, 252 in H_2O (179q); cf. (115q, 268q, 299q, 390q, 391q, 422q).
- $C_{16}H_{10}N_2O_{11}S_3$.—Indigo-5, 7, 5'-trisulfonic acid: K salt, 603 in H_2O ; 605 in 80% EtOH; 560 in solid form (268q).
- $C_{16}H_{10}N_2O_{14}S_4$.—Indigo-5, 7, 5', 7'-tetrasulfonic acid: K salt, 590 in H_2O ; 598 in 80% EtOH (268).
- $C_{16}H_{11}N_3O_2$.—5-Aminoindigo: 589 (111).
- $C_{16}H_{12}N_4O_2$.—4, 4'-Diaminoindigo: 594 (111).
- 5, 5'-Diaminoindigo: 588.9 in H_2SO_4 (350); hydrochloride, 623 in H_2O (115).
- $C_{17}H_9NO_3$.—2-Indanone-2'-indoleindigo: 508 in $CHCl_3$ (122).
- $C_{17}H_{10}N_2O_3$.—2-Isoquinolone-2'-indoleindigo: 584 in $CHCl_3$ (122).
- $C_{17}H_{10}N_2O_2S$.—5-Isatiny-3-phenylrhodanic acid: 430 in HOAc (677).
- $C_{17}H_{11}BrN_2O_2$.—5-Bromo-7-methylindirubin (C. I. 1206): 582, 538 in xylene; 585, 541 in tetralin (154).
- $C_{17}H_{11}NO_2$.—2-Indane-2'-indoleindigo: 492 in $CHCl_3$ (122).
- $C_{17}H_{12}N_2O_2$.—N-Methylindigo: 635.5 in xylene; 638.5 in tetralin (154); 639.4 in xylene (117).
- 5-Methylisoindigo: 491 in HOAc (641).
- 7-Methylisoindigo: 489 in HOAc (641).
- 5-Methyl-2-indole-3'-indoleindigo: 535 to 544 in HOAc (641).
- 7-Methyl-2-indole-3'-indoleindigo: 546 in HOAc (641).
- 5-Methyl-3-indole-2'-indoleindigo: 544, 532 in HOAc (641).
- 7-Methyl-3-indole-2'-indoleindigo: 546, 528 in HOAc (641).
- $C_{18}H_8Br_2N_2O_3S$.—2-Naphthsultam-2-(5', 7'-dibromoindole)-indigo: 674, 614 in C_6H_6 (349).
- $C_{18}H_9NO_4S_2$.—2-Thionaphthene-2'-naphthsultamquinoneindigo: 590, 545 in $C_6H_5NO_2$ (168).
- $C_{18}H_{10}Br_2O_2S_2$.—6, 6'-Dibromo-4, 4'-dimethylthioindigo (C. I. 1211): 542.5, 501 in xylene; 545, 503 in tetralin (154).
- $C_{18}H_{10}Cl_2O_2S_2$.—5, 5'-Dichloro-6, 6'-dimethylthioindigo (Helindone Red 3B, C. I. 1212): 562, 520.7 in xylene (190); 575, 530 in C_9H_7N (116); 560, 540 on cotton (522).
- 5, 5'-Dichloro-7, 7'-dimethylthioindigo: 565, 526 in xylene; 567.5, 528 in tetralin (154).
- $C_{18}H_{10}NO_3S$.—2-Naphthsultam-2'-indoleindigo: 655, 605 in EtOH (168); 664, 608 in C_6H_6 ; 665, 609 in $CHCl_3$; 670, 614 in $C_6H_5NO_2$ (349).
- $C_{18}H_{10}N_2O_6$.—Indigodicarboxylic acid: 648.7 in dil. NH_4OH ; 647.9 in dil. $NaOH$; 649.9 in dil. KOH (350).
- $C_{18}H_{10}O_2S_2$.—Dye from oxythionaphthene and glyoxal: 509, 476 in xylene (167).
- $C_{18}H_{11}NO_2$.—2-Naphthalene-2'-indoleindigo: 644, 591 in $CHCl_3$ (163); cf. (122).
- $C_{18}H_{12}Br_2N_2O_2$.—6, 6'-Dibromo-1, 1'-dimethylindigo: 635 in xylene; 638 in tetralin (154); 638 in xylene (117).
- $C_{18}H_{12}Cl_2N_2O_2$.—5, 5'-Dichloro-1, 1'-dimethylindigo: 665 in xylene (117).
- $C_{18}H_{12}N_2O_2$.—Dye from indoxyl and glyoxal: 600, 555 in xylene (167).
- $C_{18}H_{12}N_2O_2S$.—5-Isatiny-3-p-tolylrhodanic acid: 433 in HOAc (677).
- $C_{18}H_{12}O_4S_2$.—4, 4'-Dimethoxythioindigo: 554, 504 in $C_2H_2Cl_4$ (164).
- 5, 5'-Dimethoxythioindigo: 590 in $C_2H_2Cl_4$ (164).
- 6, 6'-Dimethoxythioindigo: 570, 530 in $C_2H_2Cl_4$ (164).
- $C_{18}H_{14}N_2O_2$.—1, 1'-Dimethylindigo: 644.5 in xylene (117); 642 in xylene; 645 in tetralin (154); cf. (166).
- 7, 7'-Dimethylindigo: 603.8 in xylene; 617.7 in HOAc (187); 606.5 in tetralin (154); cf. (350, 524).
- 5, 5'-Dimethylisoindigo: 512 in H_2SO_4 (641).
- 7, 7'-Dimethylisoindigo: 528 in H_2SO_4 (641).
- $C_{18}H_{14}N_2O_4$.—4, 4'-Dimethoxyindigo: 603 in $C_2H_2Cl_4$ (165).
- 5, 5'-Dimethoxyindigo: 644 in $C_2H_2Cl_4$ (165).
- 6, 6'-Dimethoxyindigo: 577 in $C_2H_2Cl_4$ (165).
- 7, 7'-Dimethoxyindigo: 644 in $C_2H_2Cl_4$ (165); 650.8 in $CHCl_3$ (350).
- $C_{18}H_5BrO_2S$.—5-Bromo-2-thionaphthene-2'-acenaphthylenindigo: 520.5, 480.5 in xylene; 533.5, 483.5 in tetralin (154).

$C_{20}H_{10}O_2S$.—2-Thionaphthene-2'-acenaphthyleneindigo (C. I. 1228): 516.5, 479 in xylene; 519.5, 482 in tetralin (154). Ciba Scarlet G, 526, 490, 444 in C_8H_7N . Thioindigo Scarlet 2G, 525, 490 (116); cf. (190).

$C_{20}H_{12}O_2S_2$.—Dye from hydroxythionaphthene and maleic dialdehyde: 527, 484 in xylene (167).

$C_{20}H_{14}Br_2O_4S_2$.—5, 5'-Dibromo-6, 6'-diethoxythioindigo (C. I. 1218): 529, 490.5 in xylene; 531.5, 492.5 in tetralin (154); 539, 494 in C_8H_7N ; 598, 547, 501 in H_2SO_4 (116).

$C_{20}H_{14}Cl_2O_4S_2$.—4, 4'-Dimethyl-5, 5'-dichloro-7, 7'-dimethoxythioindigo (C. I. 1219): 590.5, 554 in xylene; 593.5, 556.5 in tetralin (154).

$C_{20}H_{14}N_2O_4$.—*N*, *N'*-Diacetylindigo: 545 in xylene (524); cf. (166).

$C_{20}H_{16}N_4O_4$.—5, 5'-Diacetyldiaminoindigo: (115).

$C_{20}H_{16}O_2S_2$.—4, 7, 4', 7'-Tetramethylthioindigo: 552, 511 in xylene; 555, 513 in tetralin (154).

$C_{20}H_{16}O_2S_4$.—6, 6'-Diethylthiothioindigo (C. I. 1216): 554.5, 494.5 in xylene; 537, 496.5 in tetralin (154). Helindone Scarlet S, 542, 492 in C_8H_7N ; 530, 490 in H_2SO_4 (116).

$C_{20}H_{16}O_2S$.—3, 4-Dihydro-2-naphthalene-6'-ethoxy-2'-thionaphtheneindigo: 565, 525 in $C_6H_5NO_2$ (168).

$C_{20}H_{16}O_4S_2$.—6, 6'-Diethoxythioindigo (C. I. 1217): 518.5, 485.5 in xylene; 520.5, 487.5 in tetralin (154). Helindone Orange R, 526, 490 in C_8H_7N ; 547 in H_2SO_4 (116).

$C_{20}H_{18}N_2O_2$.—*N*, *N'*-Diethylindigo: 650 in xylene; 653 in tetralin (524); 652.6 in $CHCl_3$ (350); cf. (266).

1, 5, 1', 5'-Tetramethylindigo: 655 in xylene (117).

$C_{21}H_{14}N_2O_4$.—Ethylindigomalonate: 550 in xylene. Benzoyl deriv., 505 in xylene (524).

$C_{22}H_{13}NO_2$.—1-Anthracene-2-indoleindigo: 660 in $C_2H_2Cl_4$ (43).

2-Anthracene-2-indoleindigo: 660, 603 in $C_2H_2Cl_4$ (43).

9-Anthracene-2-indoleindigo: 492 in $C_2H_2Cl_4$ (43).

$C_{22}H_{13}NO_2S$.—2-(*N*-Phenylindole)-2'-thionaphtheneindigo: 535 in H_2SO_4 (?) (166).

3-(*N*-Phenylindole)-2'-thionaphtheneindigo: 500 in H_2SO_4 (?) (166).

$C_{22}H_{13}NO_3$.—5-Hydroxy-2-anthracene-2-indoleindigo: 664, 606 in $C_2H_2Cl_4$ (43).

$C_{22}H_{14}N_2O_2$.—*N*-Phenylindirubin: 550 in H_2SO_4 (?) (166).

$C_{22}H_{16}O_4$.—*bis*-(4-Methoxynaphthalene)-indigo: 610 in C_6H_6 (185).

$C_{22}H_{18}N_2O_{10}$.—Tetramethoxyindigodicarboxylic acid: 563.3, 516.2 in H_2SO_4 (350).

$C_{24}H_{12}Br_2N_2O_2$.—Dibromo-*bis*- β -naphthindoleindigo (C. I. 1198): 619.5 in xylene; 623.5 in tetralin (154).

$C_{24}H_{12}O_2S_2$.—*bis*-1, 2-Naphthothiopheneindigo: 565 in $C_2H_2Cl_4$ (169).

bis-2, 1-Naphthothiopheneindigo: 577 in $C_2H_2Cl_4$ (169).

bis-2, 3-Naphthothiopheneindigo: 605 in $C_2H_2Cl_4$ (169).

bis-1, 8-Naphthothiopheneindigo: 644 in $C_2H_2Cl_4$ (169).

$C_{24}H_{13}NO_2S$.—Naphthindole-2, 1-naphthothiopheneindigo: 596 in $C_2H_2Cl_4$ (169).

$C_{24}H_{14}N_2O_2$.—*bis*-Naphthindoleindigo: 626 in $C_2H_2Cl_4$ (169).

Ethylindigophenylacetate: 555 in xylene. Benzoyl deriv., 510 in xylene (524).

Dye from oxythionaphthene and terephthalic aldehyde: 488, 457 in C_7H_8 (167).

$C_{24}H_{16}N_2O_2$.—Dye from indoxyl and terephthalic aldehyde: 530, 490 in C_7H_8 (167).

$C_{24}H_{19}N_5O_2$.—Indigoazodimethylaniline: 572 (111).

$C_{26}H_{18}N_2O_3$.—Benzoyl-*o*-tolylindigo: 575 in xylene (524).

$C_{28}H_{18}N_2O_2$.—*N*, *N'*-Diphenylindigo: 630 in H_2SO_4 (?) (166).

$C_{29}H_{18}N_2O_4$.—Ethyl (anhydrophenylacetic acid)-indigomalonate: 555 in xylene (524).

$C_{30}H_{16}N_4O_8$.—*N*, *N'*-Dinitrobenzoylindigo: 570 in xylene (524). $C_{30}H_{18}N_2O_4$.—*N*, *N'*-Dibenzoylindigo: 578, 534 in xylene; 580, 536 in tetralin (154); 575 in xylene (524).

$C_{32}H_{18}N_2O_2$.—Lake Red Ciba B: 555 in xylene (524).

$C_{32}H_{18}N_4O_4Zn$.—"Zinc indigo": 570 in $CHCl_3$ (?) (353).

$C_{32}H_{26}N_6O_2S_2$.—*bis*-Dimethylanilinedisazothioindigo: 499 (111).

$C_{32}H_{28}N_8O_2$.—*bis*-Dimethylanilinedisazoindigo: 501 (111).

$C_{60}H_{62}N_6O_2$.—Di-(tetramethyldiaminodiphenylmethane)-diindoxyl: 596.4, 499.3 in H_2O after oxidation in HOAc soln. (540).

$C_{62}H_{66}N_6O_2$.—Di-(tetramethyldiaminodiphenylmethane)-di-*o*-methylindoxyl: 576.3, 507.4 in H_2O after oxidation in HOAc soln. (540).

Di-(tetramethyldiaminodiphenylmethane)-di-*p*-methylindoxyl: 634.3 in H_2O after oxidation in HOAc soln. (540).

The indigoid dye from α -aminopyridine and $ClCH_2CO_2H$ has a max. at 515 in slightly alk. soln. and "glyoxalin red" a max. at 510 (124). Dye max. in C_8H_7N :—Ciba Red R (C. I. 1229), 529, 491; Ciba Violet R (C. I. 1222, note), 603, 563; Helindone Brown 2R (C. I. 1223), 582, 530, 498; Helindone Brown 5R (C. I. 1224), 584, 532, 496; Helindone Violet B (C. I. 1219), 603 (?), 568; Helindone Violet 2B (C. I. 1219), 607, 562; Helindone Violet BD, 597, 549; Helindone Violet R (C. I. 1219), 574, 531 (116).

TABLE 12.—MISCELLANEOUS DYES

$C_6H_3N_3O_7$.—*sym*.-Trinitrophenol (picric acid, C. I. 7): 360 in EtOH; 380 with NaOEt; 380 in piperidine; 520 in benzene and anthracene (27); cf. (519, 332).

$C_{10}H_8N_2O_5$.—2, 4-Dinitro-1-naphthol, Na salt (Martius Yellow, C. I. 9): 445, 399, 379 in H_2O (370); cf. (325q, 348q).

$C_{10}H_6N_2O_8S$.—2, 4-Dinitro-1-naphthol-7-sulfonic acid, Na salt (Naphthol Yellow S, C. I. 10): 429, 399, 257 in H_2O (179q); cf. (390q, 391q, 420q, 422q).

$C_{10}H_6O_4$.—3, 5, 6-Dihydroxy-1, 4-naphthoquinone (Naphthazarine): 488, 333, 267 in EtOH (394); neutral alkali salt, 627, 569, 309, in concd. H_2SO_4 , 548, 505, 325 (443); cf. (550); in acetic anhydride with boracetate, 580, 535 (268).

$C_{12}H_4N_2O_{12}NH_4$.—Hexanitrodiphenylamine, NH_4 salt (Aurantia, C. I. 12): 425 in H_2O (390q); cf. (391).

$C_{12}H_7Br_2NO$.—2, 6-Dibromo-*N*-(*p*-hydroxyphenyl)-*p*-quinoneimine: (175q).

$C_{12}H_7Cl_2NO$.—2, 6-Dichloro-*N*-(*p*-hydroxyphenyl)-*p*-quinoneimine: (175q).

$C_{12}H_9NO$.—Indophenol (*N*-(*p*-hydroxyphenyl)-*p*-quinoneimine): 630 in alk. H_2O ; 495 in acid H_2O ; 645 in alk. EtOH; 505 in acid EtOH (677).

$C_{12}H_{11}N_3$.—Indamine (*p*-aminophenyl-*p*-quinonedimine) (Phenylene Blue): 660 (57); cf. (111); indamineazodimethylaniline, 598 (111).

$C_{13}H_9NO_2$.—2, 8-Dihydroxyacridine: 421 in H_2O (57).

$C_{13}H_{10}O_3$.—4, 4'-Dihydroxybenzophenone: 323 (550).

$C_{13}H_{10}O_5$.—3, 3', 4, 4'-Tetrahydroxybenzophenone: 449, 406 (550).

$C_{13}H_{11}N_3$.—2, 8-Diaminoacridine (Flavine): 427 in H_2O (57).

$C_{14}H_{14}N_2O$.—Phenol blue: (512).

$C_{16}H_{18}N_3(Cl)$.—2, 8-Diamino-3, 7-dimethylacridinium chloride (Acridine Yellow): 457 in H_2O ; 463.3 in EtOH; 464 in AmOH (155).

$C_{16}H_{18}N_4(Cl)$.—Toluylen blue: (512).

$C_{16}H_{11}NO_6S$.—*N*-(*p*-Hydroxyphenyl)-2-sulfo-1, 4-naphthoquinoneimine: 500 in neutral or acid H_2O ; 625 in alk. H_2O ; 510 in EtOH (272); cf. (269, 282q).

$C_{16}H_{12}Cl_2N_4O_7S_2$.—Xylene yellow, Na salt (C. I. 639): (600q).

$C_{16}H_{12}N_4O_9S_2$.—Tartrazine, Na salt (C. I. 640): 430, 260 (432); cf. (271, 388q, 447q, 600q).

$C_{16}H_{12}N_4O_5S_2$.—*m*-Sulfophenylhydrazine of 1-*m*-sulfophenyl-5-hydroxypyrazol-3-carboxylic acid, Na salt: 434 in H_2O (297).

$C_{16}H_{12}O_5$.—Succinylresorcin: 504 in alk. H_2O (454).

$C_{16}H_{14}N_4O_4S$.—Flavazin L, Na salt (C. I. 636): (600).

$C_{16}H_{20}N_3(Cl)$.—Tetramethylindamine chloride (Bindschedler's Green): 730 in H_2O (465); perchlorate in acid EtOH, 640; polyacidic salts (306); 656.7 in $CHCl_3$; 669.6 in CS_2 ; influence of temp. (57); cf. (512).

$C_{17}H_{19}N_2S(Cl)$.—Thiopyronine: 564.5, 528 in H_2O ; 564.3, 524.2 in EtOH; 564.3, 524.2 in AmOH (155).

$C_{17}H_{20}N_2O$.—4, 4'-Tetramethyldiaminobenzophenone (Michler's Ketone): 368 in acid EtOH (644); cf. (192, 465); (see also 4, 101: 1469; 12.)

$C_{17}H_{20}N_3(Cl)$.—2, 8-Tetramethyldiaminoacridinium chloride (Acridine Orange, C. I. 788): 494.4, 463.9 in H_2O ; 490.9, 459.5 in EtOH; 490.9, 459.5 in AmOH (155).

$C_{17}H_{21}N_2(Cl)$.—4, 4'-Tetramethyldiaminobenzhydrol chloride (Michler's hydrol): 603.3 in H_2O ; 605 in EtOH (155); 610 in acid EtOH (644); cf. (111, 463, 465).

$C_{17}H_{22}N_3(Cl)$.—Auramine (C. I. 655): base, 300 in EtOH (192); chloride in H_2O , 365, 315, 270 (420a); cf. (600a); 265 in H_2SO_4 (192); infra-red abs. (514); acetate in EtOH, 435, 375, (310) (192); cf. (38).

$C_{18}H_{10}N_2O_2$.—Triphenyldioxazine: 504, 470.5 in EtOH; 642.1, 586, 537.5 in H_2SO_4 (concd.) (155).

$C_{18}H_{12}N_4$.—Fluorindine: hydrochloride, 630.1, 578.7, 534.8, 497.3, 465.9 in EtOH (619.2, 570.2, 530.3 with HCl; 576, 532.8, 495.5 with NH_3) (155).

$C_{18}H_{16}N_2O$.—Indophenol P (C. I. 821): (516).

$C_{18}H_{19}N_2S(ClO_4)$.—*p*-Dimethylaminobenzylidene-*N*-methylbenzothiazole perchlorate: 528, 278 in EtOH; *o*-dimethylamino isomer, 478, 341 in EtOH (348).

$C_{19}H_{13}N$.—Phenylacridine: 348, 254 in EtOH (or $CHCl_3$); sulfate, 403, 348, 256 in EtOH (212).

$C_{19}H_{15}N_3$.—Chrysamine: various salts (497); phosphine (C. I. 793), 481, 366, 280 in EtOH (421); 470 in H_2O (concd.); 472 (dil.) (269).

$C_{19}H_{21}N_4(Cl)$.—Cyanoacridine Orange (2, 8-dimethylamino-2, 5, 8, 10-tetrahydro-10-methyl-5-acridine nitrile): 585, 540, 280 in EtOH (221).

$C_{19}H_{24}N_3O(Cl)$.—Acetylauramine chloride: 350 in alk. H_2O (192); 385 in EtOH (582).

$C_{20}H_{10}(Fe)N_2O_{10}S_2(Na_2)$.—Naphthol Green (C. I. 5): 700 (510); infra-red abs. (511); cf. (510).

$C_{20}H_{12}OS_2$.—Dithiofluoran: 513, 363, 360 in HOAc + EtOH (442).

$C_{20}H_{13}NO_4$.—Resorcinolphthalamein: 489 in dil. NH_4OH (173).

$C_{20}H_{15}NO_3$.—Phenolphthalamein: 555 in dil. NH_4OH (173).

$C_{20}H_{16}N(Cl)$.—*N*-Methylphenylacridine chloride: 436, 348, 265 in $CHCl_3$; 436, 348, 254 in EtOH; iodide in $CHCl_3$, 425, 354, 254 (212a); various acid salts (209).

$C_{20}H_{23}N_2O_3(Cl)$.—*asym*.-Dimethyl-*m*-aminophenolsuccinein (Rhodamine S, C. I. 743): 540 in H_2O and on wool (642).

$C_{20}H_{26}N_3O(I)$.—Acetylmethylauramine iodide: 600 in EtOH (582).

$C_{20}H_{27}N_3S$.—Tetraethylindamine sulfide: $ZnCl_2$ double salt, 656.5, 604.2 in EtOH (5).

$C_{20}H_{28}N_3(Cl)$.—Tetraethylindamine chloride: 659.4, 605.2 in EtOH; 657.3 in $CHCl_3$; 664.8 in CS_2 ; 673.9, 615.3 in H_2O (influence of temp.) (57).

$C_{21}H_{12}Br_4O_6$.—Tetrabromoresorcinolumbellein: 505 in H_2O + NH_3 (173).

$C_{21}H_{16}O_6$.—Resorcinolumbellein: 482 in H_2O + NH_3 (173).

$C_{21}H_{18}O_3$.—Phenolcinnamein: 565 in H_2O + NH_3 (173).

$C_{21}H_{18}O_5$.—Phenolumbellein: 543 in H_2O + NH_3 (173).

$C_{21}H_{20}N_3(Cl)$.—2, 8-Diamino-3, 7-dimethylphenylacridine chloride (Benzoflavine, C. I. 791): 458 in H_2O ; 468 in EtOH; 468.8 in AmOH (155); cf. (465).

$C_{22}H_{22}O_7$.—Resorcinolcamphorein: 497.5 in alk. H_2O (594).

$C_{22}H_{24}O_4$.—Phenolcamphorein: 518 in alk. H_2O (594).

$C_{22}H_{23}N_2(OAc)$.—3, 6-Di-(dimethylamino)-9-phenyl-3-isofluorene: 621 (111).

$C_{22}H_{26}N_3O_2S(Cl)$.—Benzenesulfoneauramine chloride: 570 in EtOH (582).

$C_{24}H_{16}N_4O_5S_2$.—*p*-Sulfonaphthylhydrazine of 1-*p*-sulfonaphthyl-3-carboxy-5-pyrazolone: Na salt, 480 in H_2O (abs. of 5-sulfonaphthyl deriv. about the same) (297).

$C_{24}H_{23}N_3O_2$.—Tetramethylflaveosine: 500.7, 471.3 in H_2O ; 500.7, 471.3 in acid H_2O ; 493, 465.7 in EtOH; 494.8, 462.6 with acid (155).

$C_{24}H_{26}N_3O(Cl)$.—Benzoylaauramine chloride: 590 in EtOH (582).

$C_{24}H_{28}N_4$.—Hexamethylrhonein: 503.2, 473.2 in H_2O ; 490.9, 458.2 in EtOH (155); 492.7, 460.2 in acid EtOH (193).

$C_{24}H_{28}O_4$.—*o*-Cresolcamphorein: 532 in alk. H_2O (594).

$C_{24}H_{28}N_3O_9S_2$.—Di-(methylisopropyl)-tartrazine: Na salt, 445 in H_2O (271).

$C_{25}H_{13}N_7O_{12}$.—1, 3, 6, 8-Tetranitrodinitrodiphenylcarbazine: 539 in alk. EtOH (304).

$C_{25}H_{15}N_5O_8$.—1, 3, 6, 8-Tetranitrodiphenylcarbazine: 542 in alk. EtOH (304).

$C_{25}H_{16}N_4O_6$.—1, 3, 6-Trinitrodiphenylcarbazine: 555 in alk. EtOH (304).

$C_{25}H_{17}N_3O_4$.—3, 6-Dinitrodiphenylcarbazine: 594 in alk. EtOH (304).

1 (?), 3-Dinitrodiphenylcarbazine: 572 in alk. EtOH (304).

$C_{25}H_{18}N_2O$.—2-Aminodiphenylcarbazone: 595 in EtOH; 591 in MeOH; 512 in Et_2O ; 508 in $CHCl_3$; 508 in CS_2 ; 500 in C_6H_6 ; 548 in Me_2CO ; 564 in C_8H_5N (305).

$C_{25}H_{18}N_2O_2$.—3-Nitrodiphenylcarbazine: 560 in alk. EtOH (304).

$C_{25}H_{19}N_3O$.—2, 4-Diaminodiphenylcarbazone: 535 in EtOH; 509 in Me_2CO ; 495 in Et_2O ; 490 in C_6H_6 (305).

$C_{28}H_{20}N_4O_6S_4$.—Chloramine yellow, C. I. 814 (Na salt): on wool (10).

$C_{28}H_{31}N_3O_2$.—Tetraethylflaveosine; 505.6, 473.6 in acid H_2O ; 492.6, 460.2 in EtOH (499.7, 467.5 with acid) (155).

$C_{30}H_{31}Br_4N_3O_2$.—Tetrabromotetraethylflaveosine, ethyl ester: 494.8, 466.3 in H_2O (495.5, 467 with acid); 498.2, 466.8 in EtOH (500, 468 with acid) (155).

$C_{30}H_{35}N_3O_2$.—Tetraethylflaveosine, ethyl ester: 507.7, 474 in H_2O (neutral or acid); 501.1, 467 in EtOH (501.9, 468 with acid) (155).

$C_{34}H_{40}N_4(OAc)_2$.—*bis*-Tetramethyldiaminodiphenylcarbinol diacetate: 599 (111).

Cyanile green: infra-red abs. (296).

Eastman Red Sensitizer No. 700: infra-red abs. (387).

Filter Yellow: ultra-violet abs. (447).

Immedial Black B: 610, 580 on cotton (522).

Immedial Pure Blue (C. I. 201): dyeings, (522, 627).

Immedial Purple: 545, 525 on linen (522).

Katigen Green 2S (C. I. 1006): 660, 540 on cotton (522).

Katigen Violet: 565, 540 on cotton (522).

Pontachrome Green GLO: 555 in H_2O (concd.), 575 (dil.) (269).

Aminopyrazolones: (123).

Azomethines: (30, 468, 469, 471, 475, 521, 542).

Citraconeins and itaconeins: (91).

Dianilides from substituted malachite green leuco bases and dinitrophenylpyridine chloride (541).

Diphenylmethane derivatives: (192, 454, 463, 464, 467, 470, 529, 644).

Dirosanilides and rosdianilides of β -oxyacrolein and diformaldehydes (539).

Dyes from bromocyanopyridine and secondary amines: (345).

Hydrazones: (29, 32, 53, 256, 360, 380, 434, 531, 597, 598, 618, 619).

Meriquinones: (77).

Nitro- and nitroso-compounds: (27, 51, 221, 222, 224, 333, 424, 447, 467, 468, 469, 470).

Pyronol dyes derived from natural coloring matters: (645).

Pyrrylmethane derivatives: (137, 141, 144, 145, 146, 229, 517, 651).

Substituted chromones: (249).

Succinyl- and glutaryl-fluoresceins and rhodamines: (112).

"Vinylene-homologous" indol and pyrrol dyes: (344).

TABLE 13.—NATURAL COLORING MATTERS

Acacetin: 333, 263; diacetyl deriv., 317 (606); cf. (608).
 Acaciin: 333, 263 (238); cf. (607).
 Allochlorophyllan: 655, 600, 557, 533, 519, 487, 433, 413, (370) in Et₂O (405); cf. (2924, 2934, 2944, 412).
 Alloporphyrin: 635, (600), 585, 573, 544, 507 in Et₂O; 623, (597), 578, 568, 534, 503 in alk. EtOH; chloride, 634, 576, 545, 507 in EtOH (610, (604), 576, 564, 556, 531 with excess HCl) (61); cf. (404).
 Apigenidin: (16).
 Apigenin: 333, 247 in EtOH (591); cf. (240, 5904, 607, 608); 341, 266 in dil. KOH; reduction product, 570 in dil. KOH (644).
 Trimethylapigenin (606).
 Apiin: (240); cf. (607).
Aplysia punctata pigment: (499).
 Bacteriochlorin: 593 in EtOH (68); cf. (478).
 Bacterioerythrin: 548, 510, 470 in CS₂ (68).
 Bacteriopurpurin: 593, 528, 490, 463 (mixture of bacteriochlorin and bacterioerythrin) (68); cf. (478).
 Baicalein: 333, 271 in EtOH (5894). Triacetyl deriv., 288, 250 in EtOH (5894).
 Baicalin: 286 in EtOH (5894). Tetraacetyl deriv., 300 in EtOH (5894).
 Bilirubin: 638 with NH₃ and Zn salts (367); cf. (18, 37, 864, 2534, 515, 5854, 5864, 644, 6464). Copper bilirubin: 666.5 to 635.9 in EtOH with 1% HCl (354). Azo dye with diazoniumacetophenone salts: 522 in EtOH; 639 in KOH (496); cf. 202, 29: 411; 00).
 Biliverdin: 639 in acid EtOH (367); cf. (515, 6464).
 Bixin: (402).
 Blood: (6014, 5994).
 Bone marrow pigment (cattle): 488.8, 459.5, 433.4 in CHCl₃ (369).
 Bromococcin: (106).
 Bromoporphyrin I: 626.1, 570, 530.3, 495.8 in Et₂O (with HOAc); 598.6, 555.5 in 25% HCl (133).
 Capsanthin: (673).
 Carbon monoxide hemoglobin: 570, 538, 416, 347 (4804); cf. (94, 24, 78, 109, 2324, 233, 2364, 386, 548, 5994, 672); infra-red abs. (235); influence of temp. (234); action of light (237). [From human blood, 571.0; from *Arenicola*, 569.9 (36).]
 Carbon monoxide sulfhemoglobin: (78, 386).
 Carminic acid: 544, 504, 474 in H₂SO₄; 624, 581, 498, 466 in S. B. A.; 571, 530, 492 in alk. H₂O (101); cf. (102); influence of temp. (57); ammoniacal carmin, 560, 518 (369); carminic anhydride, 585, 545 in H₂SO₄; 580, 535 in S. B. A.; 580, 545 in dil. KOH (104).
 Carotin: 485, 435 in EtOH; 517, 482 in CS₂ (662); 424 in Et₂O (93); 482, 451, 273 in cyclohexane (5304); cf. (5574, 5584, 617, 655). Hepatocarotin (95).

Chalkone: 302 in EtOH (also data on hydroxy- and alkyloxy-deriv.) (592).

Chetopteris: (547).

Chlorocruorin: (157).

Chlorocruoroporphyrin: 641, 580, 553, 512 in Et₂O; 614, 559 in HCl (1:2) (158).

Chlorophyll: 670, (641), 614, 580, (540) in phytol (662); 656.5, 609.5, 537 in EtOH; 662, 607, 534.5 in Me₂CO (252); cf. (92, 286, 2914, 386, 404, 6474); infra-red abs., 745 (481); ultra-violet abs., 420, 325 (374); colloidal solutions, 676, 616, 543.5 in EtOH + H₂O (252); cf. (662); living leaf, 678, (643), (616), (581), (543), 513 (662); 675.5, 615.5, 547 (252); cf. (2914, 404, 6264) [*Euglena* (19)]; "crystallized chlorophyll" (ethylchlorophyllide): 665, 615, (581), (538), (465), (433) in EtOH (652); cf. (404).

Chlorophyll A: 662, 612, 578, (531), (497), 459, 433 in Et₂O (662); 304 (92); colloidal soln., 678, 626, 588, (544), (500), 461 in H₂O with 1% Me₂CO (662). Hepatochlorophyll A (95).

Chlorophyll B: 663, 643, 613, 592, (565), (539), (503), 457, 429 in Et₂O (662); 304 (92). Hepatochlorophyll B: (95).

Chlorophyllan: (292, 293, 294, 398); (see Allo- and Neochlorophyllan).

Cholecyanin: 638 (367).

Chromodoris (zebra, etc.) pigment: 620-22 in formaldehyde; 622 in EtOH (83); 620 in alk. H₂O; 629 in acid H₂O (82).

Chrysin: (317), 266 in EtOH; diacetyl deriv., 286, 250 in EtOH (5914); cf. (240, 590, 607, 608). Dimethylchrysin: (606).

Coccinone: (100).

Copratin: 545, 516 with pyridine and hydrazine hydrate (568); cf. (573, 577).

Coproporphyrin: 621.3, (574.5), 566.3, (529.3), 523.8, 493 in Et₂O with little HOAc; 591.5, 548.5 in 25% HCl; 592, 548.3 in H₂SO₄ (576); cf. (435, 571, 573, 577, 579). Methyl ester: 620.2, 565.3, 532.8, 498 in CHCl₃ (568). Fe complex: (574, 575, 576). Cu complex: (568, 579).

Coproporphyrin: 593.1, 573.5, 549.9, 524.5, 509.3 (also 405.4 according to 202, 126: 169; 23) in 25% HCl; 617.5, 565.5, 538.3, 503.3 in dil. KOH (565); 624, 597, 578, 568, 531, 497 in Et₂O (125); cf. (126, 329, 435, 483, 567, 571, 573, 577, 579, 6144). Methyl ester: 622.6, 597.6, (577.1, 567.6), 532.5, 498.9 in CHCl₃ (126); (also 405 (244)); cf. (125, 565, 568). Fe complex: (125, 574, 575, 577). Misc. derivs. (126, 579).

Corpus luteum pigment: (principally carotin) (369).

Crenilabrus blue (*Crenilabrus parvo*): (6744).

Cyanidin: 510.5, 269.5 in EtOH (5604); chloride, 545, (286) (608); (549 in EtOH (656)).

Cyanin chloride: 504 in 7% H₂SO₄; K salt (670), 598, 570 in salt soln. (656); cf. (608).

Cyanoheatin: (634).

Cyanohemochromogen: 568, 537 (634); cf. (570, 572).

Cyanohemoglobin: 551 (373); cf. (2414).

Cyanomethemoglobin: 539 (245).

Cyanomyochromogen: 555 (570, 572).

Cytochrome: 604.6, 566.5, 550.2, (532, 528), 521 (326); cf. (119, 327, 573, 670).

Delphinidin: 522.5, 275 in EtOH (5604); cf. (477, 660).

Delphinin chloride: 527 in 25% HCl (660).

Dermocyanin: (337).

Deuterohemin: 545.6, 516.2 (135).

Deuteroporphyrin: 621.7, 595.7, 576.8, 566.8, 525.9, 494.1 in Et₂O; 592.4, (572.6), 549.3 in 25% HCl (135).

Diazona violacea pigments: green pigment, 620 in CS₂; violet pigment, 611 in ethyl benzoate, 606 in C₂H₂Cl₄ (284).

Dopamelanin: no characteristic bands in visible or ultra-violet (46).

Echinochrome (*Arbacia punctulata*): 530, 484 in Et₂O; 550, 530 in EtOH (530, 484 with HCl; 515, 484 with NH₃) (427).

- Endothia* pigments: (247q); endothine red (549q).
 Emodin: 680.7, 626.6 in H_2SO_4 (540.9, 500.4 on dilution) (350); cf. (337).
 Etiophyllin: (643), (621), (612), 578, 543, 498, (470, 458, 446) in Et_2O (662); cf. (139).
 Etioporphyrin: (646), 622, 611, 596, 576, 567, 528, 482 in Et_2O (662); Cu salt, 559.7, 522.7, 483.3 (180); halogen deriv. (148).
 Etiouroporphyrin: (and Fe salt) (130).
 Etioxanthoporphyrin: ultra-violet abs. (148).
 Esculin: infra-red abs. (1.1), 3.9, 8.7 μ (296); ultra-violet abs., 340 (428); cf. (481).
 Flavone: 286, 250 in EtOH (591q); cf. (590q, 608); flavone coloring matters from various sources (591q); cf. (590q); flavone and flavonol derivs. (239).
 Fluorohemin: ethyl derivs. (356).
 Fluoromethemoglobin: 612, 494 (631); cf. (241q, 548).
 Fucoxanthin: 478, 448 in EtOH (662).
 Galangin: 366, 265 in EtOH (591q); cf. (590q, 608). Trimethylgalangin: (606).
 Glaucophyllin: (663), 601, 554, (521) in EtOH (662).
 Green animal coloring matters: (527).
 Green pigments of ripe seeds: (336).
 Helicorubin: (96).
 Hemateric acid (α -hematoporphyrinoidin): 630.3, (604), 574.4, 540.6, 507 in CHCl_3 (566); 601, 555 in H_2SO_4 (571); cf. (435, 573, 579, 580); methyl ester (577); metallic complexes (574, 575, 577, 579).
 Hematin: 659, 578, 535 in dil. HCl; 616, 568, 540 in alk. H_2O ; 632 in EtOH; 630, 540, 502 in acid Me_2CO ; 580, 560, 524 in alk. Me_2CO (369); action of light (631): reduced hematin, 583.5, 556 (264); carbon monoxide reduced hematin, 566.5, 530 (264); cf. (70q, 368, 480q, 548, 633q); α -hematin: (566, 567, 568, 573, 577).
 Hematoporphyrin: 595.5, 573.8, 551.7, 526.3, 514.3, (507.8), 407.5 in 25% HCl (406.5, 390 in dil. acid); 618.5, 566.8, 540.5, 504.5, 461 in dil. KOH; 624, (597), 569, 529, 497, (471) in Et_2O (657); cf. (70q, 121, 186q, 230q, 244, 298, 368, 414, 435, 483q, 505, 548, 566, 567, 571, 573, 577, 599q, 611q, 661, 672, 676); acetyl deriv., 601, 554.5 in H_2SO_4 (578); esters (140, 244, 355, 564, 604q); metallic complexes (263, 453, 574, 575); α -hematoporphyrin: 629, 575, 540, 507 in CHCl_3 (566); cf. (505, 567, 580).
 Hemibilirubin: (371).
 Hemin: 612, 567, 390 in dil. alk. H_2O (369); 405 in CHCl_3 with NH_3 (414); cf. (125, 368, 403, 404, 672); hemin derivatives (184, 355, 356, 357, 358).
 Hemochromogen: 558, 526, 385 (369); cf. (70q, 94, 237, 263, 368, 548, 614q, 672); derivatives (263, 264, 327, 570).
 Hemoglobin: 558, 429 (369); infra-red abs. (235); ultra-violet abs. (538); action of light (237); Hb. of annelids (632q); chloro-hemoglobins (639); cf. (9q, 15q, 24, 72q, 228q, 251, 263, 295, 328q, 368, 548, 672).
 Hemophyllin: (180).
 Hemoporphyrin: 592.8, 572.4, 549.7 in 25% HCl; 617.4, 570.5, 539.4, 505, 449 in dil. KOH (125); cf. (435, 504, 571); derivatives (139).
 Hepato-pancreas pigment of crayfish: secretion gave 560, (596) (372).
 Hesperetidin: (16, 17).
 Hesperetin: (17).
 Hydrobilirubin: 497 in acid H_2O ; 508 in EtOH with ZnCl_2 + NH_3 (371).
 Hypericum red (*Hypericum perforatum*): about 597, 547, 512 in 80% EtOH (75).
 Idaeine chloride: 507 in 7% H_2SO_4 (659).
 Isocoproporphyrin: 622.8, 597.1, 577.9, 568.2, 527.7, 494.4 in acetic ether; 591.2, 568.4, 547.1, 521.6, 505.9 in 5% HCl (126); β -isocoproporphyrin and various derivatives (126).
 Isomesoporphyrin: 622.5, 611.8, 596, 576.4, 567.1, 559.4, 544, 526.8, 494.1, 465 in Et_2O ; 589.5, 566.7, 546.9 in 5% HCl; ester and its Cu salt (147).
 Isoquercitrin: 362, 263 in EtOH (551).
 Isorhamnetin: 374, 255 in EtOH (591q); cf. (590q).
 Isouroporphyrin: 608.5, 558.2, 537.6, 502.9 in dil. NaOH; 598.2, 576.5, 552.2 in 25% HCl (128); octamethyl ester and Cu salt (128).
 Kämmerer's porphyrin: 603, 557, (554) in 25% HCl; 641, 582, 544, 509 in dil. KOH; 633, 578, 567, 533, 498 in Et_2O (125); cf. (132, 483q); dimethyl ester (132).
 Kämpferide: (590q, 591q, 608). Kämpferol and Kämpferitrin, (607, 608). Trimethylkämpferide (606).
 Kémeri's porphyrin: 638, 582, 534, 499 in Et_2O ; 595, 556 in 25% HCl (329).
 Kermesic acid: 633, 534, 501, 470 in H_2SO_4 ; 623, 576, 529, 493, 463 in S. B. A.; 567, 527, 493 in alk. H_2O (101); cf. (99); trimethyl ether, 500, 540 in H_2SO_4 (99); decarboxy deriv., 567, 527, 490 in alkali; 543, 504, 474 in H_2SO_4 (101); cf. (106).
 Lutein: (655); cf. (370, 373).
 Luteolin: 337, 253 in EtOH (591); cf. (590); reduction product (608).
 Lycopin: (654).
 Malvin: 519, 277.5 in slightly acid EtOH; 451, 389.5, 322 in slightly alk. EtOH (560q).
 Mandarin orange peel coloring matter: (330).
 Marennin (*Navicula ostrearia*): (47).
 Meconium pigment: 539, 576 in Me_2CO (band develops at 639 on long standing) (367).
 Melanins: (171).
 Mesobilirubin: Cu salt, 634.7, 580.3 in HOAc (142).
 Mesobilirubinogen: (483); condensation product with *p*-dimethylaminobenzaldehyde, 556 (483); condensation product with *p*-nitrobenzaldehyde, 545, 495 in EtOH (141).
 Mesobiliviolin: 606.5, 560.6, 498.3 in CHCl_3 ; Zn salt in EtOH, 626, 575, 509 (141).
 Mesobiliviolinogen: Zn salt, 556, 489 in EtOH (141).
 Mesoporphyrin: 592.7, 572.5, 549.7, 524, 509, 404.7 in 25% HCl; 629, 617, 601, (584, 574.5), (548, 526.5, 506.5) in dil. KOH (563); 623, 598, 579, 569, 528, 495 in Et_2O (125); cf. (139, 368, 369, 404, 435, 504, 505, 567, 571, 573, 577, 657, 672); dimethyl ester (139); metallic derivs. (574, 575, 671, 672).
 Methemoglobin: 631, 576, 540, 500 in neutral soln. (535); (410) (369); (604), 577.9, 540.6 in alk. soln. (233); (493, 415) (369); action of light (237); Met. Hb. of annelids (632); cf. (25, 70q, 73, 109, 227, 241q, 242q, 255, 366q, 368, 435, 548).
 Methyl chlorophyllide a: 662, 612, 578, 532, (500), 458, 432, in Et_2O (662); 641, 596, (566), 526, 494, 458 in alk. EtOH (663).
 Methyl chlorophyllide b: 663, 643, (614), 593, (566), 539, (504), 456, 430 in Et_2O (662); 641, 625, 580, (537) in alk. EtOH (663).
 Methyl phäophorbide a: 666, (635), 608, (559), 533, 502, (471) in Et_2O (663).
 Methyl phäophorbide b: 656, 599, 558, 534, 520, (489), (448), 436 in EtOH (663).
 Morin: (644); pentamethylmorin (606); morin reduction product, 586 in dil. KOH (644); cf. (608).
 Muscle pigment: (200).
 Mycoporphyrin (*Penicillioptis clavariaeformis*): (91).
 Myochromogen: 549.5, 519 (569, 572).
 Myohematin: (569, 572). (Cytochrome.)
 Myricetin: 374, 253 in EtOH (591); cf. (590q, 607); hexamethyl-deriv. (606); myricitrin (607); reduction product of myricetin and myricitrin (608).

Myrtillidine chloride: 583 in EtOH (665).
 Myrtilline chloride: 517 in 7% H₂SO₄ (665).
 Naringenin: (592q, 593).
 Naringin: (592q, 593).
 Neochlorophyllan: 667, 606, (559), 532, 496, (471), 411, 393, 371 in Et₂O (405); 668, 607, (563), 537, 506, 414, 399, 374 in CHCl₃ (294q); cf. (292q).
 Nephroresin: (14).
 Nitric oxide hemoglobin: 578.5, 541.8 (233); cf. (241q, 242, 548).
 Nitrite methemoglobin: (631.1), 577, 539 (233); cf. (241q).
 Ocrein: (416).
 Oenidine chloride: 553 in EtOH (665).
 Oenine chloride: 518 in 7% H₂SO₄ (665).
 Ooporphyrin: (132, 134, 566); dimethylester (125); esters and Fe complexes (132).
 Oxyhelcorubin: (96).
 Oxyhemocyanin: 571 to 581 in alk. H₂O with samples of different origins; ultra-violet bands at 346, 278 (69); 579, 475 (mollusks); 563, 475 (arthropods) (536).
 Oxyhemoglobin: infra-red abs. (235); 577.5, 541.7, 411.5 (562); ultra-violet abs. (251, 417, 480, 507); effect of light (237); influence of temp. (234, 289); action of Cl, etc. (425); effect of phenylhydrazine (373); cf. (9q, 71q, 72q, 73q, 89q, 109, 226q, 228, 232q, 233, 236q, 241q, 255q, 368, 369, 414, 548, 599q, 672); of human blood, 576.4; of *Arenicola*, 574.6; of *Nephys*, 575.7 (36); of annelids (632).
 Paeonidin: 511, 274 in EtOH (560q).
 Papendieck porphyrin (chloroform-soluble): 630, 576, 540.5, 507 in CHCl₃; 632, (585, 575.5), 535, 501 in Et₂O; 603.5, 557.5 in 25% HCl (565); cf. (132, 503); ester (132).
 Parahematin: (327).
 Pelargonidine: 504.5, 450, 400.5, 331, 267 in EtOH (560); chloride (608, 653, 664).
 Pelargonine chloride: (608, 653).
 Phaophytin: 662, 607, 561, 533, 501 in Me₂CO; Cu compd., 633, 599, 561 in Me₂CO; Zn compd., 654, 605.5, 564.5, 524 in Me₂CO; (data on colloidal solns.) (252).
 Phaophytin component a: 667, (635), 608, (559), 533, 502, 471 in Et₂O (663).
 Phaophytin component b: 656, 600, 559, 534, 520, (503), 449, 434 in EtOH (663).
 Phonoporphyrin: 593, 573, 549 in 25% HCl; 621, 572, 540, 506 in dil. KOH (125).
 Phycocyan: blue violet pigment (*Ceramium rubrum*), 616, 551 in H₂O; blue pigment (*Phormidium* sp.), 613, 575 in H₂O; blue green pigment (*Gallaei siridot*), 621 in H₂O (359); cf. (331, 365q); *Pal-mellococcus* (49); *Schizophyceae* (48).
 Phycoerythrin: (*Ceramium rubrum*), 567, 539, 495 in H₂O (359); (*Nostoc commune*) (610); (*Phormidium persicinum*) (650); cf. (331) (data on ultra-violet abs.) (365q, 545).
 Phylloerythrin: (641), 594, 567, 526 in CHCl₃; 620, 611, 570, (536) in HOAc + HCl (613, 567, 525 with zinc acetate) (407); cf. (131, 414q).
 Phyllohematin: (403); β -phyllohematin, 606.5, 556.5 in H₂SO₄; 556, 549.5, (522) with pyridine and hydrazine hydrate (571).
 Phyllophyllin: 594, 583, 551, 510, (480) in Et₂O (662).
 Phylloporphyrin: 632, 622, (604), 576, 567, 533, 501 in Et₂O; 628, 574, 537, 503 in alk. EtOH; chloride (609), 567, 536, (502) in EtOH (604, 561, (520) with excess HCl (658); cf. (125, 404q, 563); phylloporphyrin β : 604.5, 556 in H₂SO₄ (571); cf. (573).
 Phytochlorin e: lactam hydrate, 667, 609, (558), 531, 500 in Et₂O (662); 664, 613, 584, 533, (497) in 3% HCl; 662, 634, 606, 558, 534, 501, 467 in MeOH with 5% KOH (663).
 Phytorhodin g: 654, 599, 562, 527 in Et₂O (662); 647, 589, 563, 538 in 9% HCl; 653, 599, 575, (556), 531 in MeOH with 5% KOH (663).
 "Porphyrin X": (435).

Protopelargonidine: 438, 481 in pH 5 to 6 soln., 538 in alk. soln., (477).
 Protoporphyrin: 604, 581.4, 558.2 in 25% HCl (abs. of dimethyl ester and metallic complexes also given) (143).
 Pyocyanus pigments: ultra-violet abs. (551).
 Pyrrole black: (171).
 Pyrrophyllin: (620), 582, 542, 503 in EtOH (662).
 Pyrroporphyrin: (650), 622, 597, 568, 525, (498, 492, 487) in Et₂O; 621, (596), (575, 567), 529, 497 in alk. EtOH; chloride (620), 599, 568, 560, 552, 529, 496 in EtOH (600, (569, 560, 552), 527 with excess HCl (658); cf. (125).
 Quercetin: 375, 258 in EtOH (551); cf. (590q, 591q, 607, 608, 644); quercitrin, (607, 608); quercimeritrin (550); reduction products (608, 644); pentamethylquercetin (606); pentaacetylquercetin (591).
 Resoapigenidin: 465; 489 in pH 5 to 6 soln.; 540 in alk. soln. (477).
 Resochrysinidin: 435; 487 in pH 5 to 6 soln. (477).
Rhizostoma cuvieri pigment (zoocyanin): 640, 590, 560 (675).
 Rhodochlorogen (Hawaiian *Dioscorea*): 520 in acetic ether (38).
 Rhodophyllin: 599, 554, (516) in EtOH (662); 584, 545, (505) in alk. EtOH (661).
 Rhodoxanthin: (479).
 Rutin: 363, 263 in EtOH (552); reduction product (608).
 Sakuranetin: (16).
 Saproorphyrin D: 624.2, 568.8, 527, 496 in Et₂O; 597.5, 552 in H₂SO₄ (578).
Schizoneura lanigera pigment: 651, 589, 571, 543, 526, 504, 478 in Et₂O (561).
 Schizophyceae phycoerythrin: (48, 49).
 Scutellarein (and scutellarin): (240, 589q).
 Selenohemoglobin: (78).
 Shikizarin: 480, 333, 281, 250 in EtOH (394).
 Shikonin: 513, 282 in EtOH (394).
 Skatol red: (285).
 Stercobilin: (34).
 Stick lac: (615); cf. (102).
 Sulfhematin: (634).
 Sulfhemoglobin: 623, (579, 542), 423 in H₂O (369); cf. (386, 548).
 Syringidin: 520, 273.5 in EtOH (560).
 Thujorhodin: (616).
 Turacin: 565, 528 in H₂O with NH₃ (129); cf. (327).
 Urinary pigments: pathological pigment (364); pigment isolated with *p*-dimethylaminobenzaldehyde (attributed to skatoxyl) (553).
 Urobilin: 495 in EtOH; 510 in EtOH with ZnCl₂; 511 in alk. H₂O; 496 in acid H₂O (371); cf. (198, 373, 672); urobilinogen: (483q).
 Uroerythrin: (50).
 Uroporphyrin: 596.7, 577, 553.4, 526.3, 511.8 in 25% HCl; 611.3, 559.3, 538.4, 501.8 in dil. KOH (565); 600, 555.5 in H₂SO₄ (571); cf. (125, 435, 577); methyl ester, 625, 599, (581.5, 570.5), 536, 499.5 in CHCl₃ (565); 408 (244); cf. (125, 577); metallic salts (125, 126, 575).
 Urorosein: (14, 285).
 Vegetable oils: cottonseed (526q); cf. (415); sesame (415); cf. (52); soya bean (526); misc. (415).
 Visual purple: 503 in H₂O; 511 in the rods; 540 (corr.) in the cones (248); 565, 530, 500 (630).
 Wogonin: 286 in EtOH; acetyl wogonin, 290, 248 in EtOH (589q).
 Worm porphyrin: 607, 571, 544 in HOAc; 629, 579, 539, 504 in Et₂O (125).
 Xanthophyll: 475, 445, 419 in Et₂O (93); 478, 448 in EtOH; 508, 476 in CS₂ (662); cf. (558q, 655); hepatoxanthophyll (95).
 Zoocerythrin: (537).

The greater part of the tabulated data on chlorophyll derivatives was taken from the work of Willstätter and his collaborators. The following references to the work of Marchlewski and his collaborators may also prove of interest: (397, 400, 401, 404, 406, 410, 411, 414).

VISCOSITY OF PURE LIQUIDS

F. GIORDANI

CONTENTS	MATIÈRES	INHALTSVERZEICHNIS	INDICE	PAGE
Elementary substances.	Substances élémentaires.	Elemente.	Elementi.....	212
Inorganic compounds, B -Table.	Composés inorganiques, Table B .	Anorganische Verbindungen, B -Tafel.	Composti inorganici, Tavola B	212
Organic compounds, C -Table.	Composés organiques, Table C .	Organische Verbindungen, C -Tafel.	Composti organici, Tavola C	212
Effect of pressure on viscosity.	Effet de la pression sur la viscosité.	Einfluss des Druckes auf die Viskosität.	Effetto della pressione sulla viscosità.....	222
<i>Units.</i> —All values of the viscosity, η , are expressed in poises. The values tabulated are those of 100η which are equivalent to values of η expressed in centipoises.	<i>Unités.</i> —Toutes les valeurs de la viscosité, η , sont exprimées en poises. Les valeurs mentionnées dans les tables sont celles de 100η qui sont équivalentes aux valeurs de η exprimées en centipoises.	<i>Einheiten.</i> —Alle Werte der Viskosität, η , sind in C. G. S.-Einheiten ausgedrückt. Die in Zahlentafeln stehen Werte gelten für 100η und entsprechen den Werten von η , die in Hundert-C. G. S.-Einheiten gegeben sind.	<i>Unità.</i> —Tutti i valori della viscosità, η , sono espressi in poise. I valori nelle tabelle sono quelli di 100η che sono equivalenti al valore di η espresso in centipoise.

INFLUENCE OF PRESSURE ON VISCOSITY (14.7)

η = viscosity of liquid under tabulated pressure and temperature.

η_{30° = viscosity of liquid at 30° and atmospheric pressure; poises.

P = pressure in kg/cm².

The reference value of η_{30° is indicated under the name of compound.

FREE ENERGY OF CHEMICAL SUBSTANCES, ACTIVITY COEFFICIENTS, PARTIAL MOLAL QUANTITIES, AND RELATED CONSTANTS¹

MERLE RANDALL, SPECIAL EDITOR

Including

EQUILIBRIA BETWEEN TWO SOLID PHASES AND A GAS PHASE (DECOMPOSITION PRESSURES OF HYDRATES, AMMONIATES, ETC.)

FRITZ EPHRAIM²

and

SOLUBILITY OF SLIGHTLY SOLUBLE SALTS IN AQUEOUS SALT SOLUTIONS

MERLE RANDALL AND WILLIAM V. VIETTI³

SCOPE OF THE SECTION

This section includes all chemical equilibria except those which have been treated in previous sections. The section also includes miscellaneous thermodynamic data, such as partial molal quantities, activity coefficients, heat capacities of substances, etc., when these are combined with other data.

The tables are not as complete as could be desired. An attempt has been made to include as many types of systems as possible, and more space has been given to those systems which have not been widely discussed in the literature than to the more common systems. Omission of a table or mention by reference only in no way reflects upon the quality or importance of the data.

OBJET TRAITÉ DANS LA SECTION

Cette section comprend tous les équilibres chimiques, à l'exception de ceux dont il a déjà été traité dans des sections précédentes. La section renferme aussi des données thermodynamiques diverses, telles que des quantités moléculaires partielles, coefficients d'activité, capacités calorifiques des substances, etc., lorsque celles-ci sont combinées à d'autres données.

Les tables ne sont pas aussi complètes qu'on puisse le désirer. On s'est efforcé d'y mentionner un nombre aussi grand que possible de types de systèmes, et il a été réservé plus d'espace aux systèmes qui n'ont pas été largement discutés dans la littérature qu'aux systèmes plus communs. L'omission d'une table ou sa mention par une référence seulement ne se rapporte en aucune manière à la qualité ou à l'importance de la donnée.

¹ See also Entropy, etc., Vol. V, p. 84.² Editorial Note.—The data on this topic, compiled by Professor Ephraim, have been combined with the other data of this section according to the Standard Arrangement. They are identified by the symbol (E). Translation from the German and conversion into the units °K and atm. were effected by Gerald F. Breckenridge under the direction of the Special Editor.³ The senior author is alone responsible for the data on the complex amines and for references subsequent to the year 1925. For this section, see p. 313.

ARRANGEMENT

1. The systems or reactions are listed in the standard arrangement (see Vol. III, p. viii) in accordance with that substance in the reaction which has the highest key-formula. Thus, for example, in the reaction

the key-formulae are:

Pb, 23; PbO₂, 23—12; H₂SO₄, 8—22—14; PbSO₄, 23—8—14; H₂O, 22—1.

The highest key-formula is that for PbSO₄, 23—8—14 and this reaction will therefore be found listed under PbSO₄ and can be found by turning the pages until 23 appears as the first member of the key-numbers which appear at the top of each right-hand page. After locating the proper section in this way, the desired system or reaction can then be located by inspection.

2. Where choice of condition or state is involved for a given substance the order is gas (g); liquid (l); solid (s); in aqueous solution (aq); in non-aqueous solution, standard arrangement by solvents.

3. *Important Exceptions.*—Solid hydrates, ammines, etc., containing water, ammonia, etc., "of crystallization" are listed under the parent material. Water, ammonia, etc., of crystallization should, therefore, be neglected in writing key-formulae. (These exceptions do not, however, apply to complex ions, complex cobaltammines, etc.) Solubility data are in all cases listed under the solute.

SYMBOLS AND ABBREVIATIONS

In general the notation of Lewis and Randall (⁸⁸⁵) is used.

<i>a</i>	Activity.
<i>c</i>	Concentration (moles per liter).
<i>c_±</i>	Geometrical mean of concentration of ions.
<i>f</i>	Fugacity.
het.	Two-phase system richest in solute.
ln	Logarithm to the base <i>e</i> .
log	Logarithm to the base 10.
<i>m</i>	Molality (moles per 1000 g H ₂ O, <i>in vacuo</i>).
<i>m_±</i> <i>m_±⁰</i>	} <i>v.</i> p. 227.
<i>n</i>	
<i>n</i>	Number of moles.
<i>p</i>	Vapor pressure (in atmospheres).
<i>p.f.</i>	Proportionality factor (see activity coefficients).
<i>s</i>	Solubility (moles per 1000 g H ₂ O, <i>in vacuo</i>).
<i>s_c</i>	Solubility (moles per liter).
<i>t</i>	Temperature, °C.
<i>x</i>	Mole fraction.
<i>C_p</i>	Molal heat capacity at constant pressure.
<i>C_v</i>	Molal heat capacity at constant volume.
<i>E</i>	Internal energy.
<i>E</i>	Electromotive force.
<i>E⁻</i>	One gram atom of negative electricity.
<i>F</i>	Free energy.
<i>H</i>	Heat content.
<i>I</i>	Integration constant.
<i>K</i>	Equilibrium constant (activities) <i>v.</i> p. 227.
<i>K'</i>	Special equilibrium function.
<i>K_c</i>	Equilibrium function in terms of concentration.
<i>K_m</i>	Equilibrium function in terms of molalities.
<i>K_p</i>	Equilibrium function in terms of partial pressures.
<i>l̄</i>	Relative partial molal heat content.
<i>M</i>	Molal.
<i>P</i>	Total pressure or vapor pressure, in atmospheres.
<i>R</i>	Gas constant.
<i>S</i>	Entropy.
<i>T</i>	Absolute temperature.
<i>V</i>	Volume.
<i>w</i>	Molal mass.

ARRANGEMENT

1. Les systèmes ou les réactions sont disposés en liste suivant l'arrangement type (voir Vol. III, p. viii) en accord avec la substance de la réaction qui possède la formule-clé la plus élevée. Ainsi, par exemple, dans la réaction

les formules-clés sont

Pb, 23; PbO₂, 23—12; H₂SO₄, 8—22—14; PbSO₄, 23—8—14; H₂O, 22—1.

La formule-clé la plus élevée est celle de PbSO₄, 23—8—14 et par conséquent on trouvera la réaction mentionnée ci-dessus sous PbSO₄; on tournera donc les pages jusqu'à ce qu'on atteigne 23, premier membre des nombres-clés inscrits au haut de chacune des pages se trouvant à main droite. Ayant trouvé de cette façon la section convenable, on y recherchera alors, le système de réaction désiré.

2. Lorsque le choix de la condition ou de l'état est impliqué pour une substance donnée, l'ordre est gaz (g); liquide (l); solide (s); en solution aqueuse (aq); en solution non-aqueuse, arrangement type par dissolvants.

3. *Exceptions Importantes.*—Les hydrates solides, les ammines, etc., contenant de l'eau, de l'ammoniaque, etc., "de cristallisation" sont inscrits en liste sous la matière principale. L'eau, l'ammoniaque, etc., de cristallisation doivent donc être négligés lorsqu'on écrit la formule-clé. (Ces exceptions cependant ne s'appliquent pas aux ions complexes, cobaltammines complexes, etc.) Les données de solubilité sont dans tous les cas inscrits sous le corps dissous.

SYMBOLES ET ABRÉVIATIONS

C'est en général la notation de Lewis et Randall (⁸⁸⁵) qui est utilisée.

<i>a</i>	Activité.
<i>c</i>	Concentration (mol gr. par litre).
<i>c_±</i>	Moyenne géométrique de la concentration des ions.
<i>f</i>	Fugacité.
het.	Système à deux phases le plus riche en corps dissous.
ln	Logarithme de base <i>e</i> .
log	Logarithme de base 10.
<i>m</i>	"Molalité" (mol gr. par 1000 g H ₂ O, dans le vide).
<i>m_±</i> <i>m_±⁰</i>	} <i>v.</i> p. 227.
<i>n</i>	
<i>n</i>	Nombre de molécules grammes.
<i>p</i>	Pression de vapeur (en atmosphères).
<i>p.f.</i>	Facteur de proportionnalité (voir coefficients d'activité).
<i>s</i>	Solubilité (molécules gr. par 1000 g H ₂ O, dans le vide).
<i>s_c</i>	Solubilité (molécules gr. par litre).
<i>t</i>	Température, °C.
<i>x</i>	Fraction moléculaire gramme.
<i>C_p</i>	Capacité calorifique moléculaire à pression constante.
<i>C_v</i>	Capacité calorifique moléculaire à volume constant.
<i>E</i>	Énergie interne.
<i>E</i>	Force électromotrice.
<i>E⁻</i>	Un atome gramme d'électricité négative.
<i>F</i>	Énergie libre.
<i>H</i>	Contenu de chaleur.
<i>I</i>	Constante d'intégration.
<i>K</i>	Constante d'équilibre (activités), <i>v.</i> p. 227.
<i>K'</i>	Fonction d'équilibre spéciale.
<i>K_c</i>	Fonction d'équilibre en termes de concentration.
<i>K_m</i>	Fonction d'équilibre en termes de molalité.
<i>K_p</i>	Fonction d'équilibre en termes de pressions partielles.
<i>l̄</i>	Contenu de chaleur relatif partiel moléculaire.
<i>M</i>	Moléculaire gramme.
<i>P</i>	Pression totale ou pression de vapeur, en atmosphères.
<i>R</i>	Constante des gaz.

γ	Activity coefficient.
μ	Ionic strength.
μ_c	Ionic strength (for concentrations).
ν	Number of ions formed by dissociation of one molecule.
Δ	Increment.

Small cap roman: molal quantities, thus n .

Small cap roman with bar: Partial molal quantity, thus \bar{n} .

Subscript ₁ (resp. ₂) identifies solvent (resp. solute).

UNITS AND VALUES OF CONSTANTS USED*

1 cal.	4.182 joules.
T	$t + 273.1$.
R	82.07 cm ³ -atm. per deg. K.
R	1.9885 cal. per deg. K.
V	(for 1 mole of a perfect gas) 22 412 cm ³ at 1 atm. and 273.1°K.
F	96 494 coulombs per equiv.
F	23 074 cal. per volt equiv.

All pressures are expressed in atmospheres, all temperatures in degrees absolute, all electromotive forces in volts and all energy quantities in calories (*v. supra*) unless otherwise expressly stated. When making further transformations of the data, it is important to use only the constants and data of this section.

FREE ENERGY DATA

In general, the accuracy of the free energy equations may be judged by the constancy of the quantity I where this has been tabulated. The lack of a definite trend with a variation in temperature indicates that the choice of the particular form of substances taking part in the reaction and the values of the ΔH and ΔC_p are probably substantially correct. The individual variations indicate the degree of precision of the experimental measurements. Since many of the derived values involve addition and subtraction of other equations, it is not possible, at this time, to give the probable error, and the number of significant figures given should not be interpreted as an indication of the accuracy. Where "revised" values are indicated, it is usually necessary to use the unrevised (885) values, when these are to be combined with other equations in this section.

The free energies are given in the form

$$\Delta F^0 = \Delta H_0^0 - \Delta \Gamma_0^0 T \ln T - \frac{1}{2} \Delta \Gamma'^0 T^2 - \frac{1}{6} \Delta \Gamma''^0 T^3 - \dots + IT \quad (1)$$

where $\Delta \Gamma$, $\Delta \Gamma'$ and $\Delta \Gamma''$, etc., are the coefficients in the algebraic expression for the increase in heat capacity of the reaction.

We thus have

$$\Delta H^0 = \Delta H_0^0 + \Delta \Gamma_0^0 T + \frac{1}{2} \Delta \Gamma'^0 T^2 + \frac{1}{6} \Delta \Gamma''^0 T^3 \quad (2)$$

$$\Delta S^0 = \Delta \Gamma_0^0 (1 + \ln T) + \Delta \Gamma'^0 T + \frac{1}{2} \Delta \Gamma''^0 T^2 + \dots - I \quad (3)$$

The superscript ⁰ on the quantities ΔF , ΔH , ΔS indicates that the quantity is that for a stated or implied reaction in which all chemical substances involved are assumed to be at unit activity, at a fugacity of 1 atm. (or, when specifically so stated, at a pressure of 1 atm.), or hypothetical unit concentration. Where the reaction is not explicitly stated it is assumed to be the reaction of formation of a stated substance out of its elements in their standard states. The standard state of an element is that state to which the value $\Delta F^0 = 0$ is assigned in the tables, the pressure being always one atm. unless otherwise specifically stated. When no standard state is thus indicated in the tables, the "ordinary" solid form of the element is assumed.

In writing the equilibrium constant, K , the activities of the substances appearing on the right of the reaction as written always appear in the numerator. For gases the units are always atmospheres, and for solutes the units are always mole fractions, or moles per 1000 g of water. For the constant K so defined, $\Delta F^0 = -RT \ln K$.

* Note that these are not the accepted I. C. T. values (see Vol. I, p. 17). The data of the present section form a consistent whole but cannot be readily combined with other data in I. C. T.

S	Entropie.
T	Température absolue.
V	Volume.
w	Masse molale.
γ	Coefficient d'activité.
μ	Force ionique.
μ_c	Force ionique (pour concentrations).
ν	Nombre d'ions formées par dissociation d'un molécule.
Δ	Incrément.

Petite majuscule romaine: Quantités moléculaires, ainsi n .

Petite majuscule romaine avec barre: Quantité moléculaire partielle, ainsi \bar{n} .

L'indice ₁ (resp. ₂) identifie le solvant (resp. le corps dissous).

UNITÉS ET VALEURS DES CONSTANTES UTILISÉES*

1 cal.	4,182 joules.
T	$t + 273,1$.
R	82,07 cm ³ -atm. par deg. K.
R	1,9885 cal. par deg. K.
V	(pour une molécule gramme d'un gaz parfait) 22 412 cm ³ à 1 atm. et à 273, 1°K.
F	96 494 coulombs par equiv.
F	23 074 cal. par volt equiv.

Toutes les pressions sont exprimées en atmosphères, toutes les températures en degrés absolus, toutes les forces électromotrices en volts et toutes les quantités d'énergie en calories (*v. ci-dessus*), à moins d'une autre indication. Lorsqu'on veut effectuer des transformations ultérieures des données, il est important de n'utiliser que les constantes et les données de cette section.

DONNÉES RELATIVES À L'ÉNERGIE LIBRE

En général, on peut juger de la précision des équations relatives à l'énergie libre par la constance de la quantité I en consultant la table où celle-ci est mentionnée. Le manque d'une tendance définie avec la variation de la température indique que le choix de la forme particulière des substances prenant part à la réaction et des valeurs de ΔH et ΔC_p est probablement réellement exact. Les variations individuelles indiquent le degré de précision des mesures expérimentales. Comme plusieurs des valeurs dérivées comportent l'addition et la soustraction d'autres équations, il n'est pas possible, pour le moment, de donner l'erreur probable et le nombre de chiffres significatifs donnés ne doit pas être interprété comme une indication de la précision. Lorsque des valeurs "revised" sont indiquées, il est ordinairement nécessaire d'utiliser les valeurs non révisées (885), lorsque celles-ci doivent être combinées avec d'autres équations de la section.

Les énergies libres sont données sous la forme

$$\Delta F^0 = \Delta H_0^0 - \Delta \Gamma_0^0 T \ln T - \frac{1}{2} \Delta \Gamma'^0 T^2 - \frac{1}{6} \Delta \Gamma''^0 T^3 - \dots + IT \quad (1)$$

où $\Delta \Gamma$, $\Delta \Gamma'$ et $\Delta \Gamma''$, etc., sont les coefficients dans l'expression algébrique de l'augmentation de la capacité calorifique de la réaction.

On a ainsi

$$\Delta H^0 = \Delta H_0^0 + \Delta \Gamma_0^0 T + \frac{1}{2} \Delta \Gamma'^0 T^2 + \frac{1}{6} \Delta \Gamma''^0 T^3 \quad (2)$$

$$\Delta S^0 = \Delta \Gamma_0^0 (1 + \ln T) + \Delta \Gamma'^0 T + \frac{1}{2} \Delta \Gamma''^0 T^2 + \dots - I \quad (3)$$

L'exposant ⁰ sur les quantités ΔF , ΔH , ΔS , indique que la quantité est celle se rapportant à une réaction établie ou implicite, dans laquelle toutes les substances chimiques engagées sont supposées être à l'activité unité, à une fugacité d'une atmosphère, (ou, lorsque cela est établi spécifiquement ainsi, à une pression d'une atm.), ou à une concentration unité hypothétique. Lorsque la réaction n'est pas établie explicitement, il s'agit d'une réaction de formation d'une substance donnée à partir de ses éléments dans leur état type. L'état type d'un élément est l'état pour lequel la

* À noter que celles-ci ne sont pas les valeurs I. C. T. acceptées (voir Vol. I, p. 17). Les données de la présente section constituent un tout consistant, mais elles ne peuvent être directement combinées avec les autres données dans les I. C. T.

In some cases we use equilibrium functions (K_m) in which the molality of the substances or ions is used instead of the activity, and others (K_c) in which the concentrations (moles per liter) of the substances in solution are used instead of the activities. In still others we have used special functions (K'_m or K'_c) in which activities are used for all the substances except the ions present. The concentration of a gas is never used in these expressions. See Lewis and Randall (885), Randall and Vietti (1192), Randall (1170.5).

ACTIVITY COEFFICIENTS

In the case of all reactions involving only ions on the right-hand side of the equation, and a few others, the various equilibria are transformed in such a way that $(\log \gamma + \text{a constant})$ and $\mu^{1/2}$ are given in the tables. By a simple graph of these quantities interpolations and comparisons may be made, and by superimposition of the curves so obtained upon the corresponding curves for suitable reference salts made upon the same scale, the extrapolation to unit activity-coefficient can be easily made, and when these extrapolated numbers become available the activity coefficient of the particular pair of ions may be found by subtraction of $\log p.f.$ (given in a few cases) from the value of $(\log \gamma + \text{a constant})$. The activity coefficient for concentration, the ionic strength for concentration, etc., are defined in the sense used by Randall and Vietti (1192), namely, the product of the activity-coefficient-for-concentration by the concentration gives the activity (defined with reference to molalities).

$$\log \gamma + \text{const.} = \log \gamma - E^0/(0.00019844\nu T/N) = -E/(0.00019844\nu T/N) + \log (1/m_{\pm}) \quad (4)$$

where E^0 and E are the standard and measured electromotive forces, N the number of equivalents, and m_{\pm} the mean molality of the ions studied in the cell.* Or

$$\log \gamma + \text{const.} = (1/\nu) \log p + \log (1/m_{\pm}) \quad (5)$$

where p is the vapor pressure of the solute. Or

$$\log \gamma + \text{const.} = (1/\nu) \log x_2 + \log (1/m_{\pm})$$

where x_2 is the mole fraction of the solute in a second immiscible solvent. Or

$$\log \gamma + \text{const.} = \log (1/m_{\pm})$$

where m_{\pm} is the mean molality of the ions in equilibrium with the pure solid (solubility). Or

$$\log \gamma + \text{const.} = (1/\nu) \log (1/K'_m),$$

where K'_m is an equilibrium function in which activities are substituted for all substances taking part in the reaction (usually undissociable substances or gases) except the pair of ions considered. (See CaCO_3 (calcite) + $\text{H}_2\text{CO}_3(\text{aq}) = \text{Ca}^{++} + 2\text{HCO}_3^-$, p. 296.)

INHALT DIESER ABTEILUNG

Zu dieser Abteilung gehören alle Gleichgewichte bis auf solche welche in den vorhergehenden behandelt worden sind. Die Abteilung enthält auch verschiedene thermodynamische Daten wie partielle molare Grössen, Aktivitätskoeffizienten, Molwärmen der Substanzen, usw., wenn dieselben mit anderen Daten verbunden sind.

Die Tabellen sind nicht so vollständig wie man sich wünschen könnte. Es wurde versucht, möglichst verschiedenartige Systeme zu behandeln; jenen Systemen, welche in der Literatur nicht so ausführlich diskutiert worden sind, ist mehr Raum gewidmet als den gewöhnlicheren. Das Weglassen einer Tabelle, oder die blosser Zitierung einer Arbeit ist nie als eine Unterschätzung der Qualität oder Wichtigkeit der Daten zu betrachten.

ANORDNUNG

1. Die Systeme und Reaktionen sind nach der Standardanordnung (siehe Bd. III, S. viii) geordnet, dem Reaktionsteilnehmer mit der höchsten Schlüsselformel entsprechend. So sind zum

valeur $\Delta F^0 = 0$ est assignée dans les tables, la pression étant toujours une atm. à moins d'une autre indication. Lorsque aucun état type n'est indiqué ainsi dans les tables, il s'agit de la forme "ordinaire" solide de l'élément.

En écrivant la constante d'équilibre, K , les activités des substances se trouvant au deuxième membre de la réaction sont écrites au numérateur comme d'habitude. Pour les gaz, les unités sont toujours atmosphères, et pour les corps dissous, les unités sont toujours fractions moléculaires grammes, ou molécules grammes pour 1000 g d'eau. Pour la constante K , ainsi définie, $\Delta F^0 = -RT \ln K$.

Dans quelques cas on s'est servi des fonctions d'équilibre (K_m), dans lesquelles la molalité des substances ou des ions est utilisée à la place de l'activité, et d'autres fonctions (K_c) dans lesquelles les concentrations (mol gr. par litre) des substances en solutions sont utilisées à la place des activités. Dans d'autres cas encore, il a été employé des fonctions spéciales (K'_m ou K'_c) dans lesquelles les activités ont été utilisées pour toutes les substances à l'exception des ions présents. La concentration d'un gaz n'est jamais utilisée dans ces expressions. Voir Lewis et Randall (885), Randall et Vietti (1192), Randall (1170.5).

COEFFICIENTS D'ACTIVITÉ

Dans le cas de toutes les réactions ne comportant que des ions au deuxième membre de l'équation, et dans quelques autres cas, les divers équilibres sont transformés de telle façon que $(\log \gamma + \text{une constante})$ et $\mu^{1/2}$ soient donnés dans les tables. Au moyen d'un simple graphique de ces quantités, on peut faire des interpolations et des comparaisons et par superposition des courbes ainsi obtenues avec les courbes correspondantes de sels de référence convenables, dessinées à la même échelle, on peut effectuer facilement l'extrapolation pour le coefficient unité d'activité; lorsque ces nombres extrapolés sont disponibles, on trouvera le coefficient d'activité de la paire particulière d'ions en soustrayant $\log p.f.$ (donné dans quelques cas) de la valeur de $(\log \gamma + \text{une constante})$. Le coefficient d'activité pour la concentration, la force ionique pour la concentration, etc., sont définis suivant le sens utilisé par Randall et Vietti (1192), c'est-à-dire, le produit du coefficient d'activité pour la concentration, par la concentration donne l'activité (définie avec référence aux molalités).

$$\log \gamma + \text{constante} = \log \gamma - E^0/0,00019844\nu T/N = -E/(0,00019844\nu T/N) - \log (1/m_{\pm}) \quad (4)$$

où E^0 et E sont respectivement les forces électromotrices types et mesurées, N le nombre des équivalents et m_{\pm} la molalité moyenne des ions étudiés dans la pile.* Ou

$$\log \gamma + \text{constante} = (1/\nu) \log p + \log (1/m_{\pm}) \quad (5)$$

où p est la pression de vapeur du corps dissous. Ou

$$\log \gamma + \text{constante} = (1/\nu) \log x_2 + \log (1/m_{\pm})$$

où x_2 est la fraction moléculaire du corps dissous dans un deuxième dissolvant non miscible. Ou

$$\log \gamma + \text{constante} = \log (1/m_{\pm})$$

où m_{\pm} est la molalité moyenne des ions en équilibre avec le solide pur (solubilité). Ou

$$\log \gamma + \text{constante} = (1/\nu) \log (1/K'_m)$$

où K'_m est une fonction d'équilibre dans laquelle les activités sont substituées à toutes les substances prenant part à la réaction (ordinairement des substances non dissociables ou des gaz), à l'exception de la paire d'ions considérés. (Voir CaCO_3 (calcite) + $\text{H}_2\text{CO}_3(\text{aq}) = \text{Ca}^{++} + 2\text{HCO}_3^-$, p. 296.)

ARGOMENTI COMPRESI IN QUESTO CAPITOLO

Questo capitolo comprende tutti gli equilibri chimici, eccettuati quelli dei quali si è parlato in capitoli precedenti. Vi sono pure contenuti dati termodinamici diversi, come quantità molari parziali, coefficienti di attività, capacità termiche, ecc.

* En général $\Delta F = -NEF$.

* In general $\Delta F = -NEF$.

Beispiel in der Reaktion

die folgenden als Schlüsselnummern zu nehmen:

Pb, 23; PbO₂, 23-12; H₂SO₄, 8-22-14; PbSO₄, 23-8-14;
H₂O, 22-1.

Die höchste Schlüsselnummer ist jene für PbSO₄, 23-8-14, und diese Reaktion wird deswegen unter PbSO₄ angegeben; man kann sie auffinden, indem man die Blätter des Bandes umschlägt, bis 23 als das erste Glied der Schlüsselnummern, die am oberen Ende jeder rechten Seite sind, erscheint. Nachdem die richtige Abteilung so gefunden worden ist, kann man das erwünschte System oder die erwünschte Reaktion nach Besichtigung festsetzen.

2. Wo es sich um eine Zustandswahl für die gegebene Substanz handelt, ist die Ordnung wie folgt: Gas (g); Flüssigkeit (l); fester Körper (s); in wässriger Lösung (aq); in nicht-wässriger Lösung, Standardanordnung nach Lösungsmitteln.

3. *Wichtige Ausnahmen.*—Feste Hydrate, Ammine, usw., Krystallwasser oder Krystall-Ammoniak enthaltend, stehen unter dem Lösungsmittel-freien Salz verzeichnet. Krystall-Wasser, -Ammoniak, usw., sind deswegen im Schreiben der Schlüsselnummern fortzulassen. (Diese Ausnahmen sind aber für Komplexionen, Komplexkobaltamine, usw., nicht gültig.) Löslichkeitsdaten sind immer unter der Schlüsselnummer des gelösten Stoffes zu finden.

ZEICHEN UND ABKÜRZUNGEN

Im allgemeinen werden die Formelzeichen von Lewis und Randall (885) gebraucht. (Siehe auch die deutsche Übersetzung von Redlich.)

<i>a</i>	Aktivität.
<i>c</i>	Konzentration (Mol pro Liter).
<i>c_±</i>	Geometrisches Mittel der Ionenkonzentrationen.
<i>f</i>	Flüchtigkeit. (Fugazität).
het.	Zwei-Phasen System am reichsten an gelöstem Stoff.
ln	Natürlicher Logarithmus.
log	Dekadischer Logarithmus.
<i>m</i>	Molarer Gehalt (Mol pro 1000 g H ₂ O in vacuo, Molarität).
<i>m_±</i> <i>m_±⁰</i>	} Siehe S. 230.

<i>T</i>	Absolute Temperatur.
<i>V</i>	Volumen.
<i>w</i>	Molare Masse (Molekulargewicht).

Le tabelle però non sono così complete come si potrebbe desiderare. Si è cercato di includervi il maggior numero possibile di tipi di sistemi, e sono stati trattati con maggiore estensione i sistemi non ampiamente discussi nella letteratura, anziché quelli più comuni. Il fatto che qualche tabella sia stata omessa o che dei dati siano stati semplicemente citati non indica nulla rispetto alla qualità e alla importanza di essi.

DISPOSIZIONE

1. I sistemi e le reazioni sono elencate con l'ordinamento standard (vedi Vol. III, p. viii) seguendo l'ordine delle sostanze che hanno la formula-chiave più alta. Così, per esempio, nella reazione

le formule-chiavi sono:

Pb, 23; PbO₂, 23-12; H₂SO₄, 8-22-14; PbSO₄, 23-8-14;
H₂O, 22-1.

La formula-chiave più alta è quella del PbSO₄, 23-8-14 e quindi questa reazione si troverà elencata sotto PbSO₄ e si troverà dove il 23 apparirà come il primo membro dei numeri-chiave che stanno in cima ad ogni pagina di destra. Stabilita a questo modo la sezione si può trovare il sistema di reazione per ispezione.

2. Quando una data sostanza è considerata in diversi stati, allora l'ordine è il seguente: gas (g); liquido(l); solido(s) in soluzione acquosa (aq); in soluzione non acquosa l'ordine è quello standard dei solventi.

3. *Eccezioni Importanti.*—Gli idrati solidi, le ammine, ecc., che contengono acqua, ammoniaca, ecc. "di cristallizzazione" sono elencati sotto la sostanza originaria. L'acqua, l'ammoniaca, ecc., di cristallizzazione dovrà essere tralasciata nello scrivere la formula-chiave. (Queste eccezioni non si riferiscono tuttavia agli ioni complessi, alle cobaltamine complesse, ecc.) I dati di solubilità sono in ogni caso elencati sotto i soluti.

ABBREVIAZIONI E SIMBOLI

In genere viene impiegata l'annotazione di Lewis e Randall (885).

<i>a</i>	Attività.
<i>c</i>	Concentrazioni (moli per litro).
<i>c_±</i>	Media geometrica della concentrazione degli ioni.
<i>f</i>	Fugacità.
het.	Sistema di due fasi più ricco in soluto.
ln	Logaritmo a base e.
log	Logaritmo a base 10.
<i>m</i>	Molarità (moli per 1000 g di H ₂ O, nel vuoto).
<i>m_±</i> <i>m_±⁰</i>	} v. p. 230.
<i>n</i>	
<i>p</i>	Tensione di vapore (in atmosfere).
<i>p.f.</i>	Fattore di proporzionalità (vedi coefficienti di attività).
<i>s</i>	Solubilità (moli per 1000 g H ₂ O, nel vuoto).
<i>s_c</i>	Solubilità (moli per litro).
<i>t</i>	Temperatura, °C.
<i>x</i>	Frazione di mole.
<i>C_p</i>	Capacità termica molare a pressione costante.
<i>C_v</i>	Capacità termica molare a volume costante.
<i>E</i>	Energia interna.
<i>E</i>	Forza elettromotrice.
<i>E⁻</i>	Un grammo atomo di elettricità negativa.
<i>F</i>	Energia libera.
<i>H</i>	Contenuto termico.
<i>I</i>	Costante d'integrazione.
<i>K</i>	Costante di equilibrio (attività) v. p. 230.
<i>K'</i>	Funzione speciale di equilibrio.
<i>K_c</i>	Funzione d'equilibrio espressa in concentrazioni.

γ	Aktivitätskoeffizient.
μ	Ionenstärke.
μ_c	Ionenstärke (für Konzentrationen).
ν	Anzahl Ionen, die bei Dissoziation einer Molekül gebildet werden.
Δ	Zuwachs.
Kleingedruckte lateinische Grossbuchstaben, z. B. π , bedeuten molare Grössen.	
Kleingedruckte lateinische Grossbuchstaben überstrichen, z. B. \bar{H} , bedeuten partielle molare Grössen.	
Index 1 (bezw. 2) entspricht dem Lösungsmittel (bezw. gelöstem Stoff).	

EINHEITEN UND WERTE DER GEBRAUCHTEN KONSTANTEN*

1 cal.	4,182 Joule.
T	$t + 273,1$.
R	82,07 cm ³ -Atm. pro Grad K.
R	1,9885 Kal. pro Grad K.
V	(für einem Mol eines idealen Gases) 22 412 cm ³ bei 1 Atm. und 273,1°K.
F	96 494 Coulomb pro Äquiv.
F	23 074 Kal. pro Volt Äquiv.

Alle Drucke sind in Atmosphären, alle Temperaturen in Grad absolut, alle elektromotorischen Kräfte in Volt, und alle Energiegrössen in Kalorien (*siehe* weiter oben) ausgedrückt, wenn nicht ausdrücklich anders angegeben ist. Bei weiterer rechnerischer Verwendung dieser Daten ist es wichtig nur die Konstanten und Daten dieser Abteilung zu gebrauchen.

DATEN DER FREIEN ENERGIE

Im allgemeinen kann man die Genauigkeit der Gleichungen für die freie Energie nach der Konstanz der Grösse I beurteilen, wenn letztere tabellarisiert ist. Das Ausbleiben einer bestimmten Richtung der Konstante bei einer Temperaturänderung zeigt, dass die Wahl dieser besonderen Formen der Reaktionsteilnehmer, sowohl wie die Werte von ΔH und ΔC_p , wahrscheinlich richtig ist. Die einzelnen Abweichungen zeigen den Präzisionsgrad der experimentellen Messungen. Da viele der abgeleiteten Werte durch Addition und Subtraktion anderer Gleichungen erhalten worden sind, ist es zu dieser Zeit nicht möglich, die Grösse des wahrscheinlichsten Fehlers anzugeben; die Zahl der angegebenen Ziffern soll deswegen nicht als Mass der Genauigkeit genommen werden. Wo "revised" Werte angegeben sind, ist es gewöhnlich nötig dass man die nicht revidierten (⁸⁸⁵) Werte gebraucht, wenn man solche Daten mit anderen der Abteilung kombinieren will.

Die freien Energien sind in folgender Form gegeben

$\Delta F^0 = \Delta H_0^0 - \Delta \Gamma_0^0 T \ln T - \frac{1}{2} \Delta \Gamma'^0 T^2 - \frac{1}{6} \Delta \Gamma''^0 T^3 - \dots + IT$ (1)
wo $\Delta \Gamma$, $\Delta \Gamma'$, $\Delta \Gamma''$, usw., die Koeffizienten in dem algebräischen Ausdruck für die Zunahme des Wärmehalts während der Reaktion sind.

So haben wir

$$\Delta H^0 = \Delta H_0^0 + \Delta \Gamma^0 T + \frac{1}{2} \Delta \Gamma'^0 T^2 + \frac{1}{6} \Delta \Gamma''^0 T^3 \quad (2)$$

$$\Delta S^0 = \Delta \Gamma_0^0 (1 + \ln T) + \Delta \Gamma'^0 T + \frac{1}{2} \Delta \Gamma''^0 T^2 + \dots - I \quad (3)$$

Der Index ⁰ an den Grössen ΔF , ΔH , ΔS bedeutet dass die Grösse zu einer angegebenen oder angedeutenden Reaktion gehört, in welcher alle teilnehmenden chemischen Substanzen bei Aktivität Eins, bei einer Flüchtigkeit von 1 Atm. (oder, wenn es besonders angegeben ist, bei einem Druck von 1 Atm.), oder bei

* Es ist zu beachten dass diese Werte nicht diejenigen sind welche sonst in den I. C. T. (*siehe* Bd. I, S. 17) angenommen wurden. Die Daten dieser Abteilung bilden unter sich ein einheitliches System, aber können nicht leicht mit anderen Daten in den I. C. T. kombiniert werden.

K_m	Funzione d'equilibrio espressa in molarità.
K_p	Funzione d'equilibrio in termini delle pressioni parziali.
\bar{L}	Contenuto termico molare relativo parziale.
M	Molare.
P	Pressione totale o tensione di vapore in atmosfere.
R	Costante dei gas.
S	Entropia.
T	Temperatura assoluta.
V	Volume.
w	Massa molale.
γ	Coefficiente di attività.
μ	Forza ionica.
μ_c	Forza ionica per le concentrazioni.
ν	Numero degli ioni formati per la dissociazione d'una molecola.
Δ	Incremento.
Let. cap. rom. piccola. Quantità molari, per esempio π .	
Let. cap. rom. pic. sbarrata. Quantità molari parziali, per esempio $\bar{\pi}$.	
L'indicazione sottoscritta 1 (risp. 2) si riferisce al solvente (risp. soluto).	

UNITÀ E VALORI DELLE COSTANTI IMPIEGATE*

1 cal.	4,182 joules.
T	$t + 273,1$.
R	82,07 cm ³ -atm. per grado K.
R	1,9885 cal. per grado K.
V	(per una mole di gas perfetto) 22 412 cm ³ a 1 atm. e 273,1°K.
F	96 494 coulombs per equiv.
F	23 074 cal. per volt equiv.

Tutte le pressioni sono espresse in atmosfere, tutte le temperature in gradi assoluti, tutte le forze elettromotrici in volte e tutte le quantità di energia in calorie (*v. sopra*) a meno che non venga espressamente altrimenti indicato. Nel fare ulteriori trasformazioni dei dati è importante che vengano usati solo le costanti e i dati di questo capitolo.

DATI SULL'ENERGIA LIBERA

In genere, l'accuratezza delle equazioni dell'energia libera può essere giudicata dalla costanza di I , dove questo è riportato. Quando il valore di I non mostra tendenza a variare con la temperatura deve ritenersi che la scelta delle forme particolari delle sostanze prendenti parte alla reazione, e i valori di ΔH e ΔC_p sono da ritenersi con probabilità sostanzialmente corretti. Le singole variazioni indicano il grado di accuratezza delle misure sperimentali. Siccome molti dei valori dedotti implicano la addizione e la sottrazione di altre equazioni, non è possibile, oggi, indicare l'errore probabile; non bisogna prendere quindi come indice di accuratezza il numero delle cifre riportate. Dove sono riportati valori "revised" bisognerà usare i valori non corretti (⁸⁸⁵) quando dovranno essere combinati con altre equazioni di questo capitolo.

Le energie libere sono date nella forma

$$\Delta F^0 = \Delta H_0^0 - \Delta \Gamma_0^0 T \ln T - \frac{1}{2} \Delta \Gamma'^0 T^2 - \frac{1}{6} \Delta \Gamma''^0 T^3 - \dots + IT \quad (1)$$

dove $\Delta \Gamma$, $\Delta \Gamma'$ e $\Delta \Gamma''$, ecc., sono i coefficienti dell'incremento della capacità termica della reazione nell'espressione algebrica.

Così si ha:

$$\Delta H^0 = \Delta H_0^0 + \Delta \Gamma^0 T + \frac{1}{2} \Delta \Gamma'^0 T^2 + \frac{1}{6} \Delta \Gamma''^0 T^3 \quad (2)$$

$$\Delta S^0 = \Delta \Gamma_0^0 (1 + \ln T) + \Delta \Gamma'^0 T + \frac{1}{2} \Delta \Gamma''^0 T^2 + \dots - I \quad (3)$$

* Nota bene che questo *non sono* i valori accettati dalle I. C. T. (*vedi* Vol. I, p. 17). I dati di questa sezione formano un tutto unico, ma non possono essere combinati senz'altro con gli altri dati delle I. C. T.

einer hypothetischen Konzentration Eins angenommen sind. Ist die Reaktion nicht ausdrücklich angegeben, so wird angenommen, dass es sich um jene Reaktion handelt, in welcher eine gegebene Substanz aus ihren Elementen in dessen Normalzuständen gebildet wird. Der Normalzustand ist jener, welchem in den Tabellen der Wert $\Delta F^0 = 0$ zugeteilt ist, wobei der Druck immer 1 Atm. sein soll, falls kein anderer Wert dafür besonders angegeben wird. Im Fall, dass kein Normalzustand in den Tabellen derart angegeben ist, nimmt man den "gewöhnlichen" festen Zustand des Elementes an.

Die Gleichgewichtskonstante, K , ist immer so definiert, dass die Aktivitäten der Substanzen, welche rechts in der geschriebenen Reaktionsgleichung erscheinen, im Zähler stehen. Für Gase sind die Einheiten immer Atmosphäre, und für gelöste Stoffe immer Molenbrüche, oder Mol pro 1000 g Wasser. Für die Konstante K auf diese Weise definiert, ist $\Delta F^0 = -RT \ln K$.

In einigen Fällen gebrauchen wir Gleichgewichtsfunktionen (K_m), in welchen, anstatt Aktivitäten, die Molarität der Substanzen oder Ionen gebraucht wird, und andere (K_c) in welchen die Aktivitäten durch Konzentrationen (Mol pro Liter) ersetzt sind. In noch anderen Fällen haben wir Spezialfunktionen (K'_m oder K'_c) gebraucht, in welchen für alle Substanzen, ausser den Ionen, Aktivitäten benutzt worden sind. Die Konzentration eines Gases kommt in solchen Ausdrücken nie vor. *Siehe* Lewis und Randall (885), Randall und Vietti (1192), und Randall (1170.5).

AKTIVITÄTSKOEFFIZIENTEN

Im Falle aller Reaktionen, welche auf der rechten Seite nur Ionen enthalten, und etlicher anderer, sind die verschiedenen Gleichgewichte so umgeformt, dass $(\log \gamma + \text{Konstante})$ und $\mu^{1/2}$ in den Tabellen angegeben sind. Durch einfache graphische Auftragung dieser Grössen, kann man Interpolieren und Vergleiche ausführen; durch Auflegen der so erhaltenen Kurven auf entsprechende Kurven in demselben Massstabe für passende Bezugssalze kann man leicht zum Aktivitätskoeffizienten Eins extrapolieren. Wenn diese extrapolierten Grössen vorhanden sind, kann der Aktivitätskoeffizient für das betreffende Ionenpaar durch Subtraktion von $\log p.f.$ (in einigen Fällen angegeben) von dem Wert der Grösse $(\log \gamma + \text{Konstante})$ erhalten werden. Der Aktivitätskoeffizient für Konzentration, die Ionenstärke für Konzentration, usw., sind in dem Sinne Randall und Vietti (1192) definiert, nämlich so, dass die Aktivität (in Bezug auf Molaritäten definiert) gleich ist dem Produkt von dem besagten Konzentrationsaktivitätskoeffizient und der Konzentration.

$$\log \gamma + \text{Konstante} = \log \gamma - E^0/(0,00019844 \nu T/N) = E/(0,00019844 \nu T/N) + \log (1/m_{\pm}) \quad (4)$$

wo E^0 die normalen und E die gemessenen elektromotorischen Kräfte, N die Nummer der Äquivalenten, und m_{\pm} die mittlere Molarität der Ionen in der Kette bedeutet*. Oder

$$\log \gamma + \text{Konstante} = (1/\nu) \log p + \log (1/m_{\pm}) \quad (5)$$

wo p der Dampfdruck des gelösten Stoffes ist. Oder

$$\log \gamma + \text{Konstante} = (1/\nu) \log x_2 + \log (1/m_{\pm})$$

wo x_2 den Molenbruch gelösten Stoffes in einem zweiten unvermischbaren Lösungsmittel bedeutet. Oder

$$\log \gamma + \text{Konstante} = \log (1/m_{\pm})$$

wo m_{\pm} die mittlere Molarität der Ionen in Gleichgewicht mit dem reinen festen Stoffe (Löslichkeit) ist. Oder

$$\log \gamma + \text{Konstante} = (1/\nu) \log (1/K'_m)$$

wo K'_m eine Gleichgewichtsfunktion ist, in welcher für alle Reaktionsteilnehmer (am gewöhnlichsten undissoziierbare Stoffe oder Gase) bis auf das betrachtete Ionenpaar, Aktivitäten eingesetzt worden sind. (*Siehe* $\text{CaCO}_3(\text{Calcite}) + \text{H}_2\text{CO}_3(\text{aq}) = \text{Ca}^{++} + 2\text{HCO}_3^-$, S. 296.)

* In allgemeinen $\Delta F = NEF$.

Il contrassegno 0 sulle quantità ΔF , ΔH , ΔS , indica che esse si riferiscono ad una reazione in cui tutte le sostanze che vi partecipano vengono considerate a una attività unitaria, a una fugacità di 1 atm. (oppure, quando sia specificamente indicato, alla pressione di 1 atmosfera) o a una concentrazione unitaria ipotetica. Quando la reazione non è esplicitamente indicata, si suppone sia quella di formazione di una data sostanza dagli elementi, nei loro stati standard. Lo stato standard di un elemento è quello per il quale nelle tabelle viene dato il valore $\Delta F^0 = 0$, la pressione essendo sempre di 1 atm. salvo che non venga altrimenti indicato. Quando nelle tabelle non è indicato nessuno stato standard, si tratta della forma solida "ordinaria" dell'elemento.

Nello scrivere la costante di equilibrio, K , le attività delle sostanze del membro di destra della reazione, come essa viene comunemente scritta, appaiono sempre al numeratore. Per i gas le unità sono sempre atmosfere, e per i soluti frazioni di moli o moli per 1000 g di acqua. Per la costante K così definita, $\Delta F^0 = -RT \ln K$.

In alcuni casi è fatto uso di funzioni di equilibrio (K_m) nelle quali invece dell'attività si impiega la molarità delle sostanze o dei ioni, in altri casi (K_c) nelle quali le concentrazioni (moli per litro) delle sostanze in soluzioni sono impiegate invece dell'attività. In altri casi sono state impiegate speciali funzioni (K'_m , o K'_c) nelle quali le attività sono usate per tutte le sostanze tranne che per gli ioni presenti. La concentrazione di un gas non viene mai impiegata in queste espressioni. *Vedi* Lewis e Randall (885), Randall e Vietti (1192), Randall (1170.5).

COEFFICIENTI DI ATTIVITÀ

Nel caso delle reazioni che implicano solo gli ioni del membro di destra dell'equazione, e in pochi altri casi, i vari equilibri vengono trasformati in modo che nelle tabelle sono riportati $(\log \gamma + \text{una costante})$ e $\mu^{1/2}$. Con un semplice grafico, si potranno fare interpolazioni e confronti. Sovrapponendo le curve così ottenute ad altre corrispondenti (di sali di riferimento opportunamente scelti, e disegnate sulla stessa scala) si può facilmente fare l'estrapolazione rispetto al coefficiente di attività unitaria. Quando si abbiano questi valori estrapolati si può trovare il coefficiente di attività di questa particolare coppia di ioni sottraendo $\log p.f.$ (dato in pochi casi) dal valore di $(\log \gamma + \text{una costante})$. Il coefficiente di attività per concentrazione, la forza ionica per concentrazione, ecc., sono definite nel senso in cui sono state impiegate da Randall e Vietti (1192), cioè il prodotto del coefficiente d'attività per concentrazione moltiplicato per la concentrazione dà l'attività (definita riferendosi alle molarità).

$$\log \gamma + \text{const.} = \log \gamma - E^0/(0,00019844 \nu T/N) = -E/(0,00019844 \nu T/N) + \log (1/m_{\pm}) \quad (4)$$

dove E^0 e E sono le forze elettromotrici standard e misurate, N il numero degli equivalenti e m_{\pm} la molarità media degli ioni studiati nella cella.* Oppure

$$\log \gamma + \text{const.} = (1/\nu) \log p + \log (1/m_{\pm}) \quad (5)$$

dove p è la tensione di vapore del soluto. Oppure

$$\log \gamma + \text{const.} = (1/\nu) \log x_2 + \log (1/m_{\pm})$$

dove x_2 è la frazione molare del soluto in un secondo solvente immiscibile. Oppure

$$\log \gamma + \text{const.} = \log (1/m_{\pm})$$

dove m_{\pm} è la molarità media degli ioni in equilibrio con li solido puro (solubilità). Oppure

$$\log \gamma + \text{const.} = (1/\nu) \log (1/K'_m),$$

dove K'_m è una funzione d'equilibrio nella quale si sono sostituite le attività per tutte le sostanze che prendono parte alla reazione (generalmente sostanze indissociabili o gas) eccettuata la coppia di ioni presa in considerazione. (*Vedi* $\text{CaCO}_3(\text{calcite}) + \text{H}_2\text{CO}_3(\text{aq}) = \text{Ca}^{++} + 2\text{HCO}_3^-$, p. 296.)

* In generale $\Delta F = NEF$.

263.1	0.737	281.1	2.145
$\Delta H = 52\,980$			

Maximum loss in weight at 298.1°K over H_2SO_4 (916); for the reaction, $\text{Th}(\text{SO}_4)_2 \cdot 8\text{H}_2\text{O} = \text{Th}(\text{SO}_4)_2 \cdot 4\text{H}_2\text{O} + 4\text{H}_2\text{O}$, Koppel (787) gives $\log P' = \log P - 3381/4.606T + 2.3286$. $P = 0.04154$ at $T = 303.1^\circ\text{K}$ and $P = 0.08044$ at $T = 315.1^\circ\text{K}$

Maximum loss in weight at 298.1°K over H_2SO_4 (916). The water is lost continuously at first, then suddenly at the change to dihydrate. This change to the dihydrate is the same for the crystalline and microcrystalline form, whence the two forms are identical (594)

328.8	0.0095	384.1	0.257
352.7	0.0439	$\Delta H = 27\ 100$	

The decomposition exhibits a continuous series of solid solutions, whose dissociation points lie very near one another. The following results are for $P = 0.953$ atm.:

Moles NH_3	<i>T</i>	Moles NH_3	<i>T</i>
6.00	333.6	4.5	341.1
5.60	339.1	4.05	341.6
5.1	340.1	$\Delta H = 22\ 040$	

But the pressure is dependent upon the previous history. Fresh $\text{ZnBr}_2 \cdot 6\text{NH}_3$ dissociates at 335.1°K; a day old at 333.6°K (388). Of the three vapor pressure curves of (104, 379, 388), the first two only agree fully and show $P = 1.00$ at 341.6, and $P = 0.132$ at 304.6

* Calculated by Randall and Nielsen (1186) from ΔH_0^0 determined from vapor pressure data. Whence: $\Delta F^0 = 101\,700 - 9.5T \ln T + 0.004T^2 + 25.13T$; $\Delta H_{298.1}^0 = 104\,180$; $\Delta F_{298.1}^0 = 93\,410$.

Randall and Nielsen (1186) also calculated from above for $\text{Cu(s)} = \text{Cu(g)}$, $\Delta S_{298.1}^0 = 45.95$; and from Lewis, Gibson and Latimer (868), Cu(s) , $S_{298.1}^0 = 8.18$; and (859) Cu(g) , $S_{298.1}^0 = 38.12$ (from theory of ultimate rational units); $\Delta S_{298.1}^0 = 29.94$; or for $\text{Cu(l)} = \text{Cu(g)}$, $\Delta S_{298.1}^0 = 20.12$.

Using this value of $\Delta S_{298.1}^0$ and above values of the vapor pressure (1186) calculated values for ΔH_0^0 (average 62 440), and values for $\log P$ are consistent with the following equation. These values of $\log P$ are probably more reliable than the experimental values above. $\Delta H_0^0 = 62\,240$ gives $\Delta H_{2414.1}^0 = 62\,060$ in fair agreement with $\Delta H = 66\,900$ calculated by Hildebrand (622).

MnCO_3 is always deposited hydrated and cannot be dehydrated without almost complete decomposition. The value of the CO_2 pressure depends upon the amount of retained water and is reproducible for equal amounts of water. For example, for 2.5% water, $P = 0.0012$ atm. at $T = 523.1^\circ\text{K}$, and for 2.0% water, $P = 0.004$ atm. at $T = 523.1^\circ\text{K}$. The following data are for a mineral containing 4.63% FeO , 39.63% MnO , 12.98% MgO , 0.074% SiO_2 and 41.63% CO_2 :

<i>T</i>	<i>P</i>	<i>T</i>	<i>P</i>

On rapid heating to 430.1°K, no mixed crystals form. On slow heating mixed crystals of the formula $\text{CoCl}_2 \cdot 6\text{NH}_3 \cdot 2\frac{3}{4}\text{H}_2\text{O}$ - $\text{CoCl}_2 \cdot 2\text{NH}_3$ appear between 425.1 and 448.1°K. Disregarding mixed crystals, Ephraim (379) obtained the following results:

$\Delta H = 43\,300$, Berthelot

The various forms of CaCO₃, chalk, marble, calcite and aragonite give identical values within the accuracy of the measurements. For pressure values above the eutectic temperature, see the original article.

CaCO₃ with only 0.38% CaO melts at 1662.1°K and has at that temperature a pressure of 1.025 atm.

The formula: $\log P = -11\,355/T - 5.388 \log T + 26.238$, calculated from the experimentally determined values, gives:

T	P^*	T	P^*
773.1	0.000096	1 173.1	1.043
823.1	0.00054	1 223.1	2.075
873.1	0.00242	1 273.1	3.871
923.1	0.00908	1 323.1	6.837
973.1	0.0292	1 373.1	11.499
1 023.1	0.0832	1 423.1	18.092
1 073.1	0.220	1 473.1	28.680
1 123.1	0.489	1 513.1	39.66
1 170.1	1.000		

* In good agreement with these values (1394) finds $P = 0.000004-0.000012$ at 673.1°K; cf. (1154, 1227, 1560).

Johnston (718) worked with very small quantities of materials and found $P = 1$ atm. at 1171.1°K. According to Johnston, P can be calculated according to the formula:

$\log P = -9\,340/T + 1.1 \log T - 0.0012T + 6.001$. By the hastening of equilibrium through the addition of basic compounds such as Li₂CO₃ or Na₂CO₃, Zavrieff (1560) obtained somewhat higher pressures at lower temperatures, but on the other hand lower pressures at the higher temperatures. ($P = 1$

atm. at 1182.1°K.) The values of Riesenfeld (1227) occupy a mean position. He gives the equation: $\log P = -9\,300/T + 1.75 \log T + 0.011916T - 20\,323 \times 10^{-9}T^2 + 82\,446 \times 10^{-13}T^3 + 0.319$; cf. (180, 453, 525, 839).

According to Lebeau (836), mixtures with alkali carbonates have a lower CO₂ pressure than the pure CaCO₃; they also include double carbonates; cf. (837).

$\Delta S_{298.1}^0 = 0.772$; $\Delta H_{298.1} = 38$; $\Delta F_{298.1}^0 = -192$ (1191) from (39)

$\Delta F_{298.1}^0 = 6\,399$ (1191)

$\Delta F_{298.1}^0 = -429$ (1191) from (975)

$\Delta H_{298.1} = -7\,460$; $\Delta F_{298.1}^0 = -306$ (1191)

* $\text{KOH} \cdot \text{H}_2\text{O}$ dissolves $\text{KOH} \cdot \frac{3}{4}\text{H}_2\text{O}$ in very small amounts, therefore the dissociation pressure does not diminish abruptly at the transition point, but diminishes continuously over a very small interval. The same holds for $\text{KOH} \cdot \frac{3}{4}\text{H}_2\text{O}$, which can absorb $\text{KOH} \cdot \frac{1}{2}\text{H}_2\text{O}$ in small amounts.

DEHYDRATION BEHAVIOR OF MINERALS (E)

Potassium Silicate Hydrate

The results of the detailed work of Morey (1016) cannot be interpreted in a short abstract.

Kaolin

The results of Tammann and Pape (1424) cannot be interpreted in a short abstract.

Zeolite (916)

Maximum loss in weight over H_2SO_4 of various concentrations at 298.1°K. The pressure of this hydrate changes continuously with the temperature, the residue remaining clear. The pressure is equal to that of a sulfuric acid solution, for which the compound does not change in weight.

Chabasite (916)

For the following zeolites studied by Tammann (1422), the first column (1) gives the pressure of the H_2SO_4 solution, over which the mineral was kept; the second column (2) gives the maximum loss of water in wt. %; the third column (3) gives how much wt. % of water would not be absorbed again for the rehydration of the dehydrated mineral on standing over the said sulfuric acid solution.

LITERATURE; v. p. 347

SOLUBILITY OF SLIGHTLY SOLUBLE SALTS IN AQUEOUS SOLUTIONS OF ELECTROLYTES

MERLE RANDALL AND WILLIAM V. VIETTI

The Standard arrangement (Vol. III, p. viii) is used throughout this section. Under each A-component, printed in large type, are listed the B-components in the standard order. The A-component is the slightly soluble salt; the B-component is a solute in the aqueous solution.

L'arrangement type (Vol. III, p. viii) est utilisé dans toute cette section. Sous chaque constituant A, imprimé en grands caractères, se trouvent les constituants B disposés en liste suivant l'ordre type. Le constituant A est le sel peu soluble; le constituant B est un corps dissous dans la solution aqueuse.

In diesem Abschnitt ist die Standardanordnung (Bd. III, S. viii) durchweg verwendet. Unter jeder A-Komponente, die in grossen Buchstaben gedruckt ist, folgen die B-Komponenten in Standardanordnung. Die A-Komponente ist der wenig lösliche Salz; die B-Komponente ist ein Körper in der wässrige Lösung.

In tutto questo capitolo si fa uso dell'ordinamento standard (Vol. III, p. viii). Sotto ogni componente A stampato in lettere grosse, sono elencati i componenti B con l'ordinamento standard. Il componente A è il sale poco solubile; il componente B è un soluto nella soluzione acquosa.

SYMBOLS AND ABBREVIATIONS
c_B Concentration of B-component in moles/litre.
c_± Geometric mean of concentration of ions.

SYMBOLES ET ABRÉVIATIONS
c_B Concentration du constituant B en mol. gr./litre.
c_± Moyenne géométrique de la concentration des ions.

SYMBOLE UND ABKÜRZUNGEN
c_B Konzentration der B-Komponente in Mol/Liter.
c_± Geometrisches Mittel der Ionenkonzentrationen.

OPTICAL ROTATORY POWER OF SOLID CRYSTALS

W. T. ASTBURY

Optically active crystals exist in two enantiomorphous forms having equal and opposite rotatory powers for light of a given wave-length. No isotropic substances (cubic crystals) exhibit optical rotation when in solution, but some do when in crystal form. Rotatory power = θ/l where θ is the angle through which the plane of polarization is rotated while plane polarized light is passing a distance l through the crystal in the direction of an optic axis. In some cases the variation of θ/l with the wave-length (λ) can be represented by an empirical Drude equation $\theta/l = k/(\lambda^2 - \lambda_0^2)$. Temperature is stated whenever it is given in the published paper, in other cases it is presumably room temperature. t [T] = centigrade ($^{\circ}\text{C}$) [absolute ($^{\circ}\text{K}$)] temperature. Iso = isotropic (cubic crystal), Uni = uniaxial, Bi = biaxial, d - [L] = dextro- [levo-] rotatory. " d -solutions \rightarrow l -crystals" means that levorotatory crystals form from a solution which is dextrorotatory. Yes [No] means that solutions of the substance are [are not] active. A = accuracy; example: For HIO_3 , $\lambda = 0.436$, $\theta/l = (74.5 \pm 0.7)$ degrees per mm.

X-TABLE, STANDARD ARRANGEMENT

Unit of θ/l and of $A = 1^{\circ}$ per mm; of $\lambda = 1\mu = 10^4 \text{ \AA} = 10^{-4} \text{ cm}$

HIO₃, Iodic acid (12), Bi, No, dimorphous, both forms are orthorhombic bisphenoidal; prism angle of specimen = $86^{\circ}23'$

OPTICAL ROTATORY POWER OF LIQUIDS AND SOLUTIONS¹

THOMAS MARTIN LOWRY

ARRANGEMENT

Arrangement is by classes defined as follows:

Carbon Compounds*

- I. None of the asymmetric carbon atoms forms part of a ring.
- II. At least one asymmetric carbon atom forms part of a ring.
- III. The compound contains no asymmetric carbon atom or contains at least one asymmetric or dissymmetric atom other than carbon.

IV. Substances of unknown, doubtful or complex structure.

Classes I to IV are subdivided according to the number and nature of the asymmetric atoms as follows:

- A_n The molecule contains *n* asymmetric atoms which are attached each to only one other carbon atom.
- B_n The molecule contains *n* asymmetric atoms which are attached each to two other carbon atoms.
- C_n The molecule contains *n* asymmetric atoms which are attached each to three other carbon atoms.
- D_n The molecule contains *n* asymmetric atoms which are attached each to four other carbon atoms.

For substances which fall within two or more of the above subdivisions the higher (in the order D, C, B, A) division receives preference in deciding the arrangement. Within a subdivision the arrangement is in accordance with the value of *n* in the order 1, 2, 3, etc.

SYMBOLS AND ABBREVIATIONS

<i>t</i>	Temperature in degrees centigrade (°C).
λ	Wave length of light expressed in Ångstrom units, <i>i.e.</i> , in tenths of a millimicron ($\frac{1}{10}\mu\mu$) unless otherwise indicated.
<i>D</i>	A wave length of 5893 Å.
α_{λ}^t	Observed rotation at the given values for <i>t</i> .
$[\alpha]_{\lambda}^t$	Specific rotation at the given values for <i>t</i> .
$[M]_{\lambda}^t$	Molecular rotation at the given values for <i>t</i> ($= M \times [\alpha]_{\lambda}^t / 100$).
<i>C</i>	Concentration in grams per 100 cm ³ of solution.
%	Concentration in grams per 100 grams of solution (= Wt. %). (Values in italics.)
<i>d</i>	d_4^t = density at the given value for <i>t</i> referred to water at 4°C, unless otherwise indicated.
2% NaOH (etc.)	2% of solution of NaOH in water.
2% NaOH MeOH	2% of solution of NaOH in methyl alcohol.
<i>M</i>	Moles.
<i>N</i> NaOH	Normal aqueous solution of NaOH (= 1 equivalent/liter).

ARRANGEMENT

Arrangement par classes, définies comme suit:

Composés du carbone

- I. Aucun des atomes de carbone asymétriques ne fait partie d'une chaîne cyclique.
- II. Un atome de carbone asymétrique au moins fait partie d'une chaîne cyclique.
- III. Le composé ne contient aucun atome de carbone ou contient au moins un atome asymétrique ou dyssymétrique autre que carbone.

IV. Substances de structure inconnue, douteuse ou complexe.

Les classes I-IV sont subdivisées comme suit, en accord avec le nombre et la nature des atomes asymétriques:

- A_n La molécule contient *n* atomes asymétriques, chacun de ceux-ci étant seulement relié à un autre atome de carbone.
- B_n La molécule contient *n* atomes asymétriques, chacun de ceux-ci étant relié à deux autres atomes de carbone.
- C_n La molécule contient *n* atomes asymétriques, chacun de ceux-ci étant relié à trois autres atomes de carbone.
- D_n La molécule contient *n* atomes asymétriques, chacun de ceux-ci étant relié à quatre autres atomes de carbone.

Lorsqu'une substance est comprise dans deux ou plusieurs subdivisions ci-dessus, on donnera la préférence à la division supérieure (dans l'ordre D, C, B, A) pour décider de l'arrangement. Dans une subdivision, l'arrangement est réalisé en accord avec les valeurs de *n*, dans l'ordre 1, 2, 3, etc.

SYMBOLES ET ABRÉVIATIONS

<i>t</i>	Température en degrés centigrades (°C).
λ	Longueur d'onde de la lumière exprimée en unités Ångstrom, <i>i.e.</i> , en dixièmes de millimicron ($\frac{1}{10}\mu\mu$) à moins d'une autre indication.
<i>D</i>	Une longueur d'onde de 5893 Å.
α_{λ}^t	Rotation observée pour les valeurs données de <i>t</i> .
$[\alpha]_{\lambda}^t$	Rotation spécifique pour les valeurs données de <i>t</i> .
$[M]_{\lambda}^t$	Rotation moléculaire pour les valeurs données de <i>t</i> ($= M \times [\alpha]_{\lambda}^t / 100$).
<i>C</i>	Concentration en grammes pour 100 cm ³ de solution.
%	Concentration en grammes pour 100 grammes de solution (= Pds. %). (Valeurs en italics.)
<i>d</i>	d_4^t = densité pour la valeur donnée de <i>t</i> par rapport à l'eau à 4°C, à moins d'une autre indication.
2% NaOH (etc.)	Solution de NaOH dans l'eau, à 2%.
2% NaOH MeOH	Solution à 2% de NaOH dans l'alcool méthylique.
<i>M</i>	Molécule-gramme ou mole.
<i>N</i> NaOH	Solution aqueuse normale de NaOH (= 1 équivalent/litre).

Symbols for Solvents

<i>A</i>	= The acid radical under which it is used.
<i>Ac</i>	= (CH ₃ CO) Acetyl.
<i>Bu</i>	= (C ₂ H ₅) Butyl.
<i>En</i>	= (C ₂ H ₅ N ₂) α , β -Ethylenediamine.
<i>Et</i>	= (C ₂ H ₅) Ethyl.

<i>Me</i>	= (CH ₃) Methyl.
<i>Ph</i>	= (C ₆ H ₅) Phenyl.
<i>Pn</i>	= (C ₃ H ₁₀ N ₂) α , β -Propylenediamine.
<i>Py</i>	= (C ₅ H ₅ N) Pyridine.
<i>Tr</i>	= (C ₃ H ₁₀ N ₂) α , γ -Diaminopropane.

¹ This section includes data and bibliography to January 1, 1924. * Sugars and their derivatives (see also Vol. II, p. 334, 353) are classed as open chain compounds. In general, derivatives are listed under the parent compound, even when they contain additional asymmetric atoms.

ANORDNUNG

Die Anordnung erfolgt nach Klassen, die folgendermassen bestimmt sind:

Kohlenstoffverbindungen

I. Keines der asymmetrische Kohlenstoffatome bildet einen Teil eines Ringes.

II. Wenigstens ein asymmetrisches Kohlenstoffatom bildet einen Teil eines Ringes.

III. Die Verbindung enthält kein asymmetrisches Kohlenstoffatom oder enthält wenigstens ein asymmetrisches oder dissymmetrisches Atom von anderer Natur als Kohlenstoff.

IV. Stoffe unbekannter, zweifelhafter oder komplexer Struktur.

Die Klassen I-IV werden weiter geteilt nach der Zahl und Natur der asymmetrischen Atome wie folgt:

A_n Das Molekül enthält *n* asymmetrische Atome, von denen jedes an nur ein anderes Kohlenstoffatom gebunden ist.

B_n Das Molekül enthält *n* asymmetrische Atome, von denen jedes an zwei andere Kohlenstoffatome gebunden ist.

C_n Das Molekül enthält *n* asymmetrische Atome, von denen jedes an drei andere Kohlenstoffatome gebunden ist.

D_n Das Molekül enthält *n* asymmetrische Atome, von denen jedes an vier andere Kohlenstoffatome gebunden ist.

Für Stoffe die in zwei oder mehr der obigen Unterabteilungen fallen, erhält die höhere Abteilung (in der Reihenfolge D, C, B, A) bei der Entscheidung der Anordnung den Vorzug. Innerhalb einer Unterabteilung erfolgt die Anordnung entsprechend dem Werte von *n* in der Reihenfolge 1, 2, 3, usw

ZEICHEN UND ABKÜRZUNGEN

- t* Temperatur in Celsiusgraden (°C).
 λ Lichtwellenlänge ausgedrückt in Ångstrom Einheiten, d.h., in Zehnteln eines Millimikrons ($\frac{1}{10}\mu\mu$), wenn nicht anders angegeben.
D Wellenlänge 5893 Å.
 α_{λ}^t Beobachtete Drehung bei den gegebenen Werten für *t*.
 $[\alpha]_{\lambda}^t$ Spezifische Drehung bei den gegebenen Werten für *t*.
 $[M]_{\lambda}^t$ Molekulare Drehung bei den gegebenen Werten für *t* (= $M \times [\alpha]_{\lambda}^t/100$).
C Konzentration in Gramm pro 100 cm³ Lösung.
 % Konzentration in Gramm pro 100 Gramm Lösung (= Gew. %). (Werte in Kursivschrift.)
d d_4^t = Dichte bei dem gegebenen Wert für *t* (bezogen auf Wasser bei 4°C, wenn nicht anders angegeben).
 2% NaOH (usw.) 2%-ige Lösung von NaOH in Wasser.
 2% NaOH MeOH 2%-ige Lösung von NaOH in Methylalkohol.
M Mole
N NaOH Normale wässrige Lösung von NaOH (= 1 Äquivalent/Liter).

DISPOSIZIONE

La disposizione è fatta secondo classi definite come segue:

Composti del carbonio

I. Nessuno degli atomi di carbonio asimmetrici fa parte di un anello.

II. Almeno un atomo di carbonio asimmetrico fa parte di un anello.

III. Il composto contiene nessuno atomo asimmetrico di carbonio o contiene almeno un atomo asimmetrico o dissimmetrico diverso dal carbonio.

IV. Sostanze di struttura sconosciuta, incerta o complessa.

Le classi I-IV sono suddivise secondo il numero e la natura degli atomi asimmetrici nella maniera seguente:

A_n La molecola contiene *n* atomi asimmetrici i quali sono attaccati ciascuno a un altro atomo di carbonio soltanto.

B_n La molecola contiene *n* atomi asimmetrici i quali sono attaccati ciascuno a due altri atomi di carbonio.

C_n La molecola contiene *n* atomi asimmetrici i quali sono attaccati ciascuno a tre altri atomi di carbonio.

D_n La molecola contiene *n* atomi asimmetrici che sono attaccati ciascuno a quattro atomi di carbonio.

Per le sostanze che rientrano in due o più delle suddivisioni indicate, la divisione più alta (nell'ordine D, C, B, A) ha la preferenza nel decidere la disposizione. Entro ciascuna suddivisione la disposizione è d'accordo con il valore di *n* nell'ordine 1, 2, 3, ecc.

SIMBOLI ED ABBREVIAZIONI

- t* Temperatura in gradi centigradi (°C).
 λ Lunghezza d'onda della luce espressa in unità Ångstrom, i.e., in decimi di millimicron ($\frac{1}{10}\mu\mu$) tranne che non sia altrimenti indicato.
D Una lunghezza d'onda di 5893 Å.
 α_{λ}^t Rotazione osservata ai valori di *t* indicati.
 $[\alpha]_{\lambda}^t$ Rotazione specifica ai valori di *t* indicati.
 $[M]_{\lambda}^t$ Rotazione molecolare ai valori dati per *t* (= $M \times [\alpha]_{\lambda}^t/100$).
C Concentrazione in grammi per 100 cm³ di soluzione.
 % Concentrazione in grammi per 100 grammi di soluzione (= % in peso). (Valori scritti in caratteri italiani.)
d d_4^t = densità al valore di *t* indicato, riferita all'acqua a 4°C salvo che non sia indicato altrimenti.
 2% NaOH (ecc.) 2% di soluzione di NaOH in acqua.
 2% NaOH MeOH 2% di soluzione di NaOH in alcool metilico.
M Moli.
N NaOH Soluzione acquosa normale di NaOH (= 1 equivalente/litro).

Amino acids.

Pilocarpine and related compounds including pilosine, anhydropilosine and pilosinine..... 419

Other cyclic amino acids (nitrogen in ring)..... 420

IICB. The molecule contains two or more asymmetric atoms attached respectively to two and three other carbon atoms.

Hydrocarbons and halides..... 420

Alcohols.

Monohydric alcohols.

Cyclic alcohols not derived directly from terpenes... 420

Terpene alcohols including menthol, homologues and derivatives..... 420

Ethers of menthol..... 421

Esters of menthol, allomenthol and carvomenthol*... 421

Homologues of menthol and their esters..... 428

Polyhydric alcohols..... 428

Ketones..... 428

Carboxylic acids.

Hydroxy acids (including those derived from menthol) and their esters..... 428

Amines.

Monoamines.

Monoamines excluding menthylamine..... 428

Menthylamine, its salts and acyl derivatives*..... 429

N-Menthyl carbamates*..... 430

Menthylcarbimide and carbamides..... 430

Menthylbenzamidines..... 431

Diamines..... 431

Amino acids.

Ecgonine = tropinecarboxylic acid..... 431

Cocaine = methylbenzoylcegonine..... 432

Hydrastine..... 432

Hyoscyamine = isomer of atropine*..... 432

IID. The molecule contains an asymmetric atom forming part of a ring and attached to four other carbon atoms.

Acids..... 432

IIDB. The molecule contains two or more asymmetric atoms attached respectively to two and four other carbon atoms.

Acids..... 433

Amino acids..... 433

IIDC. The molecule contains two or more asymmetric atoms attached respectively to three and four other carbon atoms.

Hydrocarbons and their halogen and nitrogen derivatives. 433

* For further data on these compounds at various temperatures, with other wave lengths, and in various solvents, see the forthcoming article by Professor Lowry, Miscellaneous Publications, Bureau of Standards. No. 118, 1931.

CONTENTS.—(Continued)

Alcohols.		<i>IIDCB. The molecule contains three or more asymmetric atoms attached respectively to two, three and four other carbon atoms.</i>	
Monohydric alcohols other than borneol.....	434	Hydrocarbons and halogen derivatives.....	453
Dihydric alcohols and other dihydroxy compounds.....	434	Alcohols.	
Aldehydes and ketones.		Monohydric alcohols.	
Aldehydes and ketones not related directly to terpenes..	434	Fenchyl alcohol and derivatives*.....	453
Fenchone and derivatives.....	435	Thujyl alcohol and derivatives.....	454
Thujone and derivatives.....	435	Borneol with alkyl and alkylidene derivatives and ethers*.....	454
Epicamphor and derivatives.....	435	Borneol esters and carboxylates*.....	454
Camphor and derivatives.*		Glycols.....	456
Camphor and hydroxy, alkyl and alkylidene derivatives*.....	435	Carboxylic acids.....	456
Imines, oximes and hydrazones of camphor, etc.....	437	Amines.	
Halogen derivatives of camphor, methylcamphor and benzylcamphor*.....	437	Monoamines.	
Nitro derivatives of camphor*.....	438	Fenchylamine, thujylamine and derivatives.....	456
Cyano derivatives of camphor and of alkylcamphors..	438	Bornylamine with alkyl and alkylidene derivatives*...	456
Sulfur derivatives of camphor.		Acyl derivatives of bornylamine.....	457
Sulfides, sulfoxides, etc.....	439	Bornylcarbimide, carbamide and other derivatives of dibasic acids*.....	458
β -Sulfonic derivatives of camphor, methylcamphor, α -chlorocamphor, α -bromocamphor and α , α' -dibromocamphor*.....	439		
π -Sulfonic derivatives of camphor, α -chlorocamphor and α -bromocamphor*.....	440	Class III. Compounds Containing No Asymmetric Carbon Atom or Containing an Asymmetric or Dissymmetric Atom of Some Other Element*	
α -Diketones and derivatives.		Centro-asymmetric carbon compounds.	
Camphorquinone oximes, including isonitrosocamphor*.....	441	Cyclohexylideneacetic acid.....	458
Camphorquinone hydrazones.....	441	Nitrogen derivatives (oximes, etc.).....	459
Cyclic derivatives of camphorquinone.....	442	Derivatives of diphenic acid.....	459
Camphorquinone semicarbazones.....	442	Quinquevalent nitrogen compounds*.....	459
β -Diketones and enolic isomerides.....	442	Phosphorus compounds*.....	461
Carboxylic acids.		Sulfur or selenium compounds.....	461
Monocarboxylic acids.		Silicon compounds.....	461
Fencholic and campholic acids and derivatives*.....	443	Salts of dibenzylpropylethylsilicanemonosulfonic acid....	461
Other monocarboxylic acids.....	443		
Ketonic acids.		Class IV. Substances of Unknown, Doubtful or Complex Structure	
Derivatives of cyclopentanone and cyclopentanol....	444	Hydrocarbons and their simple derivatives.....	461
Camphorcarboxylic acid and isomers, homologues and derivatives*.....	444	Alcohols, esters and ethers.....	462
Other ketonic acids, including their nitriles and derivatives of enol forms.....	445	Cholesterol and derivatives.....	463
Dicarboxylic acids.		Phytosterol and derivatives.....	463
Thujadicarboxylic acid and derivatives.....	446	Sitosterol, coprosterol and derivatives.....	464
Fenchocamphoric acid and derivatives.....	446	Withaniol, lippianol, fungisterin, laserpitin, bombicesterol, taraxasterol, ipuranol and derivatives.....	464
Camphoric acid and camphorates*.....	446	α -Elaterin, antheasterol and derivatives.....	464
Camphorimide, camphoramide and camphoramic acid and derivatives.....	447	Ledum camphor, micromeritol, amyrrin, cedrol, faradiol and derivatives.....	464
Camphoryloxime, hydrazide, etc.....	449	Other alcohols and their derivatives.....	465
Homocamphoric acid and esters.....	449	Aldehydes and ketones.....	465
Other dicarboxylic acids.....	449	Carboxylic acids.	
Amines and imines.		Picrotoxinonic and picrotinic acids and derivatives.....	465
Monoamines and hydroxyamines.....	449	Santonin and related compounds.....	466
Ketoamines and imines.		Other carboxy compounds.....	466
Iminocamphor and derivatives.....	449	Nitrogen compounds, mainly alkaloids.	
Derivatives of aminocamphor.....	450	Morphine and related compounds.....	467
Anilinoamphor and derivatives.....	451	Codeine, thebaine and related compounds.....	468
Camphorylcarbamide, carbimide and carbamic acid with isomers and derivatives.....	451	Cinchonine, cinchonidine and their derivatives*.....	469
Camphorylsemicarbazide, isomers and derivatives....	452	Quinine and isomerides and their derivatives*.....	471
Amino derivatives of epicamphor.....	453	Strychnine, its isomerides and derivatives.....	473
Amino derivatives of methylenecamphor and benzylidenecamphor.....	453	Brucine and its derivatives*.....	473
Amino acids.....	453	Other alkaloids, their derivatives and other substances....	475
Compounds of phosphorus, arsenic and antimony.....	453	Literature.....	478
		Index to Names.....	487

*For further data on these compounds at various temperatures, with other wave lengths, and in various solvents, see the forthcoming article by Professor Lowry, Miscellaneous Publications, Bureau of Standards, No. 118, 1931.

Class I. ORGANIC SUBSTANCES, THE ASYMMETRIC CARBON ATOMS OF WHICH DO NOT FORM PART OF A RING
IB₁. The Molecule Contains One Asymmetric Atom Attached to Two Other Carbon Atoms

SIMPLE HALIDES

Formula	Name	d_4^{20}	$t, ^\circ\text{C}$	$[\alpha]_D$	Lit.
$\text{C}_4\text{H}_9\text{I}$	<i>l</i> -β-Iodobutane.....	1.5970	17	-31.98	(1619)
$\text{C}_5\text{H}_{11}\text{I}$	<i>l</i> -β-Iodopentane.....	1.5067	17	-37.15	(1619)
$\text{C}_6\text{H}_{13}\text{I}$	<i>l</i> -β-Iodoheptane.....	1.4354	17	-38.35	(1619)
$\text{C}_8\text{H}_9\text{Cl}$	<i>l</i> -α-Chloroethylbenzene.....	1.0642	17	-5.80	(1619)
$\text{C}_8\text{H}_{17}\text{Br}$	<i>d</i> -β-Bromooctane.....	1.0895	17	+27.53	(1619)
	<i>l</i> -β-Bromooctane.....		4	-31.07	(1619)
		1.0927 ^{13.8} ₄	13.1	-30.33	
		1.0914 ¹⁷ ₄	17	-27.47	
		1.0805 ²⁶ ₄	30	-29.05	
		1.0688 ³⁷ ₄	37	-28.62	
		1.0532 ⁵³ ₄	50	-27.81	
			92	-25.18	
$\text{C}_8\text{H}_{17}\text{Cl}$	<i>l</i> -β-Chlorooctane.....	0.8628	17	-20.44	(1619)
	<i>d</i> -β-Chlorooctane.....	0.8658	17	+20.40	(1619)
$\text{C}_8\text{H}_{17}\text{I}$	<i>l</i> -β-Iodooctane.....	1.3299	17	-40.56	(1619)
	<i>d</i> -β-Iodooctane.....	1.3314	17	+39.82	(1619)
$\text{C}_9\text{H}_{11}\text{Cl}$	<i>l</i> -α-Chloropropylbenzene.....	1.0430	17	-3.87	(1619)
	<i>d</i> -α-Chloropropylbenzene.....	1.0429	17	+3.79	(1619)
$\text{C}_9\text{H}_{19}\text{Br}$	<i>l</i> -γ-Bromononane.....	1.0897	17	-13.39	(1619)
	<i>d</i> -γ-Bromononane.....	1.0900	17	+12.90	(1619)
$\text{C}_9\text{H}_{19}\text{Cl}$	<i>l</i> -γ-Chlorononane.....	0.8540	17	-8.03	(1619)
	<i>d</i> -γ-Chlorononane.....	0.8588	17	+7.71	(1619)
$\text{C}_9\text{H}_{19}\text{I}$	<i>l</i> -γ-Iodononane.....	1.2873	17	-17.50	(1619)
	<i>d</i> -γ-Iodononane.....	1.2940	17	+17.65	(1619)

ALCOHOLS

MONOHYDROXY ALCOHOLS, THIOLS AND THEIR ESTERS

Methyl carbinols, RCH_2CHOH (1619); cf. (812)

Formula	R	$[\alpha]_D^{20}$
$\text{C}_4\text{H}_{10}\text{O}$	Ethyl	13.87
$\text{C}_5\text{H}_{12}\text{O}$	<i>n</i> -Propyl	13.70
$\text{C}_6\text{H}_{14}\text{O}$	<i>n</i> -Butyl	11.57
$\text{C}_7\text{H}_{16}\text{O}$	<i>n</i> -Amyl	10.32
$\text{C}_8\text{H}_{18}\text{O}$	<i>n</i> -Hexyl	9.76
$\text{C}_9\text{H}_{20}\text{O}$	<i>n</i> -Heptyl	8.99
$\text{C}_{10}\text{H}_{22}\text{O}$	<i>n</i> -Octyl	8.68
$\text{C}_{11}\text{H}_{24}\text{O}$	<i>n</i> -Nonyl	8.13
$\text{C}_{12}\text{H}_{26}\text{O}$	<i>n</i> -Decyl	7.78
$\text{C}_{13}\text{H}_{28}\text{O}$	<i>n</i> -Undecyl	7.22

Ethyl carbinols, $\text{RC}_2\text{H}_5\text{CHOH}$ (1622); cf. (1305)

$\text{C}_4\text{H}_{10}\text{O}$	Methyl	13.87
$\text{C}_6\text{H}_{14}\text{O}$	Propyl	1.97
$\text{C}_7\text{H}_{16}\text{O}$	Butyl	8.13
$\text{C}_8\text{H}_{18}\text{O}$	Amyl	8.22
$\text{C}_9\text{H}_{20}\text{O}$	Hexyl	7.38
$\text{C}_{10}\text{H}_{22}\text{O}$	Heptyl	6.68
$\text{C}_{11}\text{H}_{24}\text{O}$	Octyl	6.25
$\text{C}_{12}\text{H}_{26}\text{O}$	Nonyl	5.97
$\text{C}_{13}\text{H}_{28}\text{O}$	Decyl	6.23
$\text{C}_{14}\text{H}_{30}\text{O}$	Undecyl	5.87
$\text{C}_{15}\text{H}_{32}\text{O}$	Dodecyl	5.53
$\text{C}_{16}\text{H}_{34}\text{O}$	Tridecyl	5.11
$\text{C}_{18}\text{H}_{38}\text{O}$	Pentadecyl	4.77

Isopropyl carbinols, $\text{RC}_3\text{H}_7\text{CHOH}$ (1305, 1620)

$\text{C}_6\text{H}_{12}\text{O}$	Methyl	4.85
$\text{C}_8\text{H}_{14}\text{O}$	Ethyl	15.06
$\text{C}_7\text{H}_{16}\text{O}$	<i>n</i> -Propyl	21.25

Isopropyl carbinols.—(Continued)

Formula	R	$[\alpha]_D^{20}$
$\text{C}_8\text{H}_{18}\text{O}$	<i>n</i> -Butyl	25.64
$\text{C}_9\text{H}_{20}\text{O}$	<i>n</i> -Amyl	22.84
$\text{C}_{10}\text{H}_{22}\text{O}$	<i>n</i> -Hexyl	21.46
$\text{C}_{12}\text{H}_{26}\text{O}$	<i>n</i> -Octyl	18.55
$\text{C}_{14}\text{H}_{30}\text{O}$	<i>n</i> -Decyl	16.15

Other carbinols (1624); cf. (1305)

Formula	Name	$[\alpha]_D^{20}$
$\text{C}_6\text{H}_{14}\text{O}$	<i>d</i> -Methyl <i>tert</i> .-butyl	7.71
$\text{C}_8\text{H}_{10}\text{O}$	<i>d</i> -Methyl phenyl	41.77
$\text{C}_9\text{H}_{12}\text{O}$	<i>l</i> -Ethyl phenyl	-25.86
$\text{C}_9\text{H}_{12}\text{O}$	<i>d</i> -Methyl benzyl	26.55
$\text{C}_{10}\text{H}_{14}\text{O}$	<i>l</i> -Methyl β-phenylethyl	-14.74
$\text{C}_{12}\text{H}_{12}\text{O}$	<i>l</i> -Methyl α-naphthyl	-14.53
$\text{C}_{17}\text{H}_{22}\text{O}$	<i>d</i> - <i>n</i> -Hexyl α-naphthyl	-1.51

Ethers of *d*-Benzylmethyl carbinol, $\text{C}_7\text{H}_7(\text{CH}_3)\text{CHOR}$ (1617)

Formula	R	$[\alpha]_D^{20}$
$\text{C}_{14}\text{H}_{22}\text{O}$	<i>n</i> -Amyl	22.75
$\text{C}_{16}\text{H}_{24}\text{O}$	<i>n</i> -Hexyl	22.83
$\text{C}_{18}\text{H}_{30}\text{O}$	<i>n</i> -Nonyl	20.78

Methyl alkyl carbinyl esters (1623, 1625)

d-β-Butyl derivatives

Formula	Ester	$[\alpha]_D^{20}$
$\text{C}_5\text{H}_{10}\text{O}_2$	Formate	18.74
$\text{C}_6\text{H}_{12}\text{O}_2$	Acetate	25.43
$\text{C}_7\text{H}_{14}\text{O}_2$	Propionate	23.85
$\text{C}_8\text{H}_{16}\text{O}_2$	<i>n</i> -Butyrate	21.97
$\text{C}_9\text{H}_{18}\text{O}_2$	<i>n</i> -Valerate	20.72
$\text{C}_{10}\text{H}_{20}\text{O}_2$	<i>n</i> -Hexoate	18.66
$\text{C}_{11}\text{H}_{22}\text{O}_2$	<i>n</i> -Heptoate	17.37

d-β-Butyl derivatives.—(Continued)

Formula	Ester	$[\alpha]_D^{20}$
C ₁₂ H ₂₄ O ₂	<i>n</i> -Octoate	16.14
C ₁₃ H ₂₆ O ₂	<i>n</i> -Nonoate	15.03
C ₁₅ H ₃₀ O ₂	<i>n</i> -Undecoate	13.42
C ₁₆ H ₃₂ O ₂	<i>n</i> -Dodecoate	12.69
C ₁₈ H ₃₆ O ₂	<i>n</i> -Myristate	11.34
C ₂₀ H ₄₀ O ₂	Palmitate	10.25
C ₂₂ H ₄₄ O ₂	Stearate	9.39

d-β-Amyl derivatives

C ₇ H ₁₄ O ₂	Acetate	17.16
C ₈ H ₁₆ O ₂	Propionate	16.43
C ₉ H ₁₈ O ₂	<i>n</i> -Butyrate	15.77
C ₁₀ H ₂₀ O ₂	<i>n</i> -Valerate	16.01
C ₁₇ H ₃₄ O ₂	<i>n</i> -Dodecoate	10.44

d-β-Hexyl derivatives

C ₈ H ₁₆ O ₂	Acetate	10.13
C ₉ H ₁₈ O ₂	Propionate	9.76
C ₁₀ H ₂₀ O ₂	<i>n</i> -Butyrate	10.83
C ₁₁ H ₂₂ O ₂	<i>n</i> -Valerate	11.16
C ₁₂ H ₂₄ O ₂	<i>n</i> -Hexoate	10.84
C ₁₃ H ₂₆ O ₂	<i>n</i> -Heptoate	10.36
C ₁₅ H ₃₀ O ₂	<i>n</i> -Nonoate	9.38
C ₁₇ H ₃₄ O ₂	<i>n</i> -Undecoate	8.35
C ₁₈ H ₃₆ O ₂	<i>n</i> -Dodecoate	7.99
C ₂₀ H ₄₀ O ₂	<i>n</i> -Myristate	7.40
C ₂₂ H ₄₄ O ₂	Palmitate	6.87
C ₂₄ H ₄₈ O ₂	Stearate	6.16

d-β-Heptyl derivatives

C ₉ H ₁₈ O ₂	Acetate	8.23
C ₁₀ H ₂₀ O ₂	Propionate	8.37
C ₁₁ H ₂₂ O ₂	<i>n</i> -Butyrate	10.16
C ₁₂ H ₂₄ O ₂	<i>n</i> -Valerate	10.26
C ₁₃ H ₂₆ O ₂	<i>n</i> -Hexoate	9.97
C ₁₄ H ₂₈ O ₂	<i>n</i> -Heptoate	9.53
C ₁₅ H ₃₀ O ₂	<i>n</i> -Octoate	9.07
C ₁₆ H ₃₂ O ₂	<i>n</i> -Nonoate	8.70
C ₁₈ H ₃₆ O ₂	<i>n</i> -Undecoate	7.96
C ₁₉ H ₃₈ O ₂	<i>n</i> -Dodecoate	7.58
C ₂₁ H ₄₂ O ₂	<i>n</i> -Myristate	6.91
C ₂₃ H ₄₆ O ₂	Palmitate	6.53
C ₂₅ H ₅₀ O ₂	Stearate	6.06

d-β-Octyl derivatives

C ₉ H ₁₈ O ₂	Formate	-4.16
C ₁₀ H ₂₀ O ₂	Acetate	6.84
C ₁₁ H ₂₂ O ₂	Propionate	6.98
C ₁₂ H ₂₄ O ₂	<i>n</i> -Butyrate	8.95
C ₁₃ H ₂₆ O ₂	<i>n</i> -Valerate	9.16
C ₁₄ H ₂₈ O ₂	<i>n</i> -Hexoate	8.96
C ₁₅ H ₃₀ O ₂	<i>n</i> -Heptoate	8.59
C ₁₆ H ₃₂ O ₂	<i>n</i> -Octoate	8.25
C ₁₇ H ₃₄ O ₂	<i>n</i> -Nonoate	7.96
C ₁₉ H ₃₈ O ₂	<i>n</i> -Undecoate	7.35
C ₂₀ H ₄₀ O ₂	<i>n</i> -Dodecoate	7.00
C ₂₂ H ₄₄ O ₂	<i>n</i> -Myristate	6.59
C ₂₄ H ₄₈ O ₂	Palmitate	6.14
C ₂₆ H ₅₂ O ₂	Stearate	5.71

d-β-Nonyl derivatives

C ₁₁ H ₂₂ O ₂	Acetate	6.21
C ₂₁ H ₄₂ O ₂	<i>n</i> -Dodecoate	6.71

d-β-Decyl derivatives

C ₁₂ H ₂₄ O ₂	Acetate	5.64
C ₂₂ H ₄₄ O ₂	<i>n</i> -Dodecoate	6.41

d-β-Undecyl derivatives

Formula	Ester	$[\alpha]_D^{20}$
C ₁₈ H ₂₆ O ₂	Acetate	5.27
C ₁₄ H ₂₈ O ₂	Propionate	5.15
C ₁₆ H ₃₀ O ₂	<i>n</i> -Butyrate	7.31
C ₁₆ H ₃₂ O ₂	<i>n</i> -Valerate	7.46
C ₁₇ H ₃₄ O ₂	<i>n</i> -Hexoate	7.37
C ₁₈ H ₃₆ O ₂	<i>n</i> -Heptoate	7.17
C ₂₀ H ₄₀ O ₂	<i>n</i> -Nonoate	6.81
C ₂₃ H ₄₄ O ₂	<i>n</i> -Undecoate	6.30
C ₂₃ H ₄₆ O ₂	<i>n</i> -Dodecoate	6.19
C ₂₅ H ₅₀ O ₂	<i>n</i> -Myristate	5.72

d-β-Dodecyl derivatives

C ₂₄ H ₄₈ O ₂	<i>n</i> -Dodecoate	5.99
--	---------------------	------

d-β-Tridecyl derivatives

C ₁₅ H ₃₀ O ₂	Acetate	4.63
C ₂₅ H ₅₀ O ₂	<i>n</i> -Dodecoate	5.87

d-γ-Nonyl esters (1051, 1625)

C ₁₀ H ₂₀ O ₂	Formate	-11.28
C ₁₁ H ₂₂ O ₂	Acetate	-5.21
C ₁₂ H ₂₄ O ₂	Propionate	-5.87
C ₁₃ H ₂₆ O ₂	<i>n</i> -Butyrate	-3.38
C ₁₄ H ₂₈ O ₂	Valerate	-3.12
C ₁₅ H ₃₀ O ₂	<i>n</i> -Hexoate	-2.66
C ₁₆ H ₃₂ O ₂	<i>n</i> -Heptoate	-2.36
C ₁₇ H ₃₄ O ₂	<i>n</i> -Octoate	-2.10
C ₁₈ H ₃₆ O ₂	<i>n</i> -Nonoate	-1.94
C ₁₉ H ₃₈ O ₂	<i>n</i> -Decoate	-1.90
C ₂₀ H ₄₀ O ₂	<i>n</i> -Undecoate	-1.83
C ₂₁ H ₄₂ O ₂	<i>n</i> -Dodecoate	-1.63
C ₂₃ H ₄₆ O ₂	<i>n</i> -Myristate	-1.55
C ₂₅ H ₅₀ O ₂	Palmitate	-1.49
C ₂₇ H ₅₄ O ₂	Stearate	-1.49

Acetic acid esters, CH₃COOR (1051)

Formula	R	$[\alpha]_D^{20}$
C ₈ H ₁₆ O ₂	<i>d</i> -γ-Hexyl	0.55
C ₉ H ₁₈ O ₂	<i>d</i> -γ-Heptyl	-4.68
C ₁₀ H ₂₀ O ₂	<i>d</i> -γ-Octyl	-4.30
C ₁₂ H ₂₄ O ₂	<i>l</i> -γ-Decyl	4.48
C ₁₃ H ₂₆ O ₂	<i>l</i> -γ-Undecyl	4.40
C ₁₄ H ₂₈ O ₂	<i>l</i> -γ-Dodecyl	3.68
C ₁₆ H ₃₀ O ₂	<i>l</i> -γ-Tridecyl	3.83
C ₁₆ H ₃₂ O ₂	<i>l</i> -γ-Tetradecyl	3.69
C ₁₇ H ₃₄ O ₂	<i>l</i> -γ-Pentadecyl	3.68
C ₁₈ H ₃₆ O ₂	<i>l</i> -γ-Hexadecyl	3.19
C ₂₀ H ₄₀ O ₂	<i>l</i> -γ-Octadecyl	2.98

Esters of methyl benzyl carbinol (1052.5)

Formula	Ester	$[\alpha]_D^{20}$
C ₁₁ H ₁₄ O ₂	Acetate	6.41
C ₁₂ H ₁₆ O ₂	Propionate	4.81
C ₁₃ H ₁₈ O ₂	<i>n</i> -Butyrate	8.48
C ₁₄ H ₂₀ O ₂	<i>n</i> -Valerate	10.76
C ₁₅ H ₂₂ O ₂	<i>n</i> -Hexoate	10.46
C ₁₆ H ₂₄ O ₂	<i>n</i> -Heptoate	10.69
C ₁₇ H ₂₆ O ₂	<i>n</i> -Octoate	10.67
C ₁₈ H ₂₈ O ₂	<i>n</i> -Nonoate	10.50
C ₁₉ H ₃₀ O ₂	<i>n</i> -Decoate	10.13
C ₂₀ H ₃₂ O ₂	<i>n</i> -Undecoate	9.92
C ₂₁ H ₃₄ O ₂	<i>n</i> -Dodecoate	9.66
C ₂₄ H ₃₈ O ₂	Myristate	9.22
C ₂₆ H ₄₂ O ₂	Palmitate	8.44
C ₂₈ H ₄₆ O ₂	Stearate	7.92

ALCOHOLS.—(Continued)

Esters of *d*- α -naphthyl-*n*-hexyl carbinol (1053)

Formula	Ester	$[\alpha]_D^{20}$
C ₁₉ H ₂₄ O ₂	Acetate	23.85
C ₂₀ H ₂₆ O ₂	Propionate	28.59
C ₂₁ H ₂₈ O ₂	<i>n</i> -Butyrate	27.02
C ₂₂ H ₃₀ O ₂	<i>n</i> -Valerate	22.23
C ₂₃ H ₃₂ O ₂	<i>n</i> -Hexoate	21.12
C ₂₄ H ₃₄ O ₂	<i>n</i> -Heptoate	19.63
C ₂₅ H ₃₆ O ₂	<i>n</i> -Octoate	21.13
C ₂₆ H ₃₈ O ₂	<i>n</i> -Nonoate	19.06
C ₂₇ H ₄₀ O ₂	<i>n</i> -Decoate	17.13
C ₂₈ H ₄₂ O ₂	<i>n</i> -Undecoate	16.44

Esters of benzoic acid and naphthoic acids with secondary alcohols

Benzoic acid esters (1056)

C ₁₁ H ₁₄ O ₂	<i>d</i> - β -Butyl	39.23
C ₁₃ H ₁₈ O ₂	<i>d</i> - β -Hexyl	35.38
C ₁₅ H ₂₂ O ₂	<i>d</i> - β -Octyl	33.27
C ₁₆ H ₁₆ O ₂	<i>d</i> -Benzyl methyl carbinyl	65.07
C ₁₆ H ₂₄ O ₂	<i>d</i> - γ -Nonyl	6.84
C ₁₈ H ₂₈ O ₂	<i>d</i> - β -Undecyl	27.55

 α -Naphthoic acid esters (1056)

Formula	Ester	$[\alpha]_D^{20}$
C ₁₅ H ₁₆ O ₂	<i>d</i> - β -Butyl	28.40
C ₁₇ H ₂₀ O ₂	<i>d</i> - β -Hexyl	5.87
C ₁₈ H ₂₂ O ₂	<i>d</i> - β -Heptyl	3.99
C ₁₉ H ₂₄ O ₂	<i>d</i> - β -Octyl	1.67
C ₂₀ H ₁₈ O ₂	<i>d</i> -Benzyl methyl carbinyl	29.10
C ₂₀ H ₂₆ O ₂	<i>d</i> - γ -Nonyl	-22.23
C ₂₁ H ₂₈ O ₂	<i>d</i> - β -Decyl	1.41
C ₂₂ H ₃₀ O ₂	<i>d</i> - β -Undecyl	1.63

 β -Naphthoic acid esters (1056)

C ₁₅ H ₁₆ O ₂	<i>d</i> - β -Butyl	50.04
C ₁₇ H ₂₀ O ₂	<i>d</i> - β -Hexyl	57.11
C ₁₉ H ₂₄ O ₂	<i>d</i> - β -Octyl	56.25
C ₂₀ H ₁₈ O ₂	<i>d</i> -Benzyl methyl carbinyl	122.83
C ₂₀ H ₂₆ O ₂	<i>d</i> - γ -Nonyl	19.14
C ₂₂ H ₃₀ O ₂	<i>d</i> - β -Undecyl	50.03

The following index contains the names of the simpler chemical compounds and the "common" names of the more complicated compounds, in so far as such common names exist. Complicated compounds which are named only in terms of their chemical structure should be located from the system of arrangement as explained in the Introduction. In general, only the parent compound is indexed, since derivatives are almost always to be found in the same section.

INDEX

- Aconine, 477
Aconitine, 478
Acrine, 477
Adrenaline, 365
Agaric acid, 405
Alanine derivs., 374
Allobrucine, 474
Alloisoleucine, 404
Allomenthol esters, 421
Allonic acid, 397
Altronic acid, 397
Aminobenzyl- β -naphthol, 364
Aminobutyric acid, 375
Aminocamphor derivs., 450
Amygdalin, 399
Amyl alcohol derivs., 402
Amylamine, 402
Amyl bromide, 401
Amyl iodide, 401
Amyrilene, 462
Amyrin, 464
Anhydroglucose, 389
Anhydrographolide, 466
Anthesterol, 464
Apogelsemine, 476
Apoquinine, 471
Arabinose, 386
Arbutin, 392
Arginine, 376
Artemisone, 465
Ascaridolic acid, 417
Ascaridolglycol, 462
Asparagine, 377
Aspartic acid, 377
Aspidospermatine, 476
Aspidospermine, 476
Atisine, 476
Aucubin, 392
- Bebeerine, 475
Bebirine, 476
Benzoin, 362
Betonine, 408
Bikhaconine, 477
Bikhaconitine, 478
Bombicsterol, 464
Borneol, 454
Borneol esters, 454
Borneolcarboxylic acid, 456
Bornylamine, 456
Bornylene, 433
Brucine, 473
Bruinolone, 473
Bufotalin, 475
Bulbocapnine, 475
Butylamine, 363
- Cadinene, 461
Calamene, 461
Calameon, 462
Camphene, 411, 433
Camphenilone, 415
- Camphenonic acid, 445
Campherol, 434
Campholenic acid, 415
Campholic acid, 443
Campholytic acid, 415
Camphononic acid, 433
Camphor, 435
Alkyl derivs., 435
Alkyldene derivs., 435
Halogen derivs., 437
Hydrazones, 437
Imines, 437
Nitro derivs., 438
Oximes, 437
Sulfur derivs., 439
Camphoramic acid, 447
Camphoramide, 447
Camphoric acid, 446
Camphorcarboxylic acid, 445
Camphorimide, 447
Camphoronic acid, 405
Camphorylcarbamide, 451
Camphorylcarbimide, 451
Camphorglycol, 434
Camphoryloxime, 449
Camphorylsemicarbazide, 452
Camphylamine, 418
Carpamic acid, 466
Carpiline, 475
Carvomenthol, 420
Carvomenthol esters, 421
Carvone, 413
Carvoxime, 413
Carvylamine, 429
Casimeroedine, 475
Casimiroic acid, 467
Casimirolide, 467
Catechin, 462
Caulophyllosaponin, 465
Cedrene, 461
Cedrenol, 462
Cellobial, 400
Cellobiose derivs., 400
Cellose derivs., 400
Cerebronic acid, 368
Chaulmoogric acid, 416
Chitic acid, 397
Chitin, 477
Chitonic acid, 397
Chlorogenic acid, 467
Choleinic acid, 467
Cholestane, 462
Cholesterol, 463
Chondrodine, 475
Chondrosamic acid, 398
Cincholoiponic acid, 466
Cinchonidine, 469
Cinchonine, 469
Cineolic acid, 417
Citronellol, 402
- Cluytiasterol, 463
Cocaine, 432
Cocaoase, 398
Codeine, 468
Codeinone, 468
Concunone, 477
Conhydrine, 407
Coniceine, 475
Coniine, 407
Convolvulinic acid, 367
Coposterol, 464
Corybulbine, 476
Corycavamine, 476
Corydaline, 476
Corydine, 476
Corypalmine, 476
Cubebin, 362
Cupreine, 475
Cusonine, 477
Cyanocamphor, 438
Cyclamose, 401
Cyclose, 387
Cypressene, 461
Cysteine, 374
Cystine, 374
Cytidine, 475
Cytisine, 475
- Daucine, 475
Delphinine chloride, 465
Desoxycholic acid, 467
Dextrin, 401
Diamylose, 401
Decahydroquinoline, 429
Diethoxysuccinic acid, 385
Dihydronaphthoic acid, 406
Dimethoxysuccinic acid, 384
Dimethylglucose, 389
Dipheneserine, 477
Diphenic acid derivs., 459
Dithiosuccinic acid, 385
Dulcitol derivs., 388
- Egonine, 431
Egoninic acid, 431
Echitamine, 476
Elateric acid, 467
Elaterin, 464
Elaterone, 465
Emetamine, 477
Ephedrine, 380
Epicamphor, 435
Amino derivs., 453
Epicatechin, 462
Ergosterol, 463
Ergotinine, 478
Eriodictyonone, 465
Erythritol, 380
Erythrose, 380
Eseroline, 475
Ethoxysuccinic acid, 373
Ethylglucosides, 391
Eudesmene, 461
- Eudesmol, 462
Euphorbone, 465
Euxanthic acid, 397
- Faradiol, 464
Fenchene, 411
Fenchocamphoric acid, 446
Fencholenic acid, 415
Fenchone, 435
Fenchyl alcohol, 453
Fenchylamine, 456
Fructose, 389
Fucose, 389
Fucitol, 389
Fungisterin, 464
Furane derivs., 406
- Galactite, 395
Galactobioses, 401
Galactonic acid, 397
Galactose, 395
Nitrogen derivs., 396
Galactosides, 395
Gegosaponin, 465
Gelsemine, 476
Gentiaacaulin, 478
Gentiobiose derivs., 400
Gentiopierin, 401
Globulol, 462
Glucodecose, 399
Glucodesose, 386
Glucogallie acid, 466
Glucoheptitol, 398
Glucoheptose, 398
Gluconic acid, 397
Glucanose, 399
Glucocotose, 399
Glucosamic acid, 398
Glucosamine, 393
Glucosanil, 394
Glucosanilide, 394
Glucosazone, 393
Glucose
Acyl derivs., 390
Alkyl derivs., 389
Nitrogen derivs., 393
Glucosides
Aromatic, 392
Heterocyclic, 393
Hydroaromatic, 392
Glucosoxime, 393
Glucuronic acid, 397
Glutamic acid, 377
Glyceric acid, 368
Glycine, 374
Glycocholic acid, 467
Guajene, 461
Guajol, 462
Gulonic acid, 397
Gurjunene, 461
- Histidine, 375
Homofenchene, 434

- Homonataloin, 386, 463
 Homopilopie acid, 404
 Homonopinol, 412
 Homotaraxasterol, 464
 Hydnocarpic acid, 466
 Hydnocarpus acid, 466
 Hydrastine, 432
 Hydroglucal, 406
 Hydroxybutyric acid, 366
 Hyoscyamine, 432

 Iditol, 388
 Idonic acid, 397
 Iminocamphor, 449
 Indaconine, 477
 Indaconitine, 478
 Indobenzacconine, 478
 Ipuranol, 463
 Ipurolic acid, 386
 Isoamarine, 476
 Isoapogelsemine, 476
 Isoartemisine, 465
 Isobeberine, 475
 Isobebirine, 476
 Isocamphane, 411, 433
 Isocamphoric acid, 446
 Isocinchonidine, 469
 Isocodeine, 468
 Isoconiine, 407
 Isocorydine, 476
 Isocubebic ether, 466
 Isoemetine, 477
 Isoeuxanthic acid, 397
 Isofenchyl alcohol, 453
 Isoglucal, 389
 Isoleucine, 404
 Isomorphine, 467
 Isonitrosocamphor, 441
 Isociviline, 462
 Isopulegol, 412
 Isopurganol, 463
 Isoquinine, 472
 Isorhodeose, 389
 Isosaccharin, 398
 Isosantonin acid, 466
 Isoserine, 374
 Isosparteine, 419
 Isostrychnine, 473
 Isovaleric acid, 403
 Isozingiberene, 411

 Jalapinolic acid, 367

 Lactal, 399
 Lactic acid, 366
 Laserpitin, 464
 Lauroleone, 409
 Lauronolic acid, 432
 Ledum camphor, 465
 Lepranthin, 477
 Leucic acid, 367
 Leucine, 375
n-Leucine, 375
 Leucodigallic acid, 466
 Levulomannan, 400
 Levulose, 389
 Limonene, 410
 Linalool, 402
 Lippianol, 464

 Longiforic acid, 466
 Lupeose, 401
 Lupinidine, 475
 Lycoaconitine, 478
 Lyxohexosamic acid, 398

 Malamic acid, 371
 Malic acid, 369
 Maltose derivs., 399
 Mandelic acid, 366
 Mannitol derivs., 388
 Mannogalactan, 400
 Mannoheptose, 398
 Mannonic acid, 397
 Mannose derivs., 395
 Marrubic acid, 467
 Marrubiin, 467
 Matairesinol, 462
 Matairesinolic acid, 466
 Melibiose, 401
 Menthadiene, 409
 Menthanol, 410
 Menthene, 410
 Mentheneol, 412
 Menthonone, 414
 Menththol, 420
 Esters, 421
 Ethers, 421
 Menthone, 414
 Menthylamine, 429
 Menthylbenzamidines, 431
 Menthylcarbamates, 430
 Menthylcarbamides, 430
 Menthylcarbimide, 430
 Metasaccharin, 398
 Methoxysuccinic acid, 372
 Methylglucosides, 390
 Methylglucose, 389
o-Methylpsychotrine, 477
 Methyltetrose, 386
 Micromeritol, 464
 Micromerol, 465
 Morphine, 468
 Myocetonine, 478
 Myrtenol, 412

 Narcissine, 475
 Narcotine, 409, 476
 Nataloin, 386
 Neocholestene, 462
 Nicotine, 408
 Nitrotartaric acids, 384
 Nopinic acid, 417
 Nopinol, 420
 Nopinone, 415

 Olivine hydrate, 463
 Oxonitine, 477
 Oxycanthine, 475

 Pentoses, 386
 Perseulose, 398
 Phellandrene, 410
 Phenoserine, 476
 Phenogeneserine, 476
 Phenylalanine, 376
 Phenylethylamine, 363
 Phenylglycine, 376
 Phenylmercapturic acid, 374

 Phenylsuccinic acid, 368
 Phosphorus compounds, 461
 Photosantonin acid, 467
 Phytosterol, 463
 Physostigmine, 475
 Pierotinic acid, 465
 Picrocin, 475
 Picrotoxinin, 475
 Picrotoxininic acid, 465
 Picrotoxinonic acid, 465
 Pilopie acid, 404
 Pilopinic acid, 419
 Pilosinine, 419
 Pilosine, 420
 Pinane, 411
 Pinene, 411
 Pinocarveol, 420
 Pinolene, 411
 Pinonic acid, 417
 Piperidine derivs., 407
 Polypeptides, 377
 Proline, 408
 Propylenediamine, 365
 Pseudocedrol, 462
 Pukateine, 475
 Pulegone, 415
 Pulegoneacetic acid, 418
 Pyroaconitine, 477
 Pyroindaconitine, 478

 Quercitrin, 389
 Quercitol, 405
 Quinamine, 471
 Quinicine, 473
 Quinine, 473

 Ratanhine, 475
 Rhamnoheptose, 399
 Rhamnohexose, 398
 Rhamnose, 388
 Rhapontin, 401
 Rhodeose, 389
 Ribose, 387
 Ricinelaic acid, 368
 Ricinoleic acid, 367
 Ricinostearolic acid, 367

 Saccharic acid, 398
 Saccharine, 398
 Saccharone, 398
 Saccharose derivs., 399
 Salicin, 392
 Sambunigrin, 392
 Santalene, 461
 Santalenic acid, 466
 Santalol, 462, 465
 Santolic acid, 466
 Santonin, 466
 Santononic acid, 466
 Sapogenine, 393
 Scopolamine, 475
 Scutellarin, 463
 Selenium compounds, 461
 Seline, 411
 Selineol, 421
 Serine, 374

ABBREVIATIONS

DNT	Dinitrotoluene.	N/G	Nitroglycerin.
MNN	Mononitronaphthalene.	TNN	Trinitronaphthalene.
N/B	Aromatic nitro body.	TNT	Trinitrotoluene.

INTRODUCTION

Pure compounds are not used to any great extent in civil applications of explosives. Ordinary commercial blasting and propulsive explosives have usually an empirical composition, with fairly wide tolerances for the proportions of the several ingredients, and very often one or more of these constituents is a substance of indefinite chemical composition. Furthermore the treatment during the process of manufacture, for example the fineness of the ingredients used, the time of mixing, and the physical condition of the product, have considerable influence on the properties of the finished explosive.

Data are tabulated relating to the principal explosive properties of the chief pure explosive substances, but for compounded explosives only typical or limiting compositions and properties are given.

TYPES OF TESTS

The principal tests used for explosives are described briefly below:

1. Calorimetric tests to determine the *heat of explosion* and the *volume and composition of the explosion gases*. For descriptions of the method of carrying out the experiments, see Vol. II, p. 440-444 of (25) and (39, 40).

The explosion temperature has not been determined directly, but can in principle be calculated from the pressure developed when the substance is exploded in a closed vessel. Various types of apparatus for determining the maximum pressures developed, or for recording variations in pressure, are described in (25). Explosion temperatures may also be calculated from the heat of explosion if the nature, amounts and specific heats of the explosion products are known.

2. *Trauzl Lead-block Test*.—This test is used for blasting explosives¹ as a ready means of estimating the relative powers of explosives of the same class fired under slight confinement. At the Berlin meeting (1903) of the International Congress of Applied Chemistry, standard conditions for carrying out this test were prescribed (2). Kast (19) gives a table of corrections for temperature.

3. The *fall-hammer test* is used to measure approximately the sensitiveness to shock of an explosive. The classification of explosives for transport on the German railways is based, in part, on the results of this test. The method of carrying it out is described in (14, 15), and by Marshall (25), Vol. II, p. 423.

¹ In the U. S. A. the ballistic mortar test described under 9, below, is largely used by manufacturers of explosives.

4. The *deflagration test* for the determination of the explosion temperature serves to measure the sensitiveness of the explosive to active decomposition by the action of heat.

5. A large number of so-called "stability tests" have been developed in order to obtain some idea of the chemical stability of explosives during storage. Among these may be mentioned the *Abel, Bergmann-Junk, Will and Sy* tests.

6. The *bulk density* of an explosive is an important factor in its behavior and this property can be varied within fairly wide limits by modifications in the method of manufacture.

7. The *detonation velocity* of an explosive is one of the most important factors in its brisance, and, therefore, in its practical applications. The methods used for measuring it are described in the textbooks; see, for example (25) Vol. II, p. 476. A discussion by Kast of the sources of error when the Siemens spark chronograph is used is largely applicable to any chronographic method (17).

The value found depends on the diameter of the train of explosive used (up to a certain limiting value, varying with the nature of the explosive); on the degree of confinement to which it is subjected; and on the method of initiation.

The detonation velocity increases in general with the density.

In the case of certain explosives this increase continues up to a certain critical density, after which it falls rapidly. In the case of some of the less porous nitro bodies it has not yet been proved that the detonation value does decrease in this way after a certain limit, although there are indications that this is probably so.

Nitroglycerin gelatinous explosives have two distinct detonation velocities. That which is attained depends on various factors, but especially on the nature of the initiation and on the degree of confinement.

The following tests are of special importance in connection with coal mine explosives:

8. *Tests in an experimental gallery* to determine the maximum charge which can be fired without igniting an air-gas mixture containing specified proportions of an inflammable gas or coal dust or both. Natural firedamp, artificially prepared methane and illuminating gas have been used as the inflammable gas. A brief historical sketch of the various gallery tests is given in (13). A table appended to that pamphlet gives data regarding the principal testing galleries. On the basis of these tests limiting charges of explosive are fixed for use in mines.

9. *Ballistic pendulum tests* are used in Great Britain and the United States to furnish a comparative estimate of the strength of the explosive, the results being published as a guide to the purchaser in the selection of an explosive suitable for his requirements.

In the United States the detonation velocity of permissible coal mine explosives is also published, but this is not done for the British "permitted" explosives.

10. For propulsive explosives, tests are carried out in appropriate weapons to measure the *pressure developed in the barrel of the gun*, usually by means of crusher gages, and to determine the *velocity of the projectile*, and, for shotgun cartridges, the *shot "pattern."*

Velocities are measured over a certain distance from the muzzle of the gun by the use of a suitable target in conjunction with a chronograph. The result may be given as the average velocity over this distance or as the "remaining velocity" at half the distance, or a calculated value of the "muzzle velocity" may be reported. V_x is used to denote the remaining velocity at x meters (or other unit) found by means of a target placed at $2x$ meters from the gun.

11. For initiating explosives, in addition to the heat of explosion, the explosion point and the result of the fall-hammer test, there may also be given the result of a test similar to the Trauzl lead-block test but using a smaller lead block; of the "lead plate" test (which, however, does not furnish definite numerical results); of tests on the *limiting charge* required to initiate the detonation of a definite quantity of some explosive (usually a nitro body); of the *Esop* and *Wöhler* tests in which an explosive is phlegmatized in some manner until it is just no longer "initiated" by the initiator under test; or of the "sand" test developed by the U. S. A. Bureau of Mines, in which a detonating charge is exploded in the center of graded sand, and the degree of pulverization of the sand produced by the explosion is measured.

SIMPLE EXPLOSIVES (PURE SUBSTANCES)

Heat of Explosion

Explosion in calorimetric bomb. The heat of explosion may also be calculated from thermochemical data (*q.v.*, Vol. V, p. 162, 169), the results agreeing well with the experimental. Alternative methods of decomposition may be possible and the heat of explosion may thus vary, for example, with the loading density or the nature of the initiation.

Abbreviations

(g), Gaseous; (l) liquid; d, density; L.d., loading density.

Conversion Factors

1 g-cal₁₅/g = 4.185 joule/g = 1.800 BTU₆₀/lb.

COMPOUNDED EXPLOSIVES

BLASTING EXPLOSIVES

The following classification of blasting explosives will be found useful, though the classes are by no means mutually exclusive.

A. Non-detonating explosives. B. Detonating or high explosives.

A. Non-detonating explosives.

Black powder is the principal type of this class. The German "Sprengsalpeter" is similar to black powder, with sodium nitrate in place of potassium nitrate.

B. Detonating or high explosives.

I. Nitroglycerin explosives.

(a) Gelatinous explosives.

(b) Dynamites.

(1) With inactive additions.

(2) With active additions.

II. Ammonium nitrate explosives containing as sensitizer:

(a) Nitroglycerin.

(b) Aromatic nitro body.

(c) Non-explosive substance.

III. Perchlorate explosives.

IV. Chlorate explosives.

Nitroglycerin explosives are liable to freeze and their use in the frozen condition gives rise to danger. This danger may be removed by partially or wholly replacing the nitroglycerin by

nitrated chlorohydrin, ethyleneglycol dinitrate, dinitroglycerin, nitrated polyglycerin or aromatic nitro compounds such as nitrobenzene, thus forming low freezing (L. F.) explosives.

Some dynamites have a certain proportion of nitrocotton incorporated with the nitroglycerin to diminish the risk of exudation of the nitroglycerin during transport or storage. These may be called semi-gelatins. They resemble the dynamites rather than the gelatins in properties.

A special class of blasting explosives is constituted by those officially authorized for use in coal mines, which are often referred to as "safety explosives." They are known as "permitted explosives" in Great Britain, "permissible explosives" in the United States, "Wettersprengstoffe" in Germany, "Explosifs S. G. P., in Belgium, and "explosifs de sûreté" in France. They usually contain alkaline salts, or sometimes hydrated salts, to reduce the temperature of detonation, and the length and duration of flame.

COMPOSITIONS OF VARIOUS TYPICAL COMPOUNDED EXPLOSIVES
Blasting Explosives (See p. 495 for properties)

Key number	Explosive
1	Black Powder: KNO_3 , 62-75.7%; S, 10-19.4%; charcoal, 12-5%. The properties can be modified to a considerable extent by varying the nature of the charcoal used, the time of mixing and the size of grain of the product.
2	Bobbinite: KNO_3 , 65.31%; S, 2.63%; charcoal, 19.52%; paraffin, 3.35%; starch, 8.73%; H_2O , 0.46%.
3	Blasting Gelatin: * Nitroglycerin, 90-95%; nitrocotton, 5-10%.
4	Nobel Gelatinous Explosives: * Nitroglycerin, 25-85%; nitrocotton, 0.5-7%; liquid nitro body, 0.4-9%; woodmeal, 0.9-10%; K or Na nitrate, 6-45%; chalk, 0-0.3%.
5	U. S. A. Gelatin Dynamites: * L. F. Nitroglycerin, 20-80%; nitrocotton, 0.3-4.5%; combustible substances, 6-16%; NaNO_3 , 1.5-6.2%; CaCO_3 , 1%.
6	French "Gommes": * Nitroglycerin, 49-86%; nitrocotton, 2-6%; woodmeal, 0.25-10%; KNO_3 , 4-36%.
7	Kieselguhr Dynamite: † Nitroglycerin, 72-75%; kieselguhr, 25-28%.
8	Nobel Glasgow Dynamites (Semigelatinous): Nitroglycerin, 24.4-57%; nitrocotton, 0.6-3.0%; NaNO_3 , 21-55.75%; woodmeal, 16.5-19.25%.
9	U. S. A. Straight Dynamites: L. F. Nitroglycerin, 15-75%; NaNO_3 , 5-66%; combustible substances, 5-20%; CaCO_3 or MgCO_3 , 1%.
10	Pittsburgh Standard 40% Straight Dynamite: Nitroglycerin, 40%; NaNO_3 , 44%; wood pulp, 15%; CaCO_3 , 1%.
11	Carbonites: Nitroglycerin, 17-30%; NaNO_3 , 24-30%; combustible (usually flour), 37-44%. Antacids are sometimes added, and the explosive may be made of the low freezing type by the use of tetranitrodiglycerin.
12	Carbonite Type of Explosive Tested by U. S. A. Bureau of Mines (Explosive D): Nitroglycerin, 24.92%; KNO_3 , 25.37%; $\text{Ba}(\text{NO}_3)_2$, 4.42%; woodmeal, 34.60%; starch, 6.64%; H_2O , 4.05%.
13	U. S. A. Ammonia Dynamites: NH_4NO_3 , 7-50%; NaNO_3 , 14-60%; nitroglycerin, 12-25%; combustible substances, 8-20%; CaCO_3 or ZnO , 1%.

* Camphor, soda or chalk have also been added in small proportions, and sometimes a little nitro body.

† Sometimes soda, talc or heavy spar is added in small proportions.

COMPOSITIONS OF VARIOUS TYPICAL COMPOUNDED EXPLOSIVES.—
(Continued)

Key number	Explosive
14A	Grisoudynamite Couche: NH_4NO_3 , 87.5% (or 82.5% + KNO_3 , 5%); nitroglycerin, 12%; nitrocotton, 0.5%.
14B	Grisoudynamite Roche: NH_4NO_3 , 70% (or 65% + KNO_3 , 5%); nitroglycerin, 29%; nitrocotton, 1%.
15	Donarit: NH_4NO_3 , 80%; nitroglycerin (gelatinized or not), 4%; TNT, 12%; rye flour, 4%.
16A	Grisounaphthalite Couche: NH_4NO_3 , 95% (or 90% + KNO_3 , 5%); trinitronaphthalene, 5%.
16B	Grisounaphthalite Roche: NH_4NO_3 , 91.5% (or 86.5% + KNO_3 , 5%); dinitronaphthalene, 12%.
17	Withnell Type of Explosive Tested by U. S. A. Bureau of Mines (Explosive J): NH_4NO_3 , 90.5%; TNT, 4.82%; flour, 4.23%; H_2O , 0.45%.
18	Yonckites (Belgium): NH_4ClO_4 , 6-25%; NH_4NO_3 , 17.5-65%; NaNO_3 , 27-30%; $\text{Ba}(\text{NO}_3)_2$, 6-10%; TNT, 10-22.5% or TNN, 3.75%.
19	Sabulex: NH_4NO_3 , 59-56%; KClO_4 , 8-10%; TNT, 9-7%; NH_4Cl , 26-24%.
20	Perchloratites (Germany): The perchloratites authorized for use in Prussia include explosives with contents of KClO_4 ranging from 30-75%.
21	Cheddites: KClO_4 , 70-90%; aromatic nitro compounds, 0-20%; paraffin, 0-14%.
22	Cheddite Type Explosive Tested by U. S. A. Bureau of Mines (Explosive E): KClO_4 , 75.36%; MNN, 1.3%; DNT, 17.85%; castor oil, 5.32%; H_2O , 0.17%.
23	Silesia Type Explosive Tested by U. S. A. Bureau of Mines (Explosive F): KClO_4 , 75.27%; nitrated resin, 24.63%; H_2O , 0.10%.
24	Chloratites (Germany): The chloratites authorized for use in Prussia include explosives with contents of KClO_3 or NaClO_3 ranging from 70-91%, along with aromatic nitro derivatives and combustible substances.

Explosives For Use in Fiery Coal Mines

POWER

The power of British "permitted explosives" is measured by means of a ballistic pendulum test. A stemmed charge is fired electrically from a gun into a ballistic pendulum and the deflection is compared with that given by 4 oz. of 60% gelignite under the same conditions. The standard charge gives a swing of 3.27 in., and the actual deflections are reduced to correspond to this value.

The values will be found in the "*Explosives in Coal Mines Orders*."

The standard used in the United States is 40% straight dynamite. The unit deflective charge is that which gives the same deflection as 227 g ($\frac{1}{2}$ lb.) of the standard dynamite.

In Belgium a modified form of the Trauzl lead-block test is used for comparing the powers of S. G. P. explosives. The weight of explosive equivalent to 100 g of dynamite No. 1 is given. The values are published in the *Annales des Mines de Belgique*.

CHARGE LIMIT

For British "permitted" explosives the charge limits have in the past varied from 8 oz., to 40 oz., but are now fixed at the uniform figure of 28 oz. Results are published in the *Explosives in Coal Mines Orders*.

A general limit of $1\frac{1}{2}$ lbs. is fixed for the maximum permissible charge of the U. S. A. "permissible explosives," and no explosive is placed on the list unless this maximum charge satisfies the gallery test.

PROPERTIES OF VARIOUS TYPICAL COMPOUNDED EXPLOSIVES

Blasting explosives (See p. 494 for compositions)

Key number	Explosive	Heat of explosion, g-cal per g	Trauzl lead-block test, expansion in cm ³	Fall-hammer test, weight of hammer 2 kg; fall, cm	Detonation velocity, meters per second	Loading density, g/cm ³	Propagation of detonation by influence, cm	Diameter of cartridge, mm

* Tested by U. S. A. Bureau of Mines.

The charge limits for Belgian S. G. P. explosives vary from 400 g to 900 g. The values are published in the *Annales des Mines de Belgique*.

The charge limits fixed in the Prussian official regulations for the use of "Wettersprengstoffe" are 700 or 800 g, separate limits being fixed for fiery and non-fiery mines. In the great majority of cases the limit is 800 g in each case. See "Das Sprengstoffwesen im preussischen Bergbau."

DETONATION VELOCITY

The detonation velocities of U. S. A. permissible explosives vary from 1792 meters per second for Red H.C. L.F. to 4651 for Gelobel.

Values are not published by the authorities in Great Britain. The detonation velocities of the permitted explosives made by Nobel Industries Limited range from 1900 to 5000 meters per second.

Propulsive Explosives

Propulsive explosives may be arranged under the following classes:

1. Black powder type.
2. Nitrocellulose powders.
 - (a) Without additions.
 - (b) With additions.

3. Nitroglycerin powders containing both nitrocellulose and nitroglycerin.

(a) Without other additions.

(b) With other additions.

Examples are given showing the composition and properties of various compounded explosives.

Black Powder, see *Blasting Explosives*.

Amide Powder (Chilworth Special Powder): NH_4NO_3 , 35.38%; KNO_3 , 40–46%; charcoal, 14–22%.

Ammonpulver: NH_4NO_3 , 80–90%; charcoal, 10–20%.

Nitrocellulose Powders

American Pyrocollodion Powders: nitrocellulose 99.4% (mixture of di- and trinitrocellulose, average nitrogen content 12.60%), diphenylamine. Together with residual solvent and water 0.6%.

French B Powder: CP_2 , 20–25% to 50–55% according to the liveliness of the powder, along with CP_1 . The solvent used is ether-alcohol. Amyl alcohol or diphenylamine may be used as stabilizer. These are indicated by AM or D after the name. CP_1 is a nitrocotton with nitrogen content of about 13%. About 10% (<15%) is soluble in ether-alcohol. It gives off 205–214 cm^3 of $\text{N}_2\text{O}_4/\text{g}$ in nitrometer test. CP_2 is a nitrocotton with nitrogen content of about 12%, almost completely soluble in ether-alcohol (>96%) and giving off 190–198 cm^3 of N_2O_4 per g in nitrometer.

Walsrode Shotgun Powder: Nitrocellulose, 97%; chalk, 2%; ether, 1%.

Nitrocellulose Powders with Additions

Amberite*: Nitrocellulose (insoluble, 18.6%, soluble, 46%); mineral nitrates, 2.8%; vaseline, 6%; H_2O , 1.4%.

Clermonite: Nitrocellulose with mineral nitrates.

E. C. Powder: Contains from 14% of mineral nitrates and vaseline, camphor, resin and woodmeal or some of them in addition to nitrocellulose.

Empire Powder: Contains mineral nitrates, 9%, and vaseline in addition to nitrocellulose.

Hasloch Jagdpulver: Contains $\text{Ba}(\text{NO}_3)_2$, 17%, and vaseline in addition to nitrocellulose.

J. Powder (French): Contains $(\text{NH}_4)_2\text{Cr}_2\text{O}_7$, 14%, and $\text{K}_2\text{Cr}_2\text{O}_7$, 3%, in addition to nitrocellulose.

T. Powder (French): Contains 2% KNO_3 in addition to nitrocellulose, CP_1 gelatinized with acetone.

S. Powder:† CP_1 , 37%; CP_2 , 28%; $\text{Ba}(\text{NO}_3)_2$, 29%; KNO_3 , 6%.

Rottweil Smokeless Powder (Shotgun): Insoluble nitrocellulose, 72.3%; soluble nitrocellulose, 24.5%; camphor and diphenylamine, 1%; H_2O , 1.5%; metallic nitrates, 0.7%.

Rottweil Smokeless Powder (Rifle): Insoluble nitrocellulose, 72.8%; soluble nitrocellulose, 25.0%; camphor and diphenylamine, 1%; H_2O , 1.2%.

Nitroglycerin Powders

Ballistite:‡ Guncotton, 50%; nitroglycerin, 49%; diphenylamine, 1%.

Ballistite, Norwegian: Guncotton, 50%; nitroglycerin, 40%; nitronaphthalene, 5%; diamyl phthalate, 5%.

Sporting Ballistite: Nitrocellulose, 60.5%; nitroglycerin, 39.5%.

Cordite Mk. I: Guncotton, 37%; nitroglycerin, 58%; mineral jelly, 5%; H_2O , 0.5%.

Cordite M. D.: Guncotton, 65%; nitroglycerin, 30%; mineral jelly, 5%; H_2O , 0.5%.

Cordite R. D. B.: Nitrocotton (N = 12.2%), 52%; nitroglycerin, 42%; mineral jelly, 6%.

* Fibrous 42% grain bulk.

† Partially gelatinized with ether-alcohol

‡ Gelatinized with acetone.

Nitroglycerine Powders with Additions

Köln-Rottweil TNT powder: Nitrocellulose, 61%; nitroglycerin, 20%; TNT, 15%; DNT, 3.5%; centralite, 0.5%.

Allestite: Nitrocellulose, 60%; nitroglycerin, 25%; DNT, 15%.

Austrian Flake Powder No. 1: Nitrocellulose, 36%; nitroglycerin, 36%; $\text{Ba}(\text{NO}_3)_2$, 18%; charcoal, 10%.

Austrian Flake Powder No. 2 (Graphited): Nitrocellulose, 40%; nitroglycerin, 40%; $\text{Ba}(\text{NO}_3)_2$, 20%.

Wetteren Smokeless Powder*: Nitrocellulose, insoluble, 16%, soluble, 46.2%; nitroglycerin, 27.3%; charcoal, 9%; H_2O , 1.5%.

In the application of propulsive explosives the nature of the weapon, the velocity of the projectile, and the maximum permissible pressure in the barrel are usually fixed, and the powder is modified in composition or physical properties to give the ballistics demanded.

The following table from an article by MacNab and Leighton (24) gives the heat of explosion and the volume and composition of the explosion gases for a number of sporting powders.

Properties of Some Sporting Powders (24)

Powder	Heat of explosion, g-cal/g	Permanant gases per g, cm^3	Water vapor per g, cm^3	Total volume of gas at 0°C and 760 mm, cm^3 per g	Composition of permanent gases, %				
					CO_2	CO	CH_4	H	N

Standard Ballistics for Shotgun Powders

A. TYPICAL AMERICAN STANDARD PROOF

Lead crushers are used, the Eley 1913 tables being employed to calculate the pressures from the remaining length.

The following are the average ballistics aimed at for various typical powders. They refer to matured powder containing 1½% moisture.

Charges	Velocity over 40 yards = V_{20} yd. or $V_{18.3}$ M	Pressure at 1 in. (2.54 cm) from base
Smokeless Shotgun		
3 drams powder = about 5.30 g. 1½ oz. = 31.89 g shot. 2½ in. flat base case.	875 ft./sec = 307.38 m/sec	3.5 ton/in. ² = 551.2 kg/cm ²
3½ drams powder = about 6.20 g. 1½ oz. = 35.44 g shot. 2¾ in. flat base case.	925 ft./sec = 282 m/sec	4¾ ton/in. ² = 748 kg/cm ²
E. C. and Schultze Powders		
3 dram charge = 5.30 g. 1½ oz. = 31.89 g shot. 2½ in. flat base cases.	870 ft./sec = 265.2 m/sec	
3½ drams charge = 6.20 g. 1½ oz. = 35.44 g shot. 2¾ in. flat base cases.	890 ft./sec = 271.3 m/sec	4.1–4.5 ton/in. ² = 645.7–718.7 kg/cm ²

* Gelatinized with rifle powders.

TYPICAL BRITISH STANDARD PROOF

Lead crushers are used, the Eley 1918 Tables being employed to calculate the pressures from the remaining length. Pressure: $2\frac{1}{2}$ –3 ton/in.² = 393.7–472.5 kg/cm.² Velocity over 20 yards = V_{10} yd. or $V_{9.15}$ m = 320–335 m/sec.

Charges Which Give Standard Ballistics

Powder	Caliber	Length of cartridge case		Powder charge, wt.		Shot charge, wt.	
		in.	mm	grains	g	ounces	g
Smokeless Diamond E. C. Empire in flat base cases, 3 drams = 33 grains	12	2 $\frac{3}{4}$	70	36	2.33	1 $\frac{1}{4}$	35.44
	12	2 $\frac{1}{2}$	65	33	2.14	1 $\frac{1}{8}$	30.12
	16	2 $\frac{3}{4}$	70	31	2.01	1	28.35
	16	2 $\frac{1}{2}$	65	28	1.81	$\frac{7}{8}$	24.81
Schultze Amberite in flat base cases, 3 drams = 42 grains	12	2 $\frac{3}{4}$	70	46	2.98	1 $\frac{1}{4}$	35.44
	12	2 $\frac{1}{2}$	65	42	2.72	1 $\frac{1}{8}$	30.12
	16	2 $\frac{3}{4}$	70	40	2.59	1 $\frac{1}{8}$	30.12
	16	2 $\frac{1}{2}$	65	36	2.53	$\frac{7}{8}$	24.81
Ballistite condensed powder in cone base cases	12	2 $\frac{3}{4}$	70	28	1.81	1 $\frac{1}{4}$	35.44
	12	2 $\frac{1}{2}$	65	25	1.62	1 $\frac{1}{8}$	30.12
	16	2 $\frac{3}{4}$	70	23	1.49	1	28.35
	16	2 $\frac{1}{2}$	65	21	1.36	$\frac{7}{8}$	24.81
Black powder in flat base cases, 3 drams = 84 grains	12	2 $\frac{3}{4}$	70	3 $\frac{1}{4}$	5.75	1 $\frac{1}{4}$	35.44
	12	2 $\frac{1}{2}$	65	3	5.30	1 $\frac{1}{8}$	31.89
	16	2 $\frac{3}{4}$	70	3	5.30	1	28.35
	16	2 $\frac{1}{2}$	65	2 $\frac{3}{4}$	4.87	$\frac{7}{8}$	24.81

The bulk density of the 33 grain powders is 375–385 g per liter.
The bulk density of the 42 grain powders is 475–485 g per liter.
The bulk density of Sporting Ballistite is 700–710 g per liter.

RIFLE POWDERS

For rifle powders there are no fixed standard ballistics such as have been established for shotgun powders. As an example some data are given for the 7 mm Mauser rifle.

7 mm Mauser Rifle

Powder	Powder charge, grains	Weight of bullet, grains	Muzzle velocity, ft./sec	Pressure
American Military Rifle powder (a)...	48	139	2900	Best burning pressure, 3515–3967 kg/cm ²
(b).....	42.5	139	2750	
	44.0	139	2900	
(c).....	36.9	175	2300	2109–3151 kg/cm ²
	40	175	2400	
	44	139	2786	
	45.5	139	2950	
(d).....	5.0	84	950	2320–2671 kg/cm ²
	8.0	120	1150	
				703–1055 kg/cm ²
				Pressure aimed at:
British Rifle Ne-	38	173	2300	17.5 ton/in. ²
onite.....	43	140	2800	19.5 ton/in. ²

ORDNANCE POWDER

Here also, as in the case of rifle powders, the ballistic values required are fixed in advance, and the powder is modified in composition, in size and shape of grain, or by coating to modify its rate of burning. Examples are given of ballistics for the 7.5 cm field gun.

7.5 cm Field Gun

Gun	Powder charge, kg	Weight of projectile, kg	Muzzle velocity, m/sec	Range, km
U. S. A., 75 mm (Model 1923)....		6.8	665	13.5
Switzerland.....		6.35	250–485	8.6
France.....		7.25 (shrapnel)	550	11
		7.98 (H. E. shell)		
Japan (Model 05)...	0.631	6.8 (shrapnel)	510	5.8
	0.631	6.4 (H. E. shell)		8.35

LITERATURE REFERENCES

LITERATURE REFERENCES

In all literature references cited in International Critical Tables the name of the journal or publication is indicated by means of a *Key number* corresponding to the list given below. The numbers which follow this key number in a literature citation are, in the order named: (1) the volume, (2) the page, and (3) the last two figures of the year. Thus 64V, 31: 253; 22, indicates Verslag koninklijke Akademie van Wetenschappen te Amsterdam, Vol. 31, page 253, 1922. Series numbers are not given. Key numbers referring to books and other non-serial publications are preceded by the letter *B*, and the volume number is given in roman numerals. Thus *B10*, IV: 191; 18, indicates Doelter, Handbuch der Mineralchemie, page 191 of Vol. 4 of the 1918 edition. The key number *O* is used to indicate "private communication from."

RÉFÉRENCES BIBLIOGRAPHIQUES

Le nom du journal ou de la publication de toutes les références bibliographiques citées dans les Tables Critiques Internationales est indiqué au moyen d'un *nombre-clé* correspondant à la liste donnée ci-dessous. Les nombres qui suivent ce nombre-clé dans un renvoi bibliographique indiquent dans l'ordre suivant: (1) le volume, (2) la page, et (3) les deux derniers chiffres de l'année. Ainsi 64V, 31: 253; 22, indique Verslag koninklijke Akademie van Wetenschappen te Amsterdam, Vol. 31, page 253, 1922. Les numéros des séries ne sont pas donnés. Les nombres-clés se rapportant à des livres ou à des publications non périodiques sont précédés de la lettre *B* et le numéro du volume est donné en chiffres romains. Ainsi *B10*, IV: 191; 18, indique Doelter, Handbuch der Mineralchemie, page 191 du volume 4 de l'édition de 1918. Le nombre-clé *O* est employé pour indiquer "communication privée de."

DAS LITERATURVERZEICHNIS

In allen Literaturstellen, die in I. C. T. verzeichnet sind, ist der Name der Zeitschrift oder der Publikation mit Hilfe einer *Schlüsselnummer*, entsprechend der unten folgenden Liste, angegeben. Die Zahlen, welche diesen Schlüsselnummern bei einem Literaturzitat folgen, bedeuten der Reihe nach: (1) der Band, (2) die Seite, und (3) die letzten zwei Zahlen des Jahrganges. So bedeutet z. B. 64V, 31: 253; 22, Verslag koninklijke Akademie van Wetenschappen te Amsterdam, Band 31, Seite 253, 1922. Seriennummern werden nicht angegeben. Der Schlüsselzahl wird ein *B* vorausgesetzt, wenn sie Bücher, oder eine andre nicht periodische Veröffentlichung bezeichnet. Die Bandnummer wird durch römische Ziffern angegeben. Es bedeutet z. B. also *B10*, IV: 191; 18, Doelter, Handbuch der Mineralchemie, Seite 191, des 4 Bandes, der Auflage des Jahres 1918. Die Schlüsselzahl *O* wird gebraucht, um anzuzeigen, dass es eine "private Mitteilung" ist.

INDICAZIONI BIBLIOGRAFICHE

In tutte le indicazioni bibliografiche che si incontrano nelle "Tabelle Critiche Internazionali" il nome del giornale o della pubblicazione è espresso con un *numero chiave* riportato nell'elenco dato più oltre. I numeri che, nella citazione, vengono dopo il numero chiave sono disposti con l'ordine seguente: (1) il volume, (2) la pagina, e (3) le ultime due cifre del millesimo. Così 64V, 31: 253; 22, indica la Verslag koninklijke Akademie van Wetenschappen te Amsterdam, Vol. 31, pagina 253, 1922. I numeri di serie non vengono dati. Quando un numero chiave è preceduto dalla lettera *B* si riferisce a libri o ad altre pubblicazioni non periodiche, e il numero del volume viene allora scritto in cifre romane. Così *B10*, IV: 191; 18, indica Doelter, Handbuch der Mineralchemie, pagina 191 del IV° volume dell'edizione 1918. Il numero chiave *O* indica "Comunicazione privata da . . ."

KEY TO THE PERIODICALS

Data regarding the libraries which receive many of these periodicals may be found through the following sources:

United States and Canada: "Periodicals Abstracted by Chemical Abstracts, 1926" (Chemical Abstracts, Ohio State Univ., Columbus, Ohio); "Union List of Serials in the Libraries of the United States and Canada, 1927" (H. W. Wilson & Co., New York City); "A Catalogue of Scientific Periodicals in Canadian Libraries, 1924" (McGill Univ., Montreal, Canada).

Great Britain: "A World List of Scientific Periodicals Published in the Years 1900-1921" (Oxford Univ. Press, London, 1925-1927).

Holland: "Chemisch Jaarboekje tevens Jaarboekje der Nederlandsche Chemische Vereeniging, Vol. 3." (Amsterdam, D. B. Centen, 1920).
